Solution
What the heck is WeTrade?!

- WeTrade is a classified advertising website based on social networking.
- Sell, buy or exchange items face-to-face to/from someone YOU trust.
- NO hassle of shipping, scammer or e-payment.
How does it work?

- WeTrade will be divided into three sections, user interface, back-end application and database. Users will communicate with the application through a web interface. The application will be connected to a database where the users profiles, postings, and settings will be saved.
Project plan

Concept

- Requirements
- Architecture

Detailed Design, Coding, Debugging, Subsystem Testing

System Integration, System Testing

Final Release

1/6 - 1/12
1/13 - 1/17
1/18 - 1/24
1/22 - 2/16
2/17 - 3/2
