

CSE 417

Algorithms and Complexity

Autumn 2023
Lecture 12
Shortest Paths Algorithm and Minimum Spanning Trees

10/22/2023 CSE 417 1

Announcements

- Reading
 - 4.4, 4.5, 4.7
- Midterm
 - Monday, October 30
 - In class, closed book
 - Material through 4.7
 - Old midterm questions available
 - Note – some listed questions are out of scope

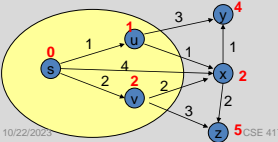

10/22/2023 CSE 417 2

Assume all edges have non-negative cost

Dijkstra's Algorithm

```

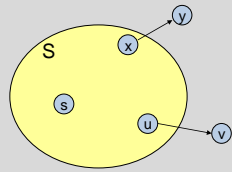

S = {}; d[s] = 0; d[v] = infinity for v != s
While S != V
  Choose v in V-S with minimum d[v]
  Add v to S
  For each w in the neighborhood of v
    d[w] = min(d[w], d[v] + c(v, w))
  
```

10/22/2023 CSE 417 3

Correctness Proof

- Elements in S have the correct label
- Induction: when v is added to S, it has the correct distance label
 - $\text{Dist}(s, v) = d[v]$ when v added to S

10/22/2023 CSE 417 4

Dijkstra Implementation

```

S = {}; d[s] = 0; d[v] = infinity for v != s
While S != V
  Choose v in V-S with minimum d[v]
  Add v to S
  For each w in the neighborhood of v
    if (d[w] > d[v] + c(v, w))
      d[w] = d[v] + c(v, w)
      pred[w] = v
  
```

- Basic implementation requires Heap for tracking the distance values
- Run time $O(m \log n)$

10/22/2023 CSE 417 5

$O(n^2)$ Implementation for Dense Graphs

```

FOR i := 1 TO n
  d[i] := Infinity; visited[i] := FALSE;
d[s] := 0;
FOR i := 1 TO n
  v := -1; dMin := Infinity;
  FOR j := 1 TO n // Find v in V-S to minimize d[v]
    IF visited[j] = FALSE AND d[j] < dMin
      v := j; dMin := d[j];
  IF v = -1
    RETURN;
  visited[v] := TRUE;
  FOR j := 1 TO n // Update d values from v
    IF d[v] + len[v, j] < d[j]
      d[j] := d[v] + len[v, j];
      prev[j] := v;
  
```

10/22/2023 CSE 417 6

Future stuff for shortest paths

- Bellman-Ford Algorithm
 - $O(nm)$ time
 - Handles negative cost edges
 - Identifies negative cost cycle if present
 - Dynamic programming algorithm
 - Very easy to implement

10/22/2023

CSE 417

7

Bottleneck Shortest Path

- Define the bottleneck distance for a path to be the maximum cost edge along the path

10/22/2023

CSE 417

8

Compute the bottleneck shortest paths

10/22/2023

CSE 417

9

How do you adapt Dijkstra's algorithm to handle bottleneck distances

- Does the correctness proof still apply?

10/22/2023

CSE 417

10

Dijkstra's Algorithm for Bottleneck Shortest Paths

$S = \{ \}$; $d[s] = \text{negative infinity}$; $d[v] = \text{infinity}$ for $v \neq s$

While $S \neq V$

Choose v in $V-S$ with minimum $d[v]$

Add v to S

For each w in the neighborhood of v

$d[w] = \min(d[w], \max(d[v], c(v, w)))$

10/22/2023

CSE 417

11

Minimum Spanning Tree

- Introduce Problem
- Demonstrate three different greedy algorithms
- Provide proofs that the algorithms work

10/22/2023

CSE 417

12

Minimum Spanning Tree Definitions

- $G=(V,E)$ is an UNDIRECTED graph
- Weights associated with the edges
- Find a spanning tree of minimum weight
 - If not connected, complain

10/22/2023

CSE 417

13

Minimum Spanning Tree

10/22/2023

CSE 417

14

Greedy Algorithms for Minimum Spanning Tree

- Extend a tree by including the cheapest outgoing edge
- Add the cheapest edge that joins disjoint components
- Delete the most expensive edge that does not disconnect the graph

10/22/2023

CSE 417

15

Greedy Algorithm 1 Prim's Algorithm

- Extend a tree by including the cheapest outgoing edge

Construct the MST with Prim's algorithm starting from vertex a
Label the edges in order of insertion

CSE 417

16

Greedy Algorithm 2 Kruskal's Algorithm

- Add the cheapest edge that joins disjoint components

Construct the MST with Kruskal's algorithm
Label the edges in order of insertion

CSE 417

17

Greedy Algorithm 3 Reverse-Delete Algorithm

- Delete the most expensive edge that does not disconnect the graph

Construct the MST with the reverse-delete algorithm
Label the edges in order of removal

CSE 417

18

Dijkstra's Algorithm for Minimum Spanning Trees

$S = \{s\}; d[s] = 0; d[v] = \text{infinity for } v \neq s$

While $S \neq V$

Choose v in $V-S$ with minimum $d[v]$

Add v to S

For each w in the neighborhood of v

$d[w] = \min(d[w], c(v, w))$

10/22/2023

CSE 417

19

Minimum Spanning Tree

Undirected Graph $G=(V,E)$ with edge weights

10/22/2023

CSE 417

20

Greedy Algorithms for Minimum Spanning Tree

- **[Prim]** Extend a tree by including the cheapest outgoing edge
- **[Kruskal]** Add the cheapest edge that joins disjoint components
- **[ReverseDelete]** Delete the most expensive edge that does not disconnect the graph

10/22/2023

CSE 417

21

Why do the greedy algorithms work?

- For simplicity, assume all edge costs are distinct

10/22/2023

CSE 417

22

Edge inclusion lemma

- Let S be a subset of V , and suppose $e = (u, v)$ is the minimum cost edge of E , with u in S and v in $V-S$
- e is in every minimum spanning tree of G
 - Or equivalently, if e is not in T , then T is not a minimum spanning tree

10/22/2023

CSE 417

23

e is the minimum cost edge between S and $V-S$

Proof

- Suppose T is a spanning tree that does not contain e
- Add e to T , this creates a cycle
- The cycle must have some edge $e_1 = (u_1, v_1)$ with u_1 in S and v_1 in $V-S$

- $T_1 = T - \{e_1\} + \{e\}$ is a spanning tree with lower cost
- Hence, T is not a minimum spanning tree
