CSE 154: CSE 154 Web Programming   Spring 2017

Section 3: Basic JavaScript   Due Date: Tuesday, April 11

Directions: Solve the following problem on paper (or solve on the computer and print out your solution) and bring it to your section on Tuesday.

0. vowelCount

Write a JavaScript function named `vowelCount` that accepts a `string` and returns the number of vowels it contains.

For example, the call of `vowelCount(``kookaburra'')` should return 5 (two o's, two a's, and one u). When passed a `string` without any vowels (such as an empty String, "01234", or "sky"), 0 should be returned.
