The Hardware/Software Interface
CSE351 Winter 2014

Instructor:
Mark Oskin

Teaching Assistants:
Matthew Dorsett, Benjamin Du, Whitney Schmidt, Mark Wyse
FAQ

- If you are not officially enrolled, do not worry
Who are you?

- More or less 60
- 20% non-major, 80 major
- 20% CE / 80 CS
- Chicago, India, China, Mexico, Israel, DC
Mark Oskin
The Hardware/Software Interface

- What is hardware? software?

- What is an interface?

- Why do we need a hardware/software interface?

- Why do we need to understand both sides of this interface?
A new era: this class is all online (sort-a)

What is this class about?

- What is hardware? software?
- What is a hardware/software interface?
- Why do we need to understand this interface?
IDEA: Intro / Discuss / Explore Advanced

- More or less on a weekly basis we’ll cycle through a set of types of days
- Introduction
  - Intro / Overview / precise roadmap of what to watch
- Discussion
  - By this time you’ve reviewed the on-line lectures and you we’ll talk about the concepts and assist you with the homework and labs
- Exploration & Advanced topics
  - We’ll venture off into advanced topics on the same material covered that week. Possibly some additional reading material will be required.
With great power comes great responsibility...

- By moving to this hybrid lecture format, you will get the following benefits:
  - You get to learn more! Seriously, you are here to learn right? You’re paying for this education, so let’s see how far we can go together!
  - You get to learn the basics at a pace better suited for you and at a time and place better suited for you.
  - Ostensibly you can miss a ‘D’ day and it won’t harm your ability to follow along in class one bit. You could also miss an ‘I’ day but my goal with ‘I’ days is to make the time so super useful for you that you find it saves you time to come to class.

- But you will hate this class – fast – if you don’t do your part
  - *Actually* watch the videos, and preferably before the D day lecture.
  - Come to the EA, yes it’s part of the class and you are tested on it
Quick Announcements

- **Website:** [cs.uw.edu/351](http://cs.uw.edu/351)
- Section information to be updated soon...
- Lab 0 Will be released today, due next Monday
  - Basic exercises to start getting familiar with C
  - Credit/no-credit
- **NO LECTURE 1/13 – I’m in Washington DC**
C/Java, assembly, and machine code

```c
if (x != 0) y = (y+z)/x;
```

```assembly
    cmpl $0, -4(%ebp)
    je .L2
    movl -12(%ebp), %eax
    movl -8(%ebp), %edx
    leal (%edx, %eax), %eax
    movl %eax, %edx
    sarl $31, %edx
    idivl -4(%ebp)
    movl %eax, -8(%ebp)
.L2:
```

Winter 2014

Introduction
C/Java, assembly, and machine code

```
if (x != 0) y = (y+z)/x;
```

The three program fragments are equivalent

You'd rather write C! - a more human-friendly language

The hardware likes bit strings! - everything is voltages
  - The machine instructions are actually much shorter than the number of bits we would need to represent the characters in the assembly language
**HW/SW Interface: The Historical Perspective**

- **Hardware started out quite primitive**
  - Hardware designs were expensive ⇒ instructions had to be very simple – e.g., a single instruction for adding two integers

- **Software was also very basic**
  - Software primitives reflected the hardware pretty closely
Life was made a lot better by assemblers

- 1 assembly instruction = 1 machine instruction, but...
- different syntax: assembly instructions are character strings, not bit strings, a lot easier to read/write by humans
- can use symbolic names
Higher level of abstraction:
- 1 line of a high-level language is compiled into many (sometimes very many) lines of assembly language
HW/SW Interface: Code / Compile / Run Times

Note: The compiler and assembler are just programs, developed using this same process.
Outline for today

- Course themes: big and little
- Roadmap of course topics
- Three important realities
- How the course fits into the CSE curriculum
- Logistics
The Big Theme: Interfaces and Abstractions

- Computing is about abstractions
  - (but we can’t forget reality)
- What are the abstractions that we use?
- What do YOU need to know about them?
  - When do they break down and you have to peek under the hood?
  - What bugs can they cause and how do you find them?
- How does the hardware (0s and 1s, processor executing instructions) relate to the software (C/Java programs)?
  - Become a better programmer and begin to understand the important concepts that have evolved in building ever more complex computer systems
C:

```c
car *c = malloc(sizeof(car));  
c->miles = 100;  
c->gals = 17;  
float mpg = get_mpg(c);  
free(c);
```

Java:

```java
Car c = new Car();  
c.setMiles(100);  
c.setGals(17);  
float mpg = c.getMPG();
```

Assembly language:

```
get_mpg:  
    pushq   %rbp  
    movq    %rsp, %rbp  
    ...  
    popq    %rbp  
    ret
```

Machine code:

```
0111010000110000  
1000110100000100  
1000100111000010  
110000011111101000001111
```

Computer system:

OS:

- Windows 8
- Mac

Memory & data

- Integers & floats
- Machine code & C
- x86 assembly
- Procedures & stacks
- Arrays & structs
- Memory & caches
- Processes
- Virtual memory
- Memory allocation
- Java vs. C
Little Theme 1: Representation

- All digital systems represent everything as 0s and 1s
  - The 0 and 1 are really two different voltage ranges in the wires

- “Everything” includes:
  - Numbers – integers and floating point
  - Characters – the building blocks of strings
  - Instructions – the directives to the CPU that make up a program
  - Pointers – addresses of data objects stored away in memory

- These encodings are stored throughout a computer system
  - In registers, caches, memories, disks, etc.

- They all need addresses
  - A way to find them
  - Find a new place to put a new item
  - Reclaim the place in memory when data no longer needed
Little Theme 2: Translation

- There is a big gap between how we think about programs and data and the 0s and 1s of computers

- Need languages to describe what we mean

- Languages need to be translated one step at a time
  - Words, phrases and grammars

- We know Java as a programming language
  - Have to work our way down to the 0s and 1s of computers
  - Try not to lose anything in translation!
  - We’ll encounter Java byte-codes, C language, assembly language, and machine code (for the X86 family of CPU architectures)
Little Theme 3: Control Flow

- How do computers orchestrate the many things they are doing?

- In one program:
  - How do we implement if/else, loops, switches?
  - What do we have to keep track of when we call a procedure, and then another, and then another, and so on?
  - How do we know what to do upon “return”?

- Across programs and operating systems:
  - Multiple user programs
  - Operating system has to orchestrate them all
    - Each gets a share of computing cycles
    - They may need to share system resources (memory, I/O, disks)
  - Yielding and taking control of the processor
    - Voluntary or “by force”?
Course Outcomes

- **Foundation**: basics of high-level programming (Java)

- Understanding of some of the abstractions that exist between programs and the hardware they run on, why they exist, and how they build upon each other

- Knowledge of some of the details of underlying implementations

- **Become more effective programmers**
  - More efficient at finding and eliminating bugs
  - Understand some of the many factors that influence program performance
  - Facility with a couple more of the many languages that we use to describe programs and data

- **Prepare for later classes in CSE**
CSE351’s role in the CSE Curriculum

- **Pre-requisites**
  - 142 and 143: Intro Programming I and II
  - Also recommended: 390A: System and Software Tools

- **One of 6 core courses**
  - 311: Foundations of Computing I
  - 312: Foundations of Computing II
  - 331: SW Design and Implementation
  - 332: Data Abstractions
  - 351: HW/SW Interface
  - 352: HW Design and Implementation

- **351 provides the context for many follow-on courses.**
CSE351’s place in the CSE Curriculum

The HW/SW Interface: underlying principles linking hardware and software

CSE351

CSE477/481/490/etc. Capstone and Project Courses

CSE352 HW Design
CSE333 Systems Prog
CSE451 Op Systems
CSE401 Compilers
CSE461 Networks
CSE484 Security
CSE466 Emb Systems

Performance
Concurrency
Comp. Arch.

Distributed Systems
Execution Model
Real-Time Control

Machine Code

CS 143 Intro Prog II
Course Perspective

This course will make you a better programmer.

- Purpose is to show how software really works
- By understanding the underlying system, one can be more effective as a programmer.
  - Better debugging
  - Better basis for evaluating performance
  - How multiple activities work in concert (e.g., OS and user programs)
- Not just a course for dedicated hackers
  - What every CSE major needs to know
  - Job interviewers love to ask questions from 351!
- Provide a context in which to place the other CSE courses you’ll take
Textbooks

- **Computer Systems: A Programmer’s Perspective, 2nd Edition**
  - Randal E. Bryant and David R. O’Hallaron
  - Prentice-Hall, 2010
  - [http://csapp.cs.cmu.edu](http://csapp.cs.cmu.edu)
  - This book really matters for the course!
    - How to solve labs
    - Practice problems typical of exam problems

- **A good C book – any will do**
  - The C Programming Language (Kernighan and Ritchie)
  - C: A Reference Manual (Harbison and Steele)
Course Components

- **Online lectures**
  - Course videos (courtesy of Gaetano and Luis)
  - Written homework assignments (4)
  - Mostly problems from text to solidify understanding

- **Labs (5, plus “lab 0”)**
  - Provide in-depth understanding (via practice) of an aspect of system

- **Exams (midterm + final)**
  - Test your understanding of concepts and principles
  - Final exam is scheduled for March 19th 2:30 – 4:20 here!
Resources

■ Course web page: cse.uw.edu/351
  ▪ Schedule, policies, labs, homeworks, and everything else

■ Course discussion board
  ▪ Keep in touch outside of class – help each other
  ▪ Staff will monitor and contribute

■ Course mailing list – check your @uw.edu
  ▪ Low traffic – mostly announcements; you are already subscribed

■ Office hours – mine are by appt. Txt 206-293-9456

■ Staff e-mail: cse351-staff@cse.uw.edu
  ▪ Things that are not appropriate for discussion board or better offline

■ Anonymous feedback
  ▪ Any comments about anything related to the course where you would feel better not attaching your name; however, I really don’t take anything personally and much prefer non-anonymous feedback because then we can have a dialogue on how to make things better, not just a datapoint that says something is wrong.
Policies: Grading

- Exams (40%): 15% midterm, 25% final
- Written assignments (20%): weighted according to effort
  - We’ll try to make these about the same
- Lab assignments (40%): weighted according to effort
  - These will likely increase in weight as the quarter progresses

Late days:
- You can turn in anything 2 days late if you write an excuse, formatted as a Haiku and email it on or before the original due date. This applies to anything due before the final day of class.

Collaboration:
- [http://www.cse.uw.edu/education/courses/cse351/13au/policies.html](http://www.cse.uw.edu/education/courses/cse351/13au/policies.html)
- [http://www.cse.uw.edu/students/policies/misconduct](http://www.cse.uw.edu/students/policies/misconduct)
Other details

- Consider taking CSE 390A, 1 credit, useful skills
- Lab 0 due Monday 5pm.
  - On the website
  - Non-majors: should be able to work without CSE accounts, but ...
  - Install CSE home VM
  - Thursday section on C and tools
Near term

- Today: Class overview
- Wednesday: (I day): Memory, data and addressing & numbers
- Friday: (D day): Discussion/HW/Lab assistance
- Monday: -- Canceled – I’m in Washington DC working for d’man
- Wednesday: (EA day) – history of memory / data + GPU + technology changes in memory/architecture
Videos to watch

- Memory, Data, addressing
  - 1-6 (takes about an hour)

- Number representation
  - 7-14 (takes about an hour)

Welcome to CSE351 – Hybrid Ediction!

- Let’s have fun – there’s time to
- Let’s learn – together
- Let’s communicate – don’t be a deer in the headlights!
- Let’s make our in-class time more productive through hybrid education, not less.

- Many thanks to Gaetano and Luis for spending an enormous amount of time last year recording themselves.
