

CSE 417 Algorithms and Complexity

Autumn 2023
Lecture 26
Network Flow Applications

Announcements

- Homework 9
- Exam practice problems on course homepage
- Final Exam: Monday, December 11, 8:30 AM
 - One Hour Fifty Minutes

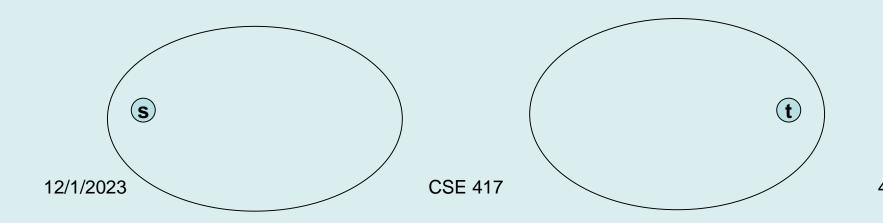

Fri, Dec 1	Net Flow Applications
Mon, Dec 4	Net Flow Applications + NP-Completeness
Wed, Dec 6	NP-Completeness
Fri, Dec 8	NP-Completeness
Mon, Dec 11	Final Exam

Outline

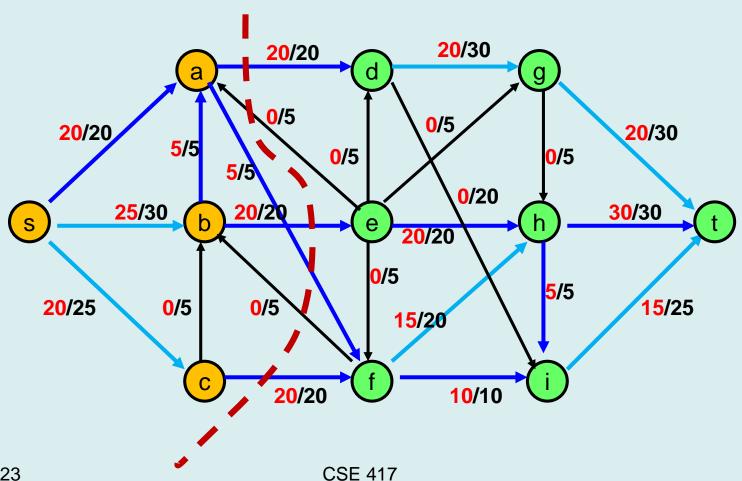

- Network flow definitions
- Flow examples
- Augmenting Paths
- Residual Graph
- Ford Fulkerson Algorithm
- Cuts
- Maxflow-MinCut Theorem
- Maxflow Algorithms
- Simple applications of Max Flow
- Non-simple applications of Max Flow

Cuts in a graph

- Cut: Partition of V into disjoint sets S, T with s in S and t in T.
- Cap(S,T): sum of the capacities of edges from S to T
- Problem: Find the s-t Cut with minimum capacity

Max Flow / Min Cut

12/1/2023

Max Flow - Min Cut Theorem

- There exists a cut S, T such that Flow(S,T) = Cap(S,T)
- Proof also shows that Ford Fulkerson algorithm finds a maximum flow

Ford Fulkerson Runtime

Cost per phase X number of phases

- Phases
 - Capacity leaving source: C
 - Add at least one unit per phase
- Cost per phase
 - Build residual graph: O(m)
 - Find s-t path in residual: O(m)

Network flow performance

- Ford-Fulkerson algorithm
 - -O(mC)
- Find the maximum capacity augmenting path
 - O(m²log(C)) time algorithm for network flow
- Find the shortest augmenting path
 - O(m²n) time algorithm for network flow
- Find a blocking flow in the residual graph
 - O(mnlog n) time algorithm for network flow
- Interior Point Methods
 - -O(m+n)

Problem Reduction

- Reduce Problem A to Problem B
 - Convert an instance of Problem A to an instance of Problem B
 - Use a solution of Problem B to get a solution to Problem A
- Practical
 - Use a program for Problem B to solve Problem A
- Theoretical
 - Show that Problem B is at least as hard as Problem A

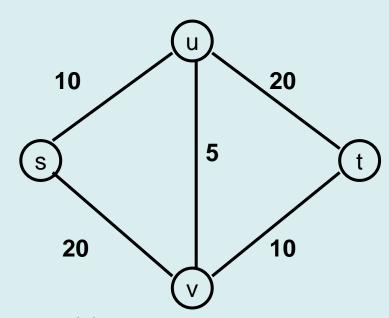

Problem Reduction Examples

 Reduce the problem of finding the Maximum of a set of integers to finding the Minimum of a set of integers

Find the maximum of: 8, -3, 2, 12, 1, -6

Undirected Network Flow

- Undirected graph with edge capacities
- Flow may go either direction along the edges (subject to the capacity constraints)

Bipartite Matching

 A graph G=(V,E) is bipartite if the vertices can be partitioned into disjoints sets X,Y

 A matching M is a subset of the edges that does not share any vertices

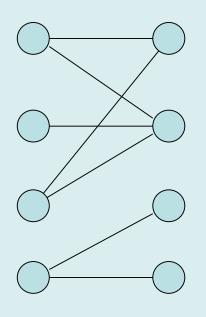

Find a matching as large as possible

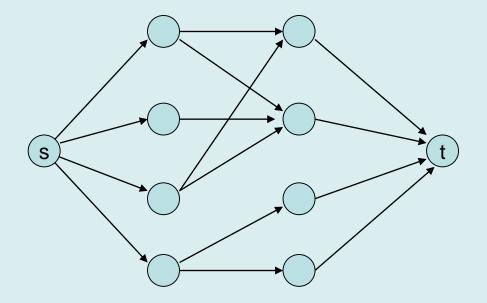

Application

- A collection of teachers
- A collection of courses
- And a graph showing which teachers can teach which courses

Converting Matching to Network Flow

Multi-source network flow

- Multi-source network flow
 - Sources s_1, s_2, \ldots, s_k
 - Sinks t_1, t_2, \ldots, t_i
- Solve with Single source network flow

Resource Allocation: Assignment of reviewers

- A set of papers P₁, . . . , P_n
- A set of reviewers R₁, . . . , R_m
- Paper P_i requires A_i reviewers
- Reviewer R_i can review B_i papers
- For each reviewer R_j, there is a list of paper L_{j1}, . . . , L_{jk} that R_j is qualified to review

Baseball elimination

- Can the Dinosaurs win the league?
- Remaining games:
 - AB, AC, AD, AD, AD,BC, BC, BC, BD, CD

	W	L
Ants	4	2
Bees	4	2
Cockroaches	3	3
Dinosaurs	1	5

A team wins the league if it has strictly more wins than any other team at the end of the season A team ties for first place if no team has more wins, and there is some other team with the same number of wins

Baseball elimination

- Can the Fruit Flies win or tie the league?
- Remaining games:
 - AC, AD, AD, AD, AF,
 BC, BC, BC, BC, BC,
 BD, BE, BE, BE, BE,
 BF, CE, CE, CE, CF,
 CF, DE, DF, EF, EF

	W	L
Ants	17	12
Bees	16	7
Cockroaches	16	7
Dinosaurs	14	13
Earthworms	14	10
Fruit Flies	12	15

Assume Fruit Flies win remaining games

- Fruit Flies are tied for first place if no team wins more than 19 games
- Allowable wins
 - Ants (2)
 - Bees (3)
 - Cockroaches (3)
 - Dinosaurs (5)
 - Earthworms (5)
- 18 games to play
 - AC, AD, AD, AD, BC, BC, BC, BC, BC, BC, BD, BE, BE, BE, CE, CE, CE, DE

	W	L
Ants	17	13
Bees	16	8
Cockroaches	16	9
Dinosaurs	14	14
Earthworms	14	12
Fruit Flies	19	15

Remaining games

AC, AD, AD, AD, BC, BC, BC, BC, BC, BD, BE, BE, BE, CE, CE, CE, DE

$$(\mathsf{A})$$

Minimum Cut Applications

- Image Segmentation
- Open Pit Mining / Task Selection Problem
- Reduction to Min Cut problem

S, T is a cut if S, T is a partition of the vertices with s in S and t in T

The capacity of an S, T cut is the sum of the capacities of all edges going from S to T

Image Segmentation

 Separate foreground from background

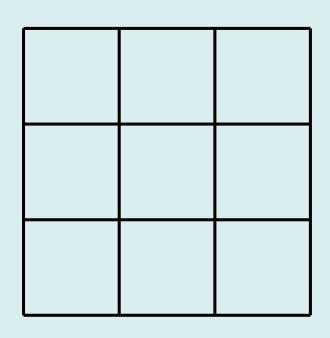

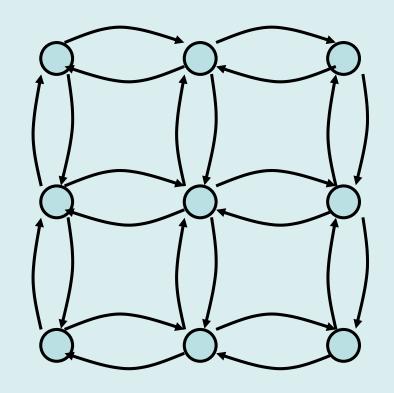

Image analysis

- a_i: value of assigning pixel i to the foreground
- b_i: value of assigning pixel i to the background
- p_{ij}: penalty for assigning i to the foreground, j to the background or vice versa
- A: foreground, B: background
- $Q(A,B) = \sum_{\{i \text{ in } A\}} a_i + \sum_{\{j \text{ in } B\}} b_j \sum_{\{(i,j) \text{ in } E, i \text{ in } A, j \text{ in } B\}} p_{ij}$

Pixel graph to flow graph

Mincut Construction
