Algorithms and Complexity

Autumn 2023
Lecture 26
Network Flow Applications

12/1/2023 CSE 417 1

Announcements

- Homework 9
- Exam practice problems on course homepage
- Final Exam: Monday, December 11, 8:30 AM
  - One Hour Fifty Minutes

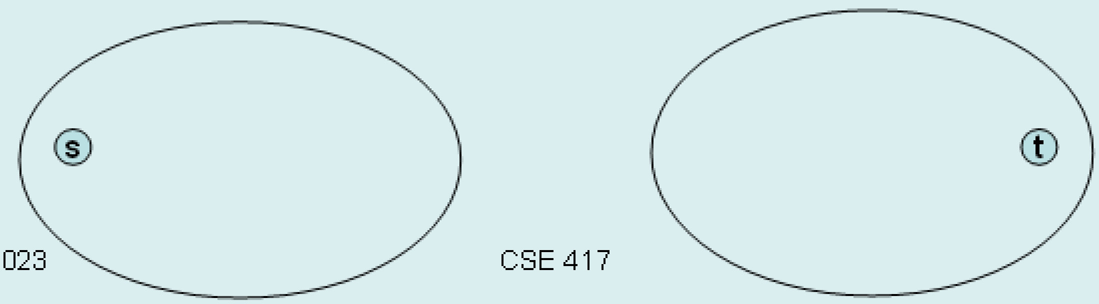
Fri, Dec 1	Net Flow Applications
Mon, Dec 4	Net Flow Applications + NP-Completeness
Wed, Dec 6	NP-Completeness
Fri, Dec 8	NP-Completeness
Mon, Dec 11	Final Exam

Outline

- ~~Network flow definitions~~
- ~~Flow examples~~
- ~~Augmenting Paths~~
- ~~Residual Graph~~
- ~~Ford Fulkerson Algorithm~~
- ~~Cuts~~
- ~~Maxflow-MinCut Theorem~~
- ~~Maxflow Algorithms~~
- Simple applications of Max Flow
- Non-simple applications of Max Flow

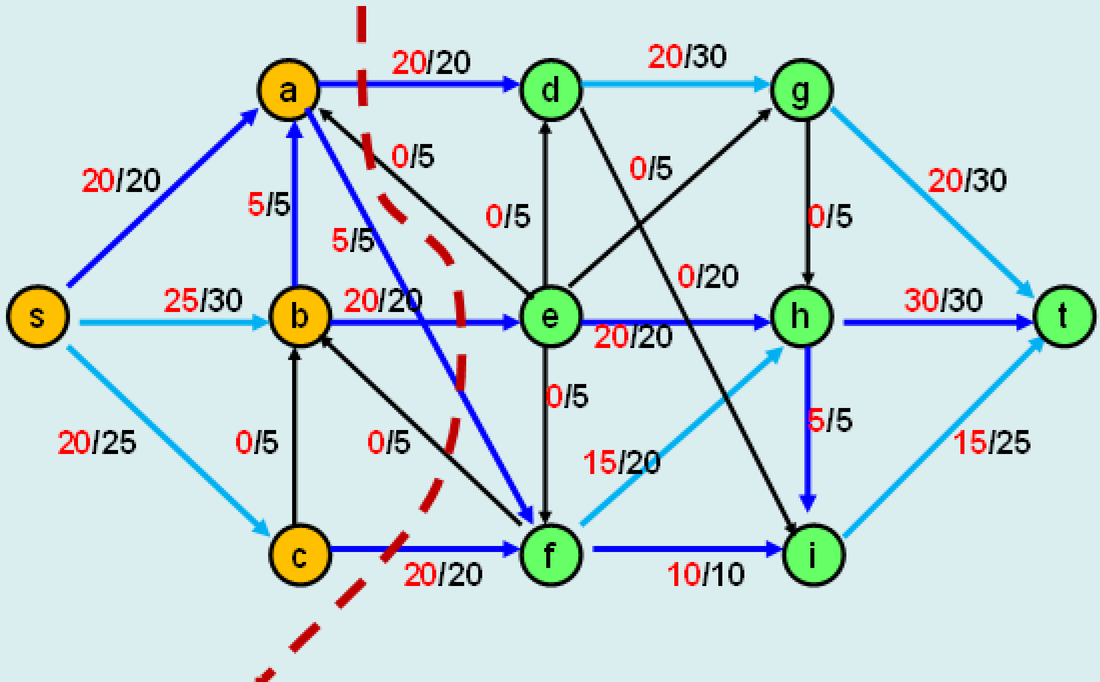
Cuts in a graph

- Cut: Partition of V into disjoint sets S, T with s in S and t in T.
- Cap(S,T): sum of the capacities of edges from S to T
- Problem: Find the s-t Cut with minimum capacity



Review

Max Flow / Min Cut



Max Flow - Min Cut Theorem

- There exists a cut S, T such that
  Flow(S,T) = Cap(S,T)
- Proof also shows that Ford Fulkerson algorithm finds a maximum flow

Ford Fulkerson Runtime

- Cost per phase X number of phases

- Phases
  - Capacity leaving source: C
  - Add at least one unit per phase
- Cost per phase
  - Build residual graph: O(m)
  - Find s-t path in residual: O(m)

Network flow performance

- Ford-Fulkerson algorithm
  - $O(mC)$
- Find the maximum capacity augmenting path
  - $O(m^2\log(C))$ time algorithm for network flow
- Find the shortest augmenting path
  - $O(m^2n)$ time algorithm for network flow
- Find a blocking flow in the residual graph
  - $O(mn\log n)$ time algorithm for network flow
- Interior Point Methods
  - $O(m + n)$

Problem Reduction

- ~~Reduce~~ Convert Problem A to Problem B
  - Convert an instance of Problem A to an instance of Problem B
  - Use a solution of Problem B to get a solution to Problem A
- Practical
  - Use a program for Problem B to solve Problem A
- Theoretical
  - Show that Problem B is at least as hard as Problem A

Problem Reduction Examples

- Reduce the problem of finding the Maximum of a set of integers to finding the Minimum of a set of integers

Find the maximum of: 8, -3, 2, 12, 1, -6

-8, 3, -2, -12, -1, 6

-12

12

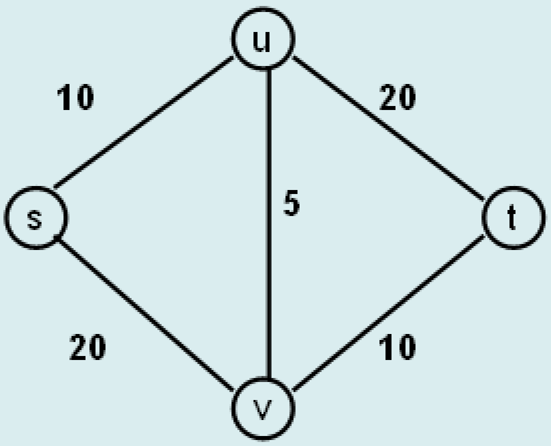
12/1/2023

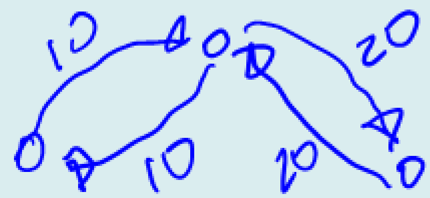
Construct an equivalent minimization problem

10

Undirected Network Flow

- Undirected graph with edge capacities
- Flow may go either direction along the edges (subject to the capacity constraints)





12/1/2023

Construct an equivalent flow problem

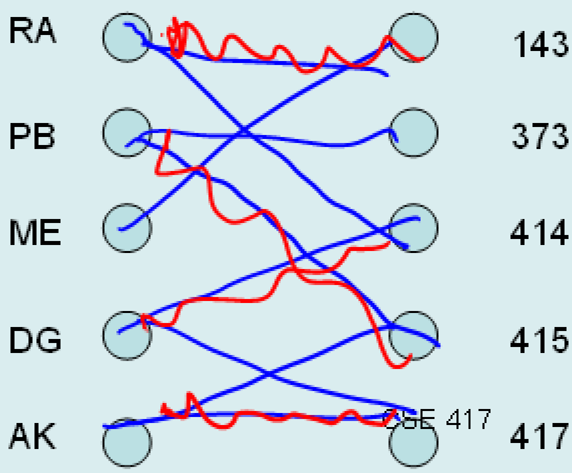
11

Bipartite Matching

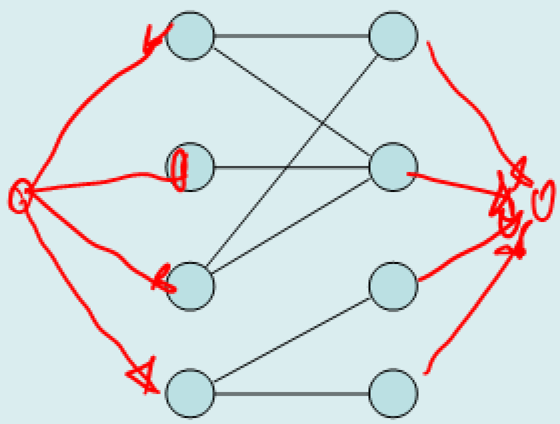
- A graph G=(V,E) is bipartite if the vertices can be partitioned into disjoints sets X,Y
- A matching M is a subset of the edges that does not share any vertices
- Find a matching as large as possible

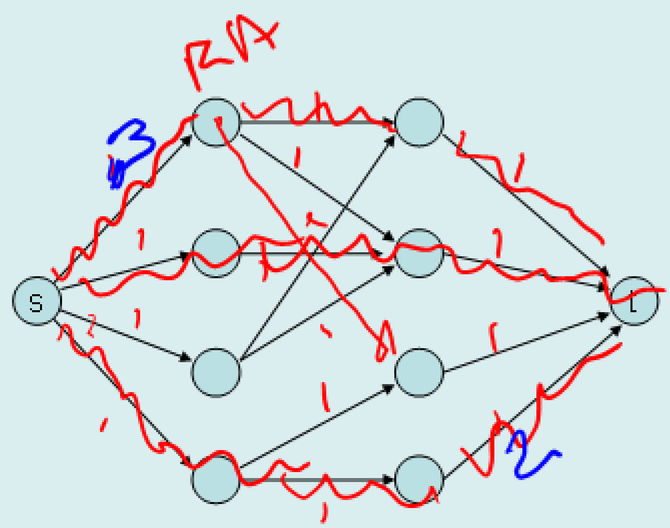
Application

- A collection of teachers
- A collection of courses
- And a graph showing which teachers can teach which courses



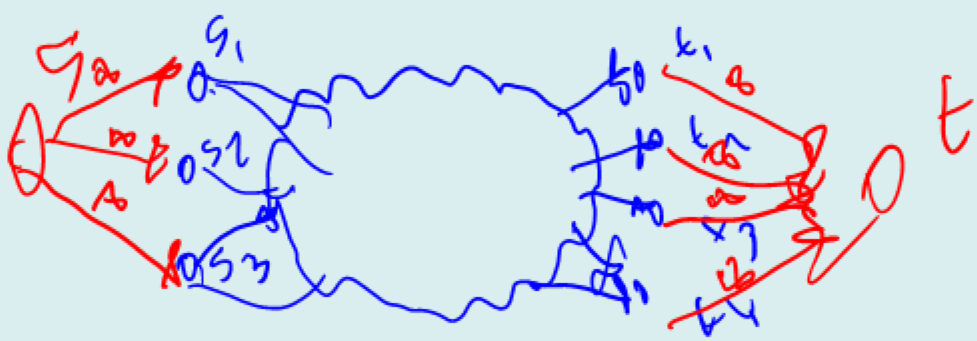
Converting Matching to Network Flow





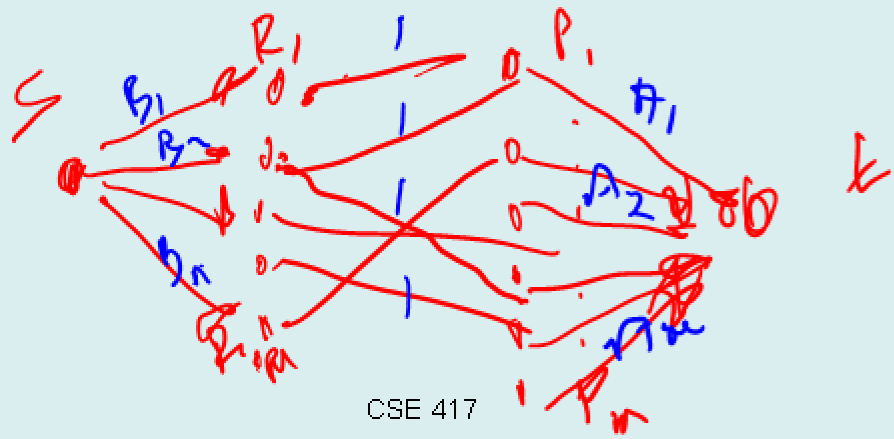
Multi-source network flow

- Multi-source network flow
  - Sources $s_1, s_2, \ldots, s_k$
  - Sinks $t_1, t_2, \ldots, t_j$
- Solve with Single source network flow



Resource Allocation: Assignment of reviewers

- A set of papers $P_1, \ldots, P_n$
- A set of reviewers $R_1, \ldots, R_m$
- Paper P_i requires A_i reviewers
- Reviewer R_j can review B_j papers
- For each reviewer R_j, there is a list of paper $L_{j1}, \ldots, L_{jk}$ that R_j is qualified to review



Baseball elimination

- Can the Dinosaurs win the league?
- Remaining games:
  - AB, AC, AD, AD, AD, BC, BC, BC, BD, CD

	W	L
Ants	4	2
Bees	4	2
Cockroaches	3	3
Dinosaurs	1	5

A team wins the league if it has strictly more wins than any other team at the end of the season
A team ties for first place if no team has more wins, and there is some other team with the same number of wins

Baseball elimination

- Can the Fruit Flies win or tie the league?
- Remaining games:
  - AC, AD, AD, AD, AF, BC, BC, BC, BC, BC, BD, BE, BE, BE, BE, BF, CE, CE, CE, CF, CF, DE, DF, EF, EF

	W	L	
Ants	17	12	2
Bees	16	7	3
Cockroaches	16	7	3
Dinosaurs	14	13	5
Earthworms	14	10	5
Fruit Flies	12	15	
	19		

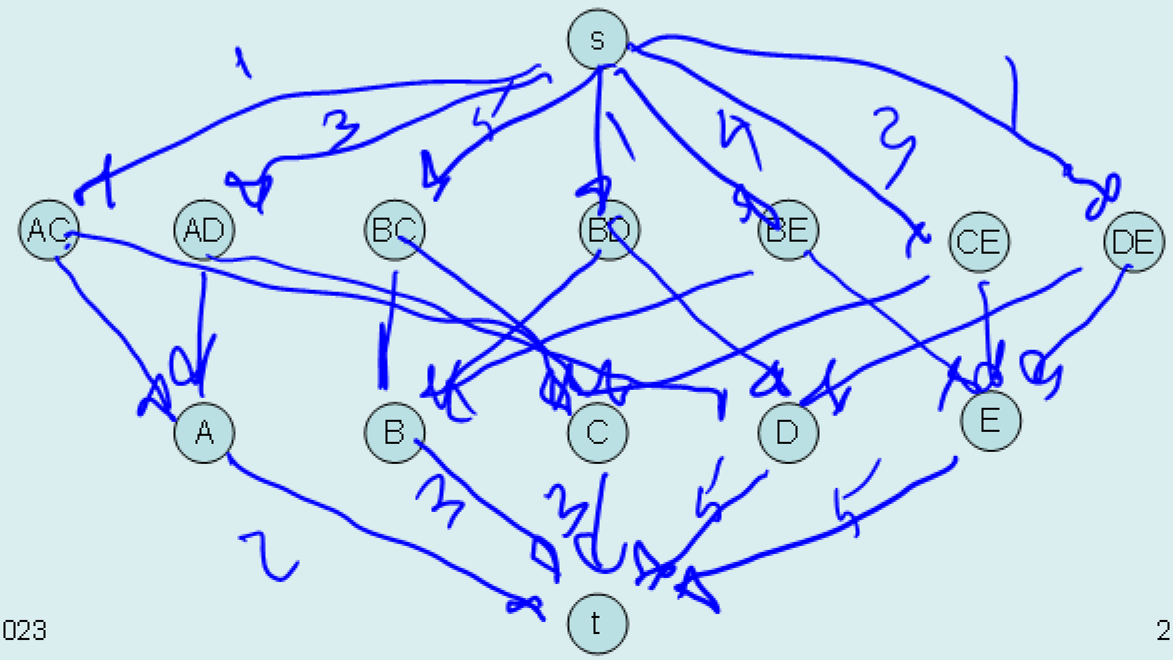
Assume Fruit Flies win remaining games

- Fruit Flies are tied for first place if no team wins more than 19 games
- Allowable wins
  - Ants (2)
  - Bees (3)
  - Cockroaches (3)
  - Dinosaurs (5)
  - Earthworms (5)
- 18 games to play
  - AC, AD, AD, AD, BC, BC, BC, BC, BC, BD, BE, BE, BE, BE, CE, CE, CE, DE

	W	L
Ants	17	13
Bees	16	8
Cockroaches	16	9
Dinosaurs	14	14
Earthworms	14	12
Fruit Flies	19	15

Remaining games

AC, AD, AD, AD, BC, BC, BC, BC, BC, BD, BE, BE, BE, BE, CE, CE, CE, DE



12/1/2023 20

Minimum Cut Applications

- Image Segmentation
- Open Pit Mining / Task Selection Problem
- Reduction to Min Cut problem

S, T is a cut if S, T is a partition of the vertices with
s in S and t in T
The capacity of an S, T cut is the sum of the capacities of all edges going from S to T

Image Segmentation

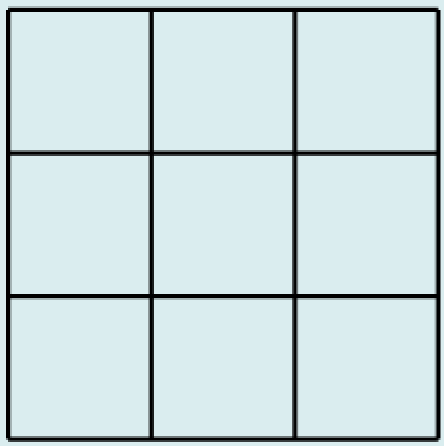
- Separate foreground from background

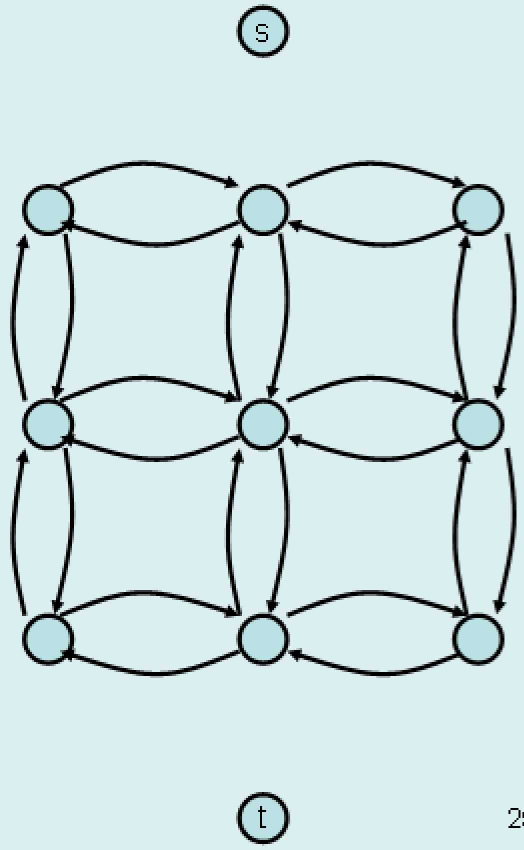
12/1/2023
CSE 417
23

Image analysis

- a_i: value of assigning pixel i to the foreground
- b_i: value of assigning pixel i to the background
- p_{ij}: penalty for assigning i to the foreground, j to the background or vice versa
- A: foreground, B: background
- $Q(A,B) = \Sigma_{\{i \text{ in } A\}} a_i + \Sigma_{\{j \text{ in } B\}} b_j - \Sigma_{\{(i,j) \text{ in } E,\ i \text{ in } A,\ j \text{ in } B\}} p_{ij}$

Pixel graph to flow graph





Mincut Construction
