Algorithms and Complexity

Graphs and Graph Algorithms
Winter 2023
Lecture 6

1/18/2023

CSE 417

1

Announcements

- Reading
 - Chapter 3
 - Start on Chapter 4
- Homework 2
 - Programming problem: related to analysis of stable matching

1/18/2023

CSE 417

2

Graph Theory

- $G = (V, E)$
 - V : vertices, $|V| = n$
 - E : edges, $|E| = m$
- Undirected graphs
 - Edges sets of two vertices $\{u, v\}$
- Directed graphs
 - Edges ordered pairs (u, v)
- Many other flavors
 - Edge / vertices weights
 - Parallel edges
 - Self loops
- Path: v_1, v_2, \dots, v_k with (v_i, v_{i+1}) in E
 - Simple Path
 - Cycle
 - Simple Cycle
- Neighborhood
 - $N(v)$
- Distance
 - Undirected
 - Directed (strong connectivity)
- Connectivity
 - Undirected
 - Directed (strong connectivity)
- Trees
 - Rooted
 - Unrooted

1/18/2023

CSE 417

3

Graph Representation

 $V = \{a, b, c, d\}$
 $E = \{(a, b), \{a, c\}, \{a, d\}, \{b, d\}\}$

Adjacency List

 $O(n + m)$ space

	1	1	1
1		0	1
1	0		0
1	1	0	

Incidence Matrix

 $O(n^2)$ space

1/18/2023

CSE 417

1/18/2023

CSE 417

4

Implementation Issues

- Graph with n vertices, m edges
- Operations
 - Lookup edge
 - Add edge
 - Enumeration edges
 - Initialize graph
- Space requirements

1/18/2023

CSE 417

5

Graph search

- Find a path from s to t

```

S = {s}
while S is not empty
  u = Select(S)
  visit u
  foreach v in N(u)
    if v is unvisited
      Add(S, v)
      Pred[v] = u
    if (v == t) then path found
  
```

1/18/2023

CSE 417

6

Graph Search

1/18/2023 CSE 417 7

Breadth first search

- Explore vertices in layers
 - s in layer 1
 - Neighbors of s in layer 2
 - Neighbors of layer 2 in layer 3 . . .

1/18/2023 CSE 417 8

Breadth First Search

- Build a BFS tree from s

```

Initialize Level[v] = -1 for all v;
Q = {s}
Level[s] = 1;
while Q is not empty
    u = Q.Dequeue()
    foreach v in N(u)
        if (Level[v] == -1)
            Q.Enqueue(v)
            Pred[v] = u
            Level[v] = Level[u] + 1
            
```

1/18/2023 CSE 417 9

Key observation

- All edges go between vertices on the same layer or adjacent layers

1/18/2023 CSE 417 10

Bipartite Graphs

- A graph V is bipartite if V can be partitioned into V_1, V_2 such that all edges go between V_1 and V_2
- A graph is bipartite if it can be two colored

1/18/2023 CSE 417 11

Can this graph be two colored?

1/18/2023 CSE 417 12

Algorithm

- Run BFS
- Color odd layers red, even layers blue
- If no edges between the same layer, the graph is bipartite
- If edge between two vertices of the same layer, then there is an odd cycle, and the graph is not bipartite

1/18/2023

CSE 417

13

Theorem: A graph is bipartite if and only if it has no odd cycles

1/18/2023

CSE 417

14

Lemma 1

- If a graph contains an odd cycle, it is not bipartite

1/18/2023

CSE 417

15

Lemma 2

- If a BFS tree has an *intra-level edge*, then the graph has an odd length cycle

Intra-level edge: both end points are in the same level

1/18/2023

CSE 417

16

Lemma 3

- If a graph has no odd length cycles, then it is bipartite

1/18/2023

CSE 417

17

Graph Search

- Data structure for next vertex to visit determines search order

1/18/2023

CSE 417

18

Graph search

Breadth First Search

```
S = {s}
while S is not empty
  u = Dequeue(S)
  if u is unvisited
    visit u
    foreach v in N(u)
      Enqueue(S, v)
```

Depth First Search

```
S = {s}
while S is not empty
  u = Pop(S)
  if u is unvisited
    visit u
    foreach v in N(u)
      Push(S, v)
```

1/18/2023

CSE 417

19

Breadth First Search

- All edges go between vertices on the same layer or adjacent layers

1/18/2023

CSE 417

20

Depth First Search

- Each edge goes between vertices on the same branch
- No cross edges

1/18/2023

CSE 417

21

Connected Components

- Undirected Graphs

1/18/2023

CSE 417

22

Computing Connected Components in $O(n+m)$ time

- A search algorithm from a vertex v can find all vertices in v 's component
- While there is an unvisited vertex v , search from v to find a new component

1/18/2023

CSE 417

23

Directed Graphs

- A Strongly Connected Component is a subset of the vertices with paths between every pair of vertices.

1/18/2023

CSE 417

24

Identify the Strongly Connected Components

1/18/2023

CSE 417

25

Strongly connected components can be found in $O(n+m)$ time

- But it's tricky!
- Simpler problem: given a vertex v , compute the vertices in v 's scc in $O(n+m)$ time

1/18/2023

CSE 417

26

Topological Sort

- Given a set of tasks with precedence constraints, find a linear order of the tasks

1/18/2023

CSE 417

27

Find a topological order for the following graph

1/18/2023

CSE 417

28

If a graph has a cycle, there is no topological sort

- Consider the first vertex on the cycle in the topological sort
- It must have an incoming edge

Definition: A graph is Acyclic if it has no cycles

1/18/2023

CSE 417

29

Lemma: If a (finite) graph is acyclic, it has a vertex with in-degree 0

- Proof:
 - Pick a vertex v_1 , if it has in-degree 0 then done
 - If not, let (v_2, v_1) be an edge, if v_2 has in-degree 0 then done
 - If not, let (v_3, v_2) be an edge . . .
 - If this process continues for more than n steps, we have a repeated vertex, so we have a cycle

1/18/2023

CSE 417

30

Topological Sort Algorithm

While there exists a vertex v with in-degree 0

Output vertex v

Delete the vertex v and all out going edges

1/18/2023

CSE 417

31

Details for $O(n+m)$ implementation

- Maintain a list of vertices of in-degree 0
- Each vertex keeps track of its in-degree
- Update in-degrees and list when edges are removed
- m edge removals at $O(1)$ cost each
