Final review
Stronger vs Weaker (one more time!)

• Requires more?

• Promises more? (stricter specifications on what the effects entail)
Stronger vs Weaker (one more time!)

• Requires more?
  weaker

• Promises more? (stricter specifications on what the effects entail)
  stronger
Stronger vs Weaker

@requires key is a key in this
@return the value associated with key
@throws NullPointerException if key is null

A. @requires key is a key in this and key != null
   @return the value associated with key
B. @return the value associated with key if key is a key in this, or null if key is not associated with any value
C. @return the value associated with key
   @throws NoSuchElementException if key is not a key in this
   @throws NoSuchElementException if key is not a key in this

Stronger vs Weaker

A. requires key is a key in this and key != null
   @return the value associated with key WEAKER
B. @return the value associated with key if key is a key in this, or null if key is not associated with any value NEITHER
C. @return the value associated with key
   @throws NullPointerException if key is null
   @throws NoSuchElementException if key is not a key this STRONGER
Subtypes & Subclasses

- Subtypes are substitutable for supertypes
- If Foo is a subtype of Bar, G<Foo> is a **NOT** a subtype of G<Bar>
  - Aliasing resulting from this would let you add objects of type Bar to G<Foo>, which would be bad!
- Example:
  ```java
  List<String> ls = new ArrayList<String>();
  List<Object> lo = ls;
  lo.add(new Object());
  String s = ls.get(0);
  ```
- Subclassing is done to reuse code (extends)
  - A subclass can override methods in its superclass
Typing and Generics

• <?> is a wildcard for unknown
  • Upper bounded wildcard: type is wildcard or subclass
    • Eg: List<? extends Shape>
    • Illegal to write into (no calls to add!) because we can’t guarantee type safety.
  • Lower bounded wildcard: type is wildcard or superclass
    • Eg: List<? super Integer>
    • May be safe to write into.
Subtypes & Subclasses

class Student extends Object { ... }
class CSEStudent extends Student { ... }

List<Student> ls;
List<? extends Student> les;
List<? super Student> lss;
List<CSEStudent> lcse;
List<? extends CSEStudent> lecse;
List<? super CSEStudent> lscse;
Student scholar;
CSEStudent hacker;

ls = lcse;
les = lscse;
lcse = lscse;
les.add(scholar);
lscse.add(scholar);
lss.add(hacker);
scholar = lscse.get(0);
hacker = lecse.get(0);
Subtypes & Subclasses

class Student extends Object { ... }
class CSEStudent extends Student { ... }

List<Student> ls;
List<? extends Student> les;
List<? super Student> lss;
List<CSEStudent> lcse;
List<? extends CSEStudent> lecse;
List<? super CSEStudent> lscse;

Student scholar;
CSEStudent hacker;

ls = lcse;  // X
les = lscse;  // X
lcse = lscse;  // X
lecse.add(scholar);  // X
lscse.add(scholar);  // X
lss.add(hacker);  // ✓
scholar = lscse.get(0);  // X
hacker = lecse.get(0);  // ✓
Subclasses & Overriding

class Foo extends Object {
    Shoe m(Shoe x, Shoe y){ ... }
}

class Bar extends Foo {...}
Method Declarations in Bar

- FootWear m(Shoe x, Shoe y) { ... }
- Shoe m(Shoe q, Shoe z) { ... }
- HighHeeledShoe m(Shoe x, Shoe y) { ... }
- Shoe m(FootWear x, HighHeeledShoe y) { ... }
- Shoe m(FootWear x, FootWear y) { ... }
- Shoe m(Shoe x, Shoe y) { ... }
- Shoe m(HighHeeledShoe x, HighHeeledShoe y) { ... }
- Shoe m(Shoe y) { ... }
- Shoe z(Shoe x, Shoe y) { ... }
Method Declarations in Bar

<table>
<thead>
<tr>
<th>Method Declaration</th>
<th>Object</th>
<th>Footwear</th>
</tr>
</thead>
<tbody>
<tr>
<td>FootWear m(Shoe x, Shoe y) { ... }</td>
<td>Foo</td>
<td>Shoe</td>
</tr>
<tr>
<td>Shoe m(Shoe q, Shoe z) { ... }</td>
<td>Bar</td>
<td>HighHeeledShoe</td>
</tr>
<tr>
<td>HighHeeledShoe m(Shoe x, Shoe y) { ... }</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shoe m(FootWear x, HighHeeledShoe y) { ... }</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shoe m(FootWear x, FootWear y) { ... }</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shoe m(Shoe x, Shoe y) { ... }</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shoe m(HighHeeledShoe x, HighHeeledShoe y) { ... }</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shoe m(Shoe y) { ... }</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Shoe z(Shoe x, Shoe y) { ... }</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

- The result is method overriding
- The result is method overloading
- The result is a type-error
- None of the above

- FootWear m(Shoe x, Shoe y) { ... } type-error
- Shoe m(Shoe q, Shoe z) { ... } overriding
- HighHeeledShoe m(Shoe x, Shoe y) { ... } overriding
- Shoe m(FootWear x, HighHeeledShoe y) { ... } overloading
- Shoe m(FootWear x, FootWear y) { ... } overloading
- Shoe m(Shoe x, Shoe y) { ... } overriding
- Shoe m(HighHeeledShoe x, HighHeeledShoe y) { ... } overloading
- Shoe m(Shoe y) { ... } overloading
- Shoe z(Shoe x, Shoe y) { ... } none (new method declaration)
Design Patterns

• Creational patterns: get around Java constructor inflexibility
  • Sharing: singleton, interning
  • Telescoping constructor fix: builder
  • Returning a subtype: factories
• Structural patterns: translate between interfaces
  • Adapter: same functionality, different interface
  • Decorator: different functionality, same interface
  • Proxy: same functionality, same interface, restrict access
  • All of these are types of wrappers
Design Patterns

• Interpreter pattern:
  • Collects code for similar objects, spreads apart code for operations (classes for objects with operations as methods in each class)
  • Easy to add objects, hard to add methods
  • Instance of Composite pattern

• Procedural patterns:
  • Collects code for similar operations, spreads apart code for objects (classes for operations, method for each operand type)
  • Easy to add methods, hard to add objects
  • Ex: Visitor pattern
Design Patterns

- Adapter, Builder, Composite, Decorator, Factory, Flyweight, Iterator, Intern, Interpreter, Model-View-Controller (MVC), Observer, Procedural, Prototype, Proxy, Singleton, Visitor, Wrapper

- What pattern would you use to...
  - add a scroll bar to an existing window object in Swing
  - We have an existing object that controls a communications channel. We would like to provide the same interface to clients but transmit and receive encrypted data over the existing channel.
  - When the user clicks the “find path” button in the Campus Maps application (hw9), the path appears on the screen.
