Algorithms and Complexity

Greedy Algorithms

Winter 2023

Lecture 8

1/23/2023 CSE 417 1

Announcements

- Reading
 - For today, sections 4.1, 4.2,
 - For next week sections 4.4, 4.5, 4.7, 4.8
- Homework 3 is available
 - Random Graphs

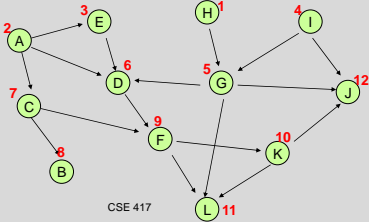

1/23/2023 CSE 417 2

Highlight from last lecture: Topological Sort Algorithm

While there exists a vertex v with in-degree 0

Output vertex v

Delete the vertex v and all out going edges

1/23/2023 CSE 417 3

Greedy Algorithms

- Solve problems with the simplest possible algorithm
- The hard part: showing that something simple actually works
- Pseudo-definition
 - An algorithm is **Greedy** if it builds its solution by adding elements one at a time using a simple rule

1/23/2023 CSE 417 4

Scheduling Theory

- Tasks
 - Processing requirements, release times, deadlines
- Processors
- Precedence constraints
- Objective function
 - Jobs scheduled, lateness, total execution time

1/23/2023 CSE 417 5

Interval Scheduling

- Tasks occur at fixed times
- Single processor
- Maximize number of tasks completed

- Tasks $\{1, 2, \dots, N\}$
- Start and finish times: $s(i), f(i)$

1/23/2023 CSE 417 6

What is the largest solution?

Greedy Algorithm for Scheduling

Let T be the set of tasks, construct a set of independent tasks I , A is the rule determining the greedy algorithm

$I = \{ \}$

While (T is not empty)

 Select a task t from T by a rule A

 Add t to I

 Remove t and all tasks incompatible with t from T

1/23/2023

CSE 417

8

Simulate the greedy algorithm for each of these heuristics

Schedule earliest starting task

Schedule shortest available task

Schedule task with fewest conflicting tasks

9

Greedy solution based on earliest finishing time

Example 1

Example 2

Example 3

10

Theorem: Earliest Finish Algorithm is Optimal

- Key idea: Earliest Finish Algorithm stays ahead
- Let $A = \{i_1, \dots, i_k\}$ be the set of tasks found by EFA in increasing order of finish times
- Let $B = \{j_1, \dots, j_m\}$ be the set of tasks found by a different algorithm in increasing order of finish times
- Show that for $r \leq \min(k, m)$, $f(i_r) \leq f(j_r)$

1/23/2023

CSE 417

11

Stay ahead lemma

- A always stays ahead of B , $f(i_r) \leq f(j_r)$
- Induction argument
 - $f(i_1) \leq f(j_1)$
 - If $f(i_{r-1}) \leq f(j_{r-1})$ then $f(i_r) \leq f(j_r)$

1/23/2023

CSE 417

12

Completing the proof

- Let $A = \{i_1, \dots, i_k\}$ be the set of tasks found by EFA in increasing order of finish times
- Let $O = \{j_1, \dots, j_m\}$ be the set of tasks found by an optimal algorithm in increasing order of finish times
- If $k < m$, then the Earliest Finish Algorithm stopped before it ran out of tasks

1/23/2023

CSE 417

13

Scheduling all intervals

- Minimize number of processors to schedule all intervals

1/23/2023

CSE 417

14

How many processors are needed for this example?

Prove that you cannot schedule this set of intervals with two processors

1/23/2023

CSE 417

16

Depth: maximum number of intervals active

1/23/2023

CSE 417

17

Algorithm

- Sort by start times
- Suppose maximum depth is d , create d slots
- Schedule items in increasing order, assign each item to an open slot
- Correctness proof: When we reach an item, we always have an open slot

Greedy Graph Coloring

Theorem: An undirected graph with maximum degree K can be colored with $K+1$ colors

Coloring Algorithm, Version 1

```

Let  $k$  be the largest vertex degree
Choose  $k+1$  colors

for each vertex  $v$ 
    Color[ $v$ ] = uncolored

for each vertex  $v$ 
    Let  $c$  be a color not used in  $N[v]$ 
    Color[ $v$ ] =  $c$ 
    
```

1/23/2023

20

Coloring Algorithm, Version 2

```

for each vertex  $v$ 
    Color[ $v$ ] = uncolored

for each vertex  $v$ 
    Let  $c$  be the smallest color not used in  $N[v]$ 
    Color[ $v$ ] =  $c$ 
    
```

21

Scheduling tasks

- Each task has a length t_i and a deadline d_i
- All tasks are available at the start
- One task may be worked on at a time
- All tasks must be completed
- Goal minimize maximum lateness
 - Lateness = $f_i - d_i$ if $f_i \geq d_i$
