

# CSE 417: Algorithms with Complexity

## Lecture 23 Shortest Paths Problem and Dynamic Programming

11/22/2023

CSE 417

1

## Announcements

- No class on Friday

11/22/2023

CSE 417

2

## Shortest Path Problem

- Dijkstra's Single Source Shortest Paths Algorithm
  - $O(m \log n)$  time, positive cost edges
- Bellman-Ford Algorithm
  - $O(mn)$  time for graphs which can have negative cost edges

11/22/2023

CSE 417

3

## Dynamic Programming

- Express problem as an optimization
- Order subproblems so that results are computed in proper order

11/22/2023

CSE 417

4

## Shortest Paths as DP

- $\text{Dist}_s[s] = 0$
- $\text{Dist}_s[v] = \min_w [\text{Dist}_s[w] + c_{wv}]$
- How do we order the computation
- Directed Acyclic graph: Topological Sort
- Dijkstra's algorithm determines an order

11/22/2023

CSE 417

5

## Lemma

- If a graph has no negative cost cycles, then the **shortest** paths are **simple** paths
- Shortest paths have at most  $n-1$  edges

11/22/2023

CSE 417

6

## Shortest paths with a given number of edges

- Find the shortest path from  $s$  to  $w$  with exactly  $k$  edges

11/22/2023

CSE 417

7

## Express as a recurrence

- Compute distance from starting vertex  $s$
- $\text{Opt}_k(w) = \min_x [\text{Opt}_{k-1}(x) + c_{xw}]$
- $\text{Opt}_0(w) = 0$  if  $w = s$  and infinity otherwise

11/22/2023

CSE 417

8

## Algorithm, Version 1

```

for each w
  M[0, w] = infinity;
M[0, s] = 0;
for i = 1 to n-1
  for each w
    M[i, w] = min_x(M[i-1, x] + cost[x, w]);
  
```

11/22/2023

CSE 417

9

## Algorithm, Version 2

```

for each w
  M[0, w] = infinity;
M[0, s] = 0;
for i = 1 to n-1
  for each w
    M[i, w] = min(M[i-1, w], min_x(M[i-1, x] + cost[x, w]));
  
```

11/22/2023

CSE 417

10

## Algorithm, Version 3

```

for each w
  M[w] = infinity;
M[s] = 0;
for i = 1 to n-1
  for each w
    M[w] = min(M[w], min_x(M[x] + cost[x, w]));
  
```

12

## Correctness Proof for Algorithm 3

- Key lemmas, for all  $w$ :
  - There exists a path of length  $M[w]$  from  $s$  to  $w$
  - At the end of iteration  $i$ ,  $M[w] \leq M[i, w]$ ;

11/22/2023

CSE 417

13

## Algorithm, Version 4

```

for each w
  M[w] = infinity;
M[s] = 0;
for i = 1 to n-1
  for each w
    for each x
      if (M[w] > M[x] + cost[x,w])
        P[w] = x;
        M[w] = M[x] + cost[x,w] ;
    
```

## Theorem

If the pointer graph has a cycle, then the graph has a negative cost cycle

11/22/2023  
Proof: See text.

CSE 417

15

## If the pointer graph has a cycle, then the graph has a negative cost cycle

- If  $P[w] = x$  then  $M[w] \geq M[x] + \text{cost}(x, w)$ 
  - Equal when  $w$  is updated
  - $M[x]$  could be reduced after update
- Let  $v_1, v_2, \dots, v_k$  be a cycle in the pointer graph with  $(v_k, v_1)$  the last edge added
  - Just before the update
    - $M[v_j] \geq M[v_{j+1}] + \text{cost}(v_{j+1}, v_j)$  for  $j < k$
    - $M[v_k] > M[v_1] + \text{cost}(v_1, v_k)$
  - Adding everything up
    - $0 > \text{cost}(v_1, v_2) + \text{cost}(v_2, v_3) + \dots + \text{cost}(v_k, v_1)$

11/22/2023

CSE 417

16

## Negative Cycles

- If the pointer graph has a cycle, then the graph has a negative cycle
- Therefore: if the graph has no negative cycles, then the pointer graph has no negative cycles

11/22/2023

CSE 417

17

## Finding negative cost cycles

- What if you want to find negative cost cycles?

11/22/2023

CSE 417

18

## Finding the longest Path in a DAG

11/22/2023

CSE 417

19

## What about finding Longest Paths in a directed graph

- Can we just change Min to Max?
