
Section 8: SQL**Due Date:** Tuesday, May 16**0. Around the World**

1. Write a query in SQL that displays the names and independence years of all countries in Africa that gained their independence in 1970 or later, sorted by name in alphabetical order. Display the country names and independence years only, not other information about these countries. (If you got the answer right, you should see 11 countries, from Angola to Zimbabwe.)
2. Write a query in SQL that displays the names and populations of all cities in Canada that have a population between 200,000 and 600,000. Display the city names and populations only, not other information about those cities. (If you got the right answer, you should see 10 cities, including Scarborough and Windsor.)

You can develop your queries using the following query tester page: [Webster SQL Query Tester](#).
