### The P versus NP problem

Is one of the biggest open problems in computer science (and mathematics) today

It's currently unknown whether there exist polynomial time algorithms for NP-complete problems

- That is, does  $P = NP$ ?
- People generally believe  $P \neq NP$ , but no proof yet

But what is the P-NP problem?

### Sudoku

2	3	8	5
5	4	9	8
8	9	7	3
6	7	9	
9	8		1
3	1	9	7
4	6	5	2
2	9	3	1

**$n \times n \times n$**

Suppose you have an algorithm  $S(n)$  to solve  $n \times n \times n$

$V(n)$  time to verify the solution  
Fact:  $V(n) = O(n^2 \times n^2)$

Question: is there some constant such that  $S(n) = O(n^{\text{constant}})$ ?

Winter 2016 CSE 373: Data Structures & Algorithms 8

2	3	8	5
5	4	9	8
8	9	7	3
6	7	9	
9	8		1
3	1	9	7
4	6	5	2
2	9	3	1

**P vs NP problem**

=

Does there exist an algorithm for solving  $n \times n \times n$  Sudoku that runs in time  $p(n)$  for some polynomial  $p()$  ?

**$n \times n \times n$**

Winter 2016 CSE 373: Data Structures & Algorithms 9

### The P versus NP problem (informally)

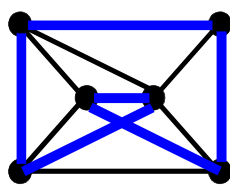

Is finding an answer to a problem **much** more difficult than verifying an answer to a problem?

Winter 2016 CSE 373: Data Structures & Algorithms 10

### Hamiltonian Cycle

Given a graph  $G = (V,E)$ , is there a cycle that visits all the nodes exactly once?

YES if  $G$  has a Hamiltonian cycle  
NO if  $G$  has no Hamiltonian cycle

**The Set "HAM"**

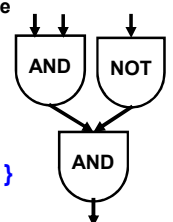

$HAM = \{ \text{graph } G \mid G \text{ has a Hamiltonian cycle} \}$

Winter 2016 CSE 373: Data Structures & Algorithms 11

### Circuit-Satisfiability

Input: A circuit  $C$  with one output

Output: YES if  $C$  is satisfiable  
NO if  $C$  is not satisfiable

**The Set "SAT"**

$SAT = \{ \text{all satisfiable circuits } C \}$

Winter 2016 CSE 373: Data Structures & Algorithms 12

### Sudoku

**Input:**  $n \times n \times n$  sudoku instance

**Output:** YES if this sudoku has a solution  
NO if it does not

**The Set "SUDOKU"**

**SUDOKU = { All solvable Sudoku instances }**

Winter 2016 CSE 373: Data Structures & Algorithms 13

## Polynomial Time and The Class "P"

Winter 2016 CSE 373: Data Structures & Algorithms 14

### What is an efficient algorithm?

Is an  $O(n)$  algorithm efficient?

How about  $O(n \log n)$ ?

$O(n^2)$  ?

$O(n^{10})$  ?

---

$O(n^{\log n})$  ?

$O(2^n)$  ?

$O(n!)$  ?

} polynomial time

}  $O(n^c)$  for some constant  $c$

} non-polynomial time

Winter 2016 CSE 373: Data Structures & Algorithms 15

### What is an efficient algorithm?

Does an algorithm running in  $O(n^{100})$  time count as efficient?

Asking for a poly-time algorithm for a problem sets a (very) low bar when asking for efficient algorithms.

We consider **non-polynomial** time algorithms to be **inefficient**.

And hence a **necessary** condition for an algorithm to be efficient is that it should run in poly-time.

Winter 2016 CSE 373: Data Structures & Algorithms 16

### The Class P

The class of all sets that can be **verified** in polynomial time.

AND

The class of all decision problems that can be **decided** in polynomial time.

P

Winter 2016 CSE 373: Data Structures & Algorithms 17

The question is: can we achieve **even** this for

**HAM?**  
**SAT?**  
**Sudoku?**

Winter 2016 CSE 373: Data Structures & Algorithms 18

Onto the new class, NP  
(Nondeterministic Polynomial Time)

**Verifying Membership**

Is there a short “proof” I can give you to **verify** that:

**G** ∈ HAM?  
**G** ∈ Sudoku?  
**G** ∈ SAT?

**Yes: I can just give you the cycle, solution, circuit**

Winter 2016 CSE 373: Data Structures & Algorithms 20

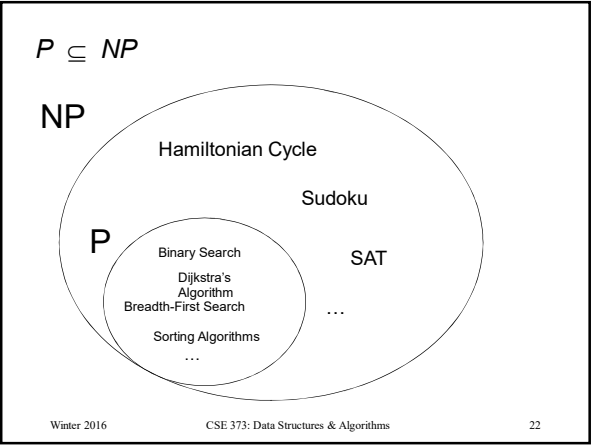

**The Class NP**

The class of sets for which there exist “short” proofs of membership (of polynomial length) that can “quickly” verified (in polynomial time).

Recall: The algorithm doesn’t have to find the proof; it just needs to be able to verify that it is a “correct” proof.

**Fact:  $P \subseteq NP$**

Winter 2016 21 CSE 373: Data Structures & Algorithms

**Summary: P versus NP**

**NP:** “proof of membership” in a set can be **verified** in polynomial time.

**P:** in NP (membership verified in polynomial time)  
**AND** membership in a set can be **decided** in polynomial time.

**Fact:  $P \subseteq NP$**

**Question: Does  $NP \subseteq P$  ?**  
 i.e., **Does  $P = NP$ ?**  
 People generally believe  $P \neq NP$ , but no proof yet

Winter 2016 23 CSE 373: Data Structures & Algorithms

**Why Care?**

Winter 2016 CSE 373: Data Structures & Algorithms 24

### NP Contains Lots of Problems We Don't Know to be in P

- Classroom Scheduling
- Packing objects into bins
- Scheduling jobs on machines
- Finding cheap tours visiting a subset of cities
- Finding good packet routings in networks
- Decryption
- ...

**OK, OK, I care...**

Winter 2016 25 CSE 373: Data Structures & Algorithms

### How could we prove that NP = P?

We would have to show that every set in NP has a polynomial time algorithm...

How do I do that?  
It may take a long time!  
Also, what if I forgot one of the sets in NP?

Winter 2016 CSE 373: Data Structures & Algorithms 26

### How could we prove that NP = P?

We can describe **just one** problem L in NP, such that if this problem L is in P, then  $NP \subseteq P$ .

It is a problem that can capture all other problems in NP.

The "Hardest" Set in NP

We call these problems **NP-complete**

Winter 2016 CSE 373: Data Structures & Algorithms 27

### Theorem (Cook/Levin)

SAT is one problem in NP, such that if we can show SAT is in P, then we have shown  $NP = P$ .

SAT is a problem in NP that can capture all other languages in NP.

We say SAT is **NP-complete**.

Winter 2016 CSE 373: Data Structures & Algorithms 28

### Poly-time reducible to each other

Winter 2016 CSE 373: Data Structures & Algorithms 29

### NP-complete: The "Hardest" problems in NP

Sudoku Clique  
SAT Independent-Set  
3-Colorability HAM

These problems are all "polynomial-time equivalent" i.e., each of these can be reduced to any of the others in polynomial time

**If you get a polynomial-time algorithm for one, you get a polynomial-time algorithm for ALL.**  
(you get millions of dollars, you solve decryption, ... etc.)

Winter 2016 CSE 373: Data Structures & Algorithms 30
