

User Interface Design, Prototyping, and Evaluation

# Mobile Computing & Communication

Prof. James A. Landay  
 University of Washington  
 CSE 441  
 Spring 2012

\* Based on slides of Prof. Scott Kiemmer, Stanford

## Hall of Fame or Hall of Shame?

- Windows Mobile home screen
- What will I use this phone for other than as a phone?

Spring 2012 CSE 441 - Advanced HCI 2

## Hall of Shame!

- Too many clicks to do anything
- Calendar
  - tap “Start”
  - scroll through icons to find the one I want
  - less if used it recently (then at top, but still several clicks)

Spring 2012 CSE 441 - Advanced HCI 3

User Interface Design, Prototyping, and Evaluation

## Outline

- History of miniaturization & mobility
- Palm Pilot
- iPhone

Spring 2012 CSE 441 - Advanced HCI 5

Timeline of mobile communication technology:

- 1840: Alexander Graham Bell invents the telephone.
- 1876: Invention of the telephone.
- 1894: Marconi invents the radio.
- 1901: The first transatlantic phone call.
- 1902: The first mobile phone call around the world.
- 1910: The first mobile phone call.
- 1917: The first mobile phone call.
- 1920: The first mobile phone call.
- 1927: The first mobile phone call.
- 1930: The first mobile phone call.
- 1935: The first mobile phone call.
- 1940: The first mobile phone call.
- 1945: The first mobile phone call.
- 1950: The first mobile phone call.
- 1955: The first mobile phone call.
- 1960: The first mobile phone call.
- 1965: The first mobile phone call.
- 1970: The first mobile phone call.
- 1975: The first mobile phone call.
- 1980: The first mobile phone call.
- 1985: The first mobile phone call.
- 1990: The first mobile phone call.

In 1954 Harold S. Osborne, the recently retired chief engineer for AT&T, made the following prediction (quoted in Conly 1954, p. 88):

*Lets say that in the ultimate, whenever a baby is born anywhere in the world he [sic] is given at birth a number that will be his telephone number for life. As soon as he can talk, he is given a watchlike device with 10 little buttons on one side and a screen on the other [see Figure 8.1]. Thus equipped, at any time when he wishes to talk with anyone in the world, he will pull out the device and punch on the keys the number of his friend. Then, turning the device over, he will hear the voice of his friend and see his face on the screen, in color and in three dimensions. If he does not see him and hear him, he will know that the friend is dead.*

### Mobile Design Evolving Rapidly!

Newton (1993) Palm Pilot (1997) iPhone (2007)

Spring 2012 CSE 441 - Advanced HCI 11

### “You Will” – the future comes slower than we’d like

Spring 2012 12

## There was the Newton ...

Apple Newton MessagePad

The Newton OS GUI

Photograph of screen displaying Checklist, some bullet points checked and/or "collapsed"

Newton screen displaying a Note with text, "ink text", a sketch, & vectorized shapes

Spring 2012 CSE 441 - Advanced HCI 13

## The Newton Had Problems...

**Design Issues**

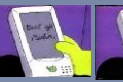

- Physical size
  - too big
- Connectivity
  - not much
- Recognition
  - relied on it too much, didn't work well enough

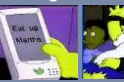

"Hey, Take a memo on your Newton"

"Beat Up Martin"

"Eek Up Martin"

"Baahh!"

The Original Apple Newton's handwriting recognition was made light of in *The Simpsons* episode [Lisa on Ice](#)

Source: The Simpsons, Wikipedia  
 Spring 2012 CSE 441 - Advanced HCI 14

## The Palm Pilot Improved...

**Design Wins**

- Physical size: fits in the front pocket
- Connectivity: easy sync
- Recognition: simple graffiti

Jeff Hawkins, Palm

Grffiti

Rob Haitani, Palm OS [Designs] what should be most prominent based on frequency of use, and makes most often used interactions accessible in a single step.

Pocket Size

HotSync

CSE440 - Winter 2012 User Interface Design, Prototyping, and Evaluation 17

Spring 2012 CSE 441 - Advanced HCI 18

- ### What will we do with Mobile?
- The same applications?
  - Different ones?
  
  - Some of both is most likely... but the context & constraints differ
- Spring 2012 CSE 441 - Advanced HCI 29

### Malaysia *Integrated Compass. Why?*

Spring 2012 CSE 441 - Advanced HCI 32

### Grameen Telecom *Village Phone*

PHOTOGRAPH BY CORNEL PIZZAZZ

Spring 2012 CSE 441 - Advanced HCI 33

### What Makes Mobile Design Exciting?

- Many Design Choices
- Think different from GUI/Web
- Swiss army vs. dedicated
- Pen/speech/touch/gesture modalities
- Integrate with other real-world tasks
- Social apps

Always in your pocket\* or w/ you!

\*often not true for women

Spring 2012 CSE 441 - Advanced HCI 34

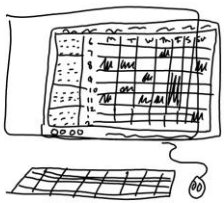

### What Makes Mobile Design Difficult?

Design constraints

- Limited attention/Interactions bursty
  - sometimes not true (people use phones stationary sometimes for long times)
  - see Ubicomp '2006 paper by Patel
- Screen size small
- Form factor
- Limited network connectivity
- Speech / pen / multimodal

Spring 2012 CSE 441 - Advanced HCI 35

### Mobilize ≠ Miniaturize

## Mobile Usage Context

- Mobile device always with user & on
- Use gives clues to context...
  - Calendar
  - Job schedule
  - Repair man example...
- Location gives many contextual cues
  - ..
- Simple activity inference gives context
  - Driving? Adapt how?

Spring 2012

CSE 441 - Advanced HCI

37

## Limited Attention & Input Interaction

- Minimize keystrokes
- Provide overview + detail
- Understandable interface at a glance
- Design with tasks
- Minimum set of functions

Spring 2012

CSE 441 - Advanced HCI

38

## Example approach: Nokia Navi-Key

FIGURE 2-1. Nokia's constant push for Simplicity in handset design.

Reducing number of buttons

Source: Scott Jenson, *The Simplicity Shift*, Cambridge University Press, 2002.

Spring 2012

CSE 441 - Advanced HCI

39

The motivation of this Simplicity was the understanding that only two tasks were used the majority of the time: answering the phone and dialing from the phone book. Nokia came up with an extremely simple and elegant design to do this. Answer the phone? Press the big button. Hang up the phone? Press the big button. Call someone? Use the arrow keys to get to the right person and press the big button. By restricting

## Mobile Input: Lots of Research

Spring 2012

CSE 441 - Advanced HCI

40

## Disambiguation w/ Dictionary

- Dictionary based (such as T9, Pocket PC)
  - e.g., 2-2-5-3
  - able 2-2-5-3-0
  - cake 2-2-5-3-N-0
  - bald 2-2-5-3-N-N-0
  - calf 2-2-5-3-N-N-N-0
- Lots of “N” = Next

Source: Microsoft, MacKenzie, I.S., Kober, H., Smith, D., Jones, T., Shapner, E. (2001). LetterWise: Prefix-based disambiguation for mobile text input. Proceedings of the Symposium on User Interface Software and Technology - UIST 2001, pp. 111-120. New York: ACM.

Spring 2012

CSE 441 - Advanced HCI

41

## Disambiguation w/ Predictive

- Predictive (such as LetterWise)
  - e.g., t-h-
  - e A%
  - i B%
  - o C%
  - u D%
  - ...

Title: This is a test memo  
To use SureType Just type like you normally would and let the system offer the proper word and alternatives using the SureType Options box

Source: Microsoft, MacKenzie, I.S., Kober, H., Smith, D., Jones, T., Shapner, E. (2001). LetterWise: Prefix-based disambiguation for mobile text input. Proceedings of the Symposium on User Interface Software and Technology - UIST 2001, pp. 111-120. New York: ACM.

Spring 2012

CSE 441 - Advanced HCI

42

## Dictionary vs. Predictive

Figure 11. Comparison of entry rates (wpm) with practice for LetterWise, T9, and MultiTap. (Note: LetterWise and MultiTap figures are from Figure 6. Simulated T9 figures are from Figure 10 with 0.85 frequency of words in dictionary)

Source: Mackenzie, I. S., Kober, H., Smith, D., Jones, T., Brierley, E. (2001). LetterWise: Prefix-based disambiguation for mobile text input. Proceedings of the ACM Symposium on User Interface Software and Technology - UIST 2001, pp. 111-120. New York: ACM.

## Case Study: iPhone Input

### Design distinctions

- Multi-touch Input
- Disambiguation of input
- Animations

Internet +  
Music +  
Phone

Predictive  
Touch keyboard

Multi-touch | Mac  
OS X | Wireless |  
Accelerometer |  
Proximity Sensor

## iPhone Typing Algorithm

- Model where a user touched on the screen
- Model the layout of keys and what keys surround the touch
- If word not in dictionary (or if an extremely unlikely word), present alternative
- While user types, dynamically adjust (invisible) target sizes of keys
- User can accept by simply tapping 'Space'

## State of the Art: Shapewriter

## System/Service Design

## The Future: Sensor Networks

Live Ad Hoc Sensor  
Network showing  
Light Intensity

A handful of  
network sensor  
'dots'

Lots of 'dots' - getting  
ready for the big demo

### The Future: Mobile Everywhere

- A 2002 study calculated there were around 4.2 million CCTV cameras in the UK - one for every 14 people.
- “If you go forward 50 years, you are probably talking about one million forms of sensor per person in the UK,” he said.
- This was a conservative estimate, he said. “More aggressive” calculations suggest there could be 20m sensors per person.

There could be one million sensors per UK resident by 2057

Source: BBC, “Sensor rise powers life recorders”

### Information Appliances

- Mobile devices with dedicated purpose
