

CSE 417 Algorithms and Complexity

Winter 2023
Lecture 11
Dijkstra's algorithm

Upcoming lectures

- Topics
 - Dijkstra's Algorithm (Section 4.4)
 - Wednesday: Minimum Spanning Trees
- Reading
 - 4.4, 4.5, 4.7, 4.8

Single Source Shortest Path Problem

- Given a graph and a start vertex s
 - Determine distance of every vertex from s
 - Identify shortest paths to each vertex
 - Express concisely as a "shortest paths tree"
 - Each vertex has a pointer to a predecessor on shortest path

Construct Shortest Path Tree from s

Warmup

- If P is a shortest path from s to v , and if t is on the path P , the segment from s to t is a shortest path between s and t

- WHY?

Assume all edges have non-negative cost

Dijkstra's Algorithm

```

S = {}
d[s] = 0; d[v] = infinity for v != s
While S != V
  Choose v in V-S with minimum d[v]
  Add v to S
  For each w in the neighborhood of v
    d[w] = min(d[w], d[v] + c(v, w))
  
```

Simulate Dijkstra's algorithm (starting from s) on the graph

1/30/2023

CSE 417

7

Who was Dijkstra?

- What were his major contributions?

1/30/2023

CSE 417

8

<http://www.cs.utexas.edu/users/EWD/>

- Edsger Wybe Dijkstra was one of the most influential members of computing science's founding generation. Among the domains in which his scientific contributions are fundamental are
 - algorithm design
 - programming languages
 - program design
 - operating systems
 - distributed processing
 - formal specification and verification
 - design of mathematical arguments

1/30/2023

CSE 417

9

Dijkstra's Algorithm as a greedy algorithm

- Elements committed to the solution by order of minimum distance

1/30/2023

CSE 417

10

Correctness Proof

- Elements in S have the correct label
- Key to proof: when v is added to S, it has the correct distance label.

1/30/2023

CSE 417

11

Proof

- Let v be a vertex in V-S with minimum d[v]
- Let P_v be a path of length d[v], with an edge (u, v)
- Let P be some other path to v. Suppose P first leaves S on the edge (x, y)
 - $P = P_{sx} + c(x, y) + P_{yv}$
 - $\text{Len}(P_{sx}) + c(x, y) \geq d[y]$
 - $\text{Len}(P_{yv}) \geq 0$
 - $\text{Len}(P) \geq d[y] + 0 \geq d[v]$

1/30/2023

CSE 417

12

Negative Cost Edges

- Draw a small example a negative cost edge and show that Dijkstra's algorithm fails on this example

1/30/2023

CSE 417

13

Dijkstra Implementation

```
S = {}; d[s] = 0; d[v] = infinity for v != s
While S != V
  Choose v in V-S with minimum d[v]
  Add v to S
  For each w in the neighborhood of v
    d[w] = min(d[w], d[v] + c(v, w))
```

- Basic implementation requires Heap for tracking the distance values
- Run time $O(m \log n)$

1/30/2023

CSE 417

14

$O(n^2)$ Implementation for Dense Graphs

```
FOR i := 1 TO n
  d[i] := Infinity; visited[i] := FALSE;
d[s] := 0;

FOR i := 1 TO n
  v := -1; dMin := Infinity;
  FOR j := 1 TO n
    IF visited[j] = FALSE AND d[j] < dMin
      v := j; dMin := d[j];
  IF v = -1
    RETURN;
  visited[v] := TRUE;

  FOR j := 1 TO n
    IF d[v] + len[v, j] < d[j]
      d[j] := d[v] + len[v, j];
      prev[j] := v;
```

CSE 417

15

Bottleneck Shortest Path

- Define the bottleneck distance for a path to be the maximum cost edge along the path

1/30/2023

CSE 417

16

Compute the bottleneck shortest paths

1/30/2023

CSE 417

17

How do you adapt Dijkstra's algorithm to handle bottleneck distances

- Does the correctness proof still apply?

1/30/2023
