## Quickcheck 02: Asymptotic Analysis

## Name:

## Definition: Dominated by

A function $f(n)$ is dominated by $g(n)$ when...

- There exists two constants $c>0$ and $n_{0}>0$...
- Such that for all values of $n \geq n_{0} \ldots$
- $f(n) \leq c \cdot g(n)$ is true.

Demonstrate that $2 n^{3}-3+9 n^{2}+\sqrt{n}$ is dominated by $n^{3}$ by finding a $c$ and $n_{0}$. Show your work.
