## Quickcheck 06: Solutions

## Name:

Consider the following sequence of numbers:

$$
5,20,10,6,7,3,1,2,7,8,11,3
$$

(a) Insert these numbers into a min-heap where each node has up to three children, instead of two.
(So, instead of inserting into a binary heap, we're inserting into a ternary heap.)
Draw out the tree representation of your completed ternary heap.
Solution:

(b) Draw out the array representation of the above tree.

Solution:

$$
1,3,2,3,20,7,5,10,7,8,11,6
$$

(c) Given a node at index $i$, write a formula to find the index of the parent.

## Solution:

$$
\operatorname{parent}(i)=\left\lfloor\frac{i-1}{3}\right\rfloor
$$

(d) Given a node at index $i$, write a formula to find the $j$-th child. Assume that $0 \leq j<3$.

## Solution:

$$
\operatorname{child}(i, j)=3 i+j+1
$$
