Visual Information Design

Prof. James A. Landay
University of Washington

Autumn 2012

* Includes material from Skip Shelly, Edward Tufte, Kevin Mullet, & Scott Klemmer

Outline

- Review Prototyping
- Simplification
- Small Multiples
- Typography & Grid systems
- Things to Avoid
- Color
- Proportion & Scale
- Design economy
- Visualization

Hall of Shame!

Hall of Fame or Shame?

USER INTERFACE DESIGN + PROTOTYPING + EVALUATION
Prototyping Review

- Prototypes are a concrete representation of a design or final product
- Low-fi testing allows us to:
  - quickly iterate
  - get feedback from users & change right away
- Problems with lo-fi testing:
  - computer inherently “buggy”
  - timings not accurate
  - some widgets hard to recognize as sketches
  - dynamic behaviors hard to simulate

Quotes: Mullet and Sano

“Design is not something that can be applied after the fact, when the fundamental organization of the product has already been determined—though this is indeed a common misconception. To be effective, design must be an integral part of the product development lifecycle.”

Quotes: Mihai Nadin

“Method helps intuition when it is not transformed into dictatorship. Intuition augments method if it does not instill anarchy. In every moment of our semiotic existence, method and intuition complement one another.”

How Might We Improve This?

You're invited to Zelda's 30th Birthday Party! Please come dressed as your favorite Gilbert and Sullivan character. Children are welcome. Dinner will be served; if you'd like to bring food, call Stacy at 555-1212. When: October 20th, at 7:00 PM Where: Zelda's house. If you need directions, feel free to call Zelda and ask. Please RSVP to Stacy by October 10th. See you there!

Use whitespace to make groupings obvious

“Some space must be narrow so that other space may be wide, and some space must be emptied so that other space may be filled.”

– Robert Bringhurst

Elements of Typographic Style

Can We Do Better Still?

You're invited to
Zelda's 30th Birthday Party!
Please come dressed as your favorite Gilbert and Sullivan character. Children are welcome. Dinner will be served; if you'd like to bring food, call Stacy at 555-1212.
When: October 20th, at 7:00 PM Where: Zelda's house. If you need directions, feel free to call Zelda and ask.
Please RSVP to Stacy by October 10th. See you there!
Use size contrasts to indicate hierarchy

“Information consists of differences that make a difference.”

– Edward Tufte

Envisioning Information

Quotes: Antoine de Saint Exupery

“In anything at all, perfection is attained not when there is no longer anything to add, but when there is no longer anything to take away.”

Simplification & Reduction

Abstraction

London Underground

Small Multiples

- Economy of line
- Similarities enable us to notice differences

<tr>
<td>Obliqued</td>
<td>Answ</td>
</tr>
<tr>
<td>True italic</td>
<td>Answ</td>
</tr>
</tbody>
</table>

Page 4

Asymmetric Typography

J A N   T S C H I C H O L D

How blocks used to be arranged in magazines. Schematic, thoughtless centering of blocks (= ugly).

The same blocks, correctly arranged in the same type area. Constructive, meaningful, and economical (= beautiful).

Page 5

Grid Systems

• A key pattern for implementing rationality, modernism, asymmetry
• Note that no elements are “centered”

Page 6
Use alignment to guide the eye & reduce clutter

- Avoid slight misalignments; undermine your ability to beacon organization
- And they draw the eye – our perceptual system notices deviations from patterns
- When you deviate from a pattern, do so strategically

Administrivia

- Medium-fidelity Interactive prototype due Tue 12/4
  - as much of the final UI as possible
  - much of backend processing or data faked
  - run on phone in web browser (most)
  - use a prototyping tool (we highly recommend JustInMind)
- Presentations 12/4 & 12/6
- Presentations & poster session during final exam slot (Mon 12/10)

Color

- Hue is gradation of colour
- Saturation/purity is intensity of the hue
- Luminance is the brightness in an image

Technology-Centered Colors

- Nice Hex codes, “evenly” distributed
- But yowch! Lime green and hot pink?

Color Spaces
Human-Centered Colors

- Munsell (left): Perceptually based
- Pantone (right): Functionally based

Color: Edward Tufte

Color matching systems require consistent color matching.

Anne Spalter, The Computer in the Visual Arts

How to get color right

- Design in grayscale first
- Keep luminance values from grayscale when moving to color

Proportion and Scale

- Berlin's "retinal variables" form the basis for all forms of visual coding. A visual code can be based on these variables: size, value, orientation, texture, shape, or position in 2D or 3D space.
- Non-photographic color provides an additional dimension not pictured here.

Kevin Mullet and Darrell Sano, Designing Visual Interfaces
Visualization

- Tree maps
- Design Galleries

Tree Maps (SmartMoney)

Design Galleries

Some Starting Points

- Gather materials you find…
  - successful
  - contextually relevant

- Could be from a very different domain
  “Good artists borrow, great artists steal”
  – Picasso

- Include visual design professionals in the iterative design cycle

Typography on the web

Summary

- Grid systems help us put information on the page in a logical manner
  - similar things close together
- Small changes help us see key differences (e.g., small multiples)
- Abstraction is a key to design
- RGB color space leads to bad colors
- Use color properly – not for ordering!
- Avoid clutter

Next Time

- Have a Happy Thanksgiving!
- Tue, 11/27: User Testing
- Read
  - Appendix A from *The Design of Sites*
  - *Discussion of guidelines for user observation* By Kathleen Gomoll & Anne Nichol
  - optional: Statistica Ch1, & parts of Ch3
  - optional: Lewis & Rieman Ch. 5
