

Section 1

Review

- 1) **Sum rule.** If you can choose from EITHER one of n options, OR one of m options with NO overlap with the previous n , then the number of possible outcomes of the experiment is _____.
- 2) **Product rule.** In a sequential process with m steps, if there are n_1 choices for the 1st step, n_2 choices for the 2nd step (given the first choice), ..., and n_m choices for the m th step (given the previous choices), then the total number of outcomes is _____.
- 3) **Permutations.** The number of ways to order n distinct elements is _____.
- 4) **k -permutations.** The number of ways to choose a sequence of k distinct elements from a set of n elements is _____.
- 5) **Subsets.** The number of ways to choose a k -element subset of a set of n elements is _____.
- 6) **Set difference.** Is it always true that $|A \setminus B| = |A| - |B|$?
- 7) **Complementary counting.** If asked to find the number of ways to do X, you can: find the _____ number of ways and then subtract the number of ways to _____.

The rest of these will be covered in class on January 5 or January 8.

- 8) **Binomial theorem.** $\forall x, y \in \mathbb{R}, \forall n \in \mathbb{N}: (x + y)^n = \sum_{k=0}^n \binom{n}{k} x^k y^{n-k}$
- 9) **Inclusion-exclusion.** $|A \cup B| = |A| + |B| - |A \cap B|$.
- 10) **Inclusion-exclusion.** $|A \cup B \cup C| = |A| + |B| + |C| - |A \cap B| - |A \cap C| - |B \cap C| + |A \cap B \cap C|$.
- 11) **Multinomial coefficients.** Suppose there are n objects, but only k are distinct, with $k \leq n$. (For example, "godoggy" has $n = 7$ objects (characters) but only $k = 4$ are distinct: (g, o, d, y)). Let n_i be the number of times object i appears, for $i \in \{1, 2, \dots, k\}$. (For example, $(3, 2, 1, 1)$, continuing the "godoggy" example.) The number of distinct ways to arrange the n objects is: _____.

Task 1 – Sets

- a) For each one of the following sets, give its **cardinality**, i.e., indicate how many elements it contains:
 - $A = \emptyset$
 - $B = \{\emptyset\}$
 - $C = \{\{\emptyset\}\}$
 - $D = \{\emptyset, \{\emptyset\}\}$
- b) Let $S = \{a, b, c\}$ and $T = \{c, d\}$. Compute:

$$- S \cup T$$

$$- S \cap T$$

$$- S \setminus T$$

$$- 2^{S \setminus T}$$

$$- S \times T$$

Task 2 – Basic Counting

- a) Credit-card numbers are made of 15 decimal digits, and a 16th checksum digit (which is uniquely determined by the first 15 digits). How many credit-card numbers are there?
- b) How many positive divisors does $1440 = 2^5 3^2 5$ have?
- c) How many ways are there to arrange the CSE 312 staff on a line (11 TAs, two professors) for a group picture?
- d) How many ways are there to arrange the CSE 312 staff on a line so that Professors Tessaro and Beame are at the two ends of the line?

Task 3 – Seating

How many ways are there to seat 10 people, consisting of 5 couples, in a row of 10 seats if ...

- a) ... all couples are to get adjacent seats?
- b) ... anyone can sit anywhere, except that one couple insists on *not* sitting in adjacent seats?

Task 4 – Weird Card Game

In how many ways can a pack of fifty-two cards (in four suits of thirteen cards each) be dealt to thirteen players, four to each, so that every player has one card from each of the suits?

Task 5 – Full Class

There are 40 seats and 40 students in a classroom. Suppose that the front row contains 10 seats, and there are 5 students who must sit in the front row in order to see the board clearly. How many seating arrangements are possible with this restriction?

Task 6 – Escape the Professor

There are 6 security professors and 7 theory professors taking part in an escape room. The solution requires that they choose 4 pairs, each consisting of one security professor and one theory professor. How many options for pairings do they have?

Task 7 – Lizards and Snakes!

Loudon has three pet lizards (Rango, a gecko named Gordon, and a goanna named Joanna) as well as two small pet snakes (Kaa and Basilisk) but only 4 terrariums to put them in. In how many different ways can he put his 5 pets in these 4 terrariums so that no terrarium has both a snake and a lizard?

Task 8 – Birthday Cake

A chef is preparing desserts for the week, starting on a Sunday. On each day, only one of five desserts (apple pie, cherry pie, strawberry pie, pineapple pie, and cake) may be served. On Thursday there is a birthday, so cake must be served that day. On no two consecutive days can the chef serve the same dessert. How many dessert menus are there for the week?

Task 9 – Photographs

Suppose that 8 people, including you and a friend, line up for a picture. In how many ways can the photographer organize the line if she wants to have fewer than 2 people between you and your friend?

Task 10 – Extended Family Portrait

A group of n families, each with m members, are to be lined up for a photograph. In how many ways can the nm people be arranged if members of a family must stay together?

The material for the following questions has not yet been covered in lecture, but you may find them useful references for the homework.

Task 11 – HBCDEFGA

How many ways are there to permute the 8 letters A, B, C, D, E, F, G, H so that A is not at the beginning and H is not at the end?

Task 12 – Binomial Theorem

What is the coefficient of z^{36} in $(-2x^2yz^3 + 5uv)^{312}$?

Task 13 – Multinomial Coefficients

How many ways can we arrange the letters in 'TEDDYBEAR'?
