What’s Your Social Network?

Lawrence Snyder
University of Washington, Seattle
“Hello, World” – it’s the WORLD Wide Web

Mostly we think of our small circle of friends & organizations when we’re online ... but really the whole world has access

And, to some degree, we’re anonymous

So ... we can behave however we like, right?
“Hello, World” – it’s the **WORLD** Wide Web

Mostly we think of our small circle of friends & organizations when we’re online ... but really the whole world has access

And, to some degree, we’re anonymous

So ... we can behave however we like, right?

**NOT**
“Offensensitivity”
“Offensensitivity”
“Offensensitivity”
“Offensensitivity”
“Offensensitivity”

- A good guideline for online behavior is [www.css-discuss.org/policies.html#offensensitivity](http://www.css-discuss.org/policies.html#offensensitivity)
- Key points – when writing in online discussion
  - Thousands of people will see it
    - You can easily and unintentionally offend them
    - They can easily and unintentionally offend you
  - The collision comes from different cultures, social norms, backgrounds, assumptions, religions ...
    - You’re not wrong; they’re not wrong ... just different
    - They’re no more likely to change their thinking than you
  - Tolerance, open-mindedness, patience needed
Posting Audio/Video Online

- In preparation for our discussion of privacy, take a look at important past examples of online posting ....
Two Familiar Past Videos

- Star Wars Kid
  - A/K/A Ghyslain Raza
    http://www.youtube.com/watch?v=HPPj6vilBmU

- Numa Numa Guy
  - A/K/A Gary Brolsma
    http://www.youtube.com/watch?v=60og9gwKh1o
A Serious Recent Case

- Tyler Clementi, a Rutgers student whose roommate recorded him during a sexual encounter and uploaded it to the Internet
  - Result: Clementi jumped off of bridge
- A terrific article analyzing it
  - [http://www.newyorker.com/reporting/2012/02/06/120206fa_fact_parker](http://www.newyorker.com/reporting/2012/02/06/120206fa_fact_parker)
These are serious cases

Is there any case that can justify distributing surreptitiously obtained recordings?

“surreptitious”: obtained, made, etc., by stealth; secret or unauthorized

for us, information taken without knowledge of creator

Privacy: A Definition

- **Privacy**: The right of people to choose freely under what circumstances and to what extent they will reveal themselves, their attitude, and their behavior to others.
  - It’s a human right – explicit in many countries
  - **You** do the revealing, no one else
  - You can’t live like a hermit; you must reveal
  - With strong privacy protections – the US has almost none – it’s OK to reveal, because the receivers of the information must keep it private
Justice Louis Brandeis

The narrower doctrine [of illegal search] may have satisfied the demands of society at a time when the abuse to be guarded against could rarely have arisen without violating a contract or a special confidence; but now that modern devices afford abundant opportunities for the perpetration of such wrongs without any participation of the injured party, the protection granted by the law must be placed upon a broader foundation.

The narrower doctrine [of illegal search] may have satisfied the demands of society at a time when the abuse to be guarded against could rarely have arisen without violating a contract or a special confidence; but now that modern devices afford abundant opportunities for the perpetration of such wrongs without any participation of the injured party, the protection granted by the law must be placed upon a broader foundation.
Are You Pregnant?

- Target data mines customers and can figure out the likelihood a woman is pregnant [NYT]
Are You Pregnant?

- Target data mines customers and can figure out the likelihood a woman is pregnant [NYT]

What Target discovered fairly quickly is that it creeped people out that the company knew about their pregnancies in advance.

“If we send someone a catalog and say, ‘Congratulations on your first child!’ and they’ve never told us they’re pregnant, that’s going to make some people uncomfortable,” Pole said. “We are very conservative about compliance with all privacy laws. But even if you’re following the law, you can do things where people get queasy.”
For our online social problems one thing we cannot blame is the technology ... it’s neutral

OECD Fair Information Practices:
- **Limited Collection**
  There should be limits to the personal data collected; data should be collected by fair and lawful means, and with the knowledge and consent of the person whenever possible.
- **Purpose**
  The purposes for collecting personal data should be stated when it is collected; the uses should be limited to those purposes.
- **Quality**
  The data should be relevant to the purpose of collection; it should be accurate, complete, and up-to-date.
Fair Practices (Continued)

- **Use Limitation**
  Personal data should not be disclosed or used for purposes other than stated in the Purpose Principle, except with the consent of the individual or by the authority of law.

- **Security**
  Personal data should be protected by reasonable security measures against risks of disclosure, unauthorized access, misuse, modification, destruction, or loss.

- **Openness**
  There should be general openness of policies and practices about personal data collection, making it possible to know of its existence, kind, and purpose of use, as well as the contact information for the data controller.

- **Participation**
  An individual should be able to (a) determine if the data controller has information about him or her, and (b) discover what it is. If the request is denied, the individual should be allowed to challenge the denial.

- **Accountability**
  The data controller should be accountable for complying with these principles.
What Can You Do?

- Lobby for better privacy controls – Most developed nations have **strong** privacy laws
- EU, CA, AU, HK, NZ, CH, ...
- The US? Very, very limited, because ...

- **ALWAYS** pay attention to privacy settings
What Do You Reveal? Self-inflicted

- Even though we do the “revealing” we may be wise not to reveal “all”
- People have lost jobs based over FB posts
- The problem FB and Tweeter, etc. are widely accessed
  - Grandmother (a FB user, too!), HR department, etc.
- Because of technical considerations, the info is not likely to go away ... even if you try deleting
When you look for a job, HR will probably check
When people first meet you (a potential love interest, say), he/she will almost always check you out … what image do you want to present?
You’re not really anonymous after all

Guidelines: Watch posts about behavior, schedule, biases, employer, and drama in your life
Guidelines – Think Twice About …

- Behavior – text or photos on socially unacceptable behavior has cost people jobs
- Schedule – posting or tweeting where you are not – “Off to Hawaii” – is direct help to burglars
- Biases – “hating” others is easy enough to do, but is that how you want your public image?
- The boss may follow your thoughts on your job
- Drama – the drama in our lives often consumes us; it’s hard not to tweet or post about it, but it often reveals information about others
Two Familiar Past Videos

- Star Wars Kid
  - A/K/A Ghyslain Raza
  - In law school; prez of restoration society

- Numa Numa Guy
  - A/K/A Gary Brolsma
  - Has his own Youtube music channel; performed at football game
“Do Not Track”

- Tracking means browsers – Chrome, Safari, Internet Explorer, Firefox, ... – send info about your browsing behavior (sites you’re visiting, what you clicked on) back to 3rd parties (marketing, advertising groups, anyone else)
- If that’s OK, do nothing; If that’s not OK –
  - Use Firefox always; avoiding tracking is easy
  - Set “do not track” flag: preferences > security
Copyrights

- Protecting your info is not the only problem
- How you use other people’s work is one, too.

- Intellectual property is something produced by one’s intellect: art, novels, photos, music, poetry, performances, software, textbooks
- Making a copy of the work for sale or distribution is the right of the creator
  - YOU are the creator of all you create (if not at work)
  - It is illegal to copy someone’s creation for “other than personal use”
WWW Makes Copyright Issues Worse

- “Music and videos” are widely stolen
- Most people who have posted to the WWW have probably violated copyright laws
- Owners must “defend” their copyrights, making it a very uncomfortable situation
  - RIAA and MPAA are a war with users
  - Congress, without understanding what it’s doing, nearly passed
    - SOPA – Stop Online Piracy Act
    - PIPA – Protect Intellectual Property Act
- The situation is busted
One Bright Spot

- The Creative Commons allows rights holders to share them while keeping those the want

**ATTRIBUTION:** Others are to allowed copy, distribute, perform, etc. work, as well as create other work based on it, and you get credit for it.

**NONCOMMERCIAL:** Others are allowed to copy, distributed, perform, etc. work, as well as create other work based on it, as long as the result is not for sale.

**NO DERIVATIVE WORK:** Others are allowed to copy, distributed, perform, etc. work, as long as those are verbatim; no derivative works can be created from it.

**SHARE ALIKE:** Others are allowed to distribute derivative works only under a license identical the one governing your work.
