# **CSE 442** - Data Visualization **Evaluation**

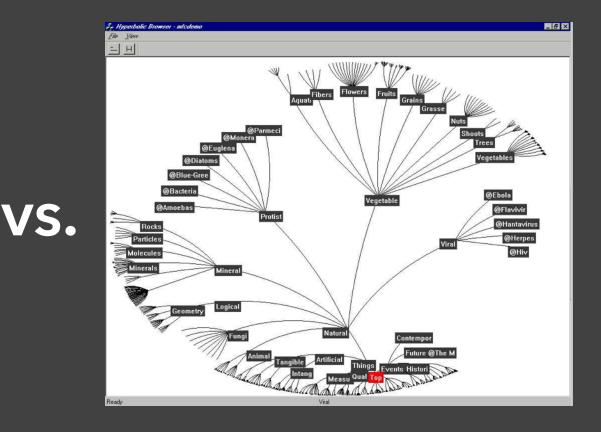

Jeffrey Heer University of Washington

How do we determine if a visualization is *effective*?

#### **Example: Tree Browsers**

# **Evaluation Methods**

**Inspection or Principled Rationale** Apply design heuristics, perceptual principles

**Informal User Study** Have people use visualization, observe results

#### **Controlled Experiment**

Choose appropriate tasks / users to compare Choose metrics (time, error, **what else?**)

# **Evaluation Methods**

#### **Field Deployment or Case Studies** Observation and Interview Document effects on work practices

#### **Theoretical Analysis**

Algorithm time and space complexity

#### Benchmarks

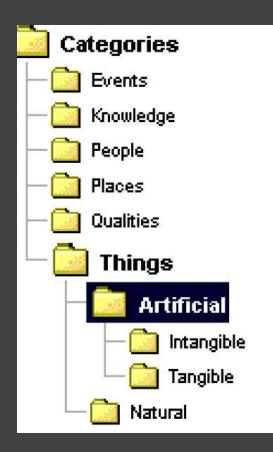

Performance (e.g., interactive frame rates) Scalability to larger data sets

# Topics

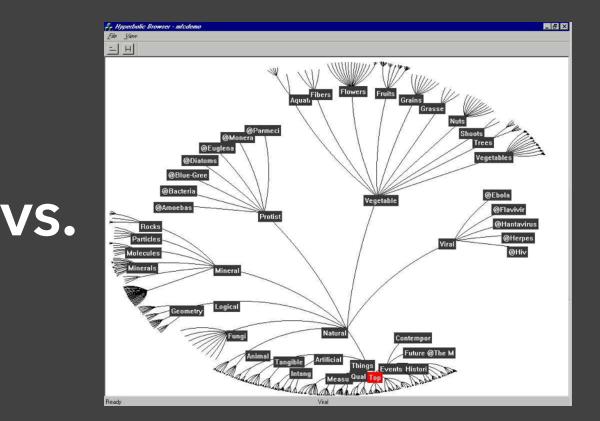

Focus+Context Methods (Trees, Spatial Navigation) Data Density of Time Series Perceptual Organization of Graphs Contextual Effects on Visualization Use Discussion and Course Evaluation

# The Great Browse-Off! [CHI 97]

Microsoft File Explorer

#### Xerox PARC Hyperbolic Tree

Xerox PARC researchers ran eye-tracking studies to investigate... [Pirolli et al 00]

Xerox PARC researchers ran eye-tracking studies to investigate... [Pirolli et al 00]

Subjects performed both retrieval and comparison tasks of varying complexity.

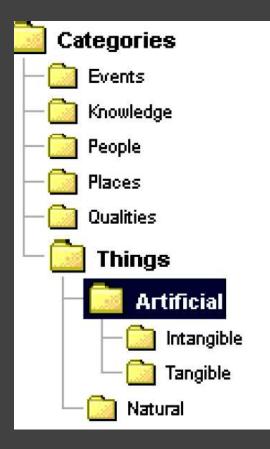

Xerox PARC researchers ran eye-tracking studies to investigate... [Pirolli et al 00]

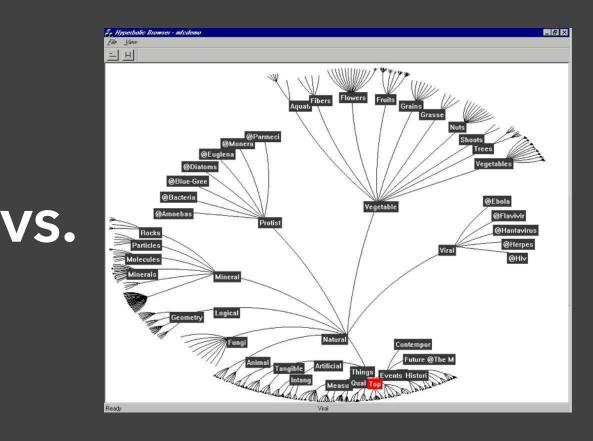

Subjects performed both retrieval and comparison tasks of varying complexity.

No significant performance differences were found across task conditions.

#### How do users navigate the tree?

# How do users navigate the tree? They read the labels!

**Microsoft File Explorer** 

Xerox PARC Hyperbolic Tree

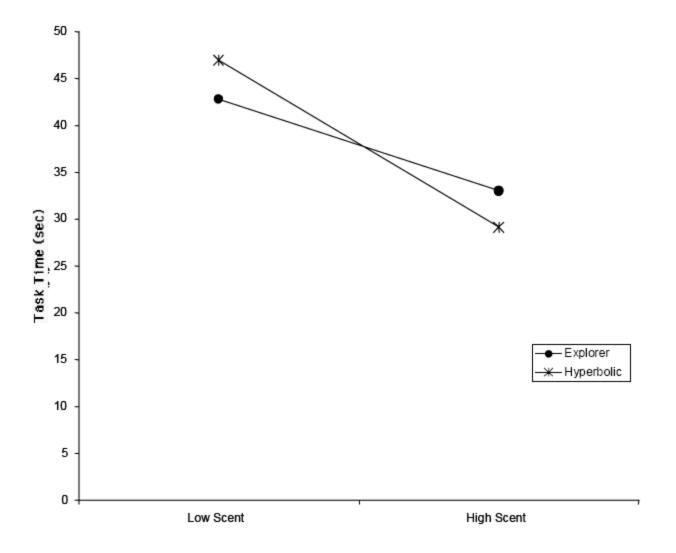

#### How do users navigate the tree?

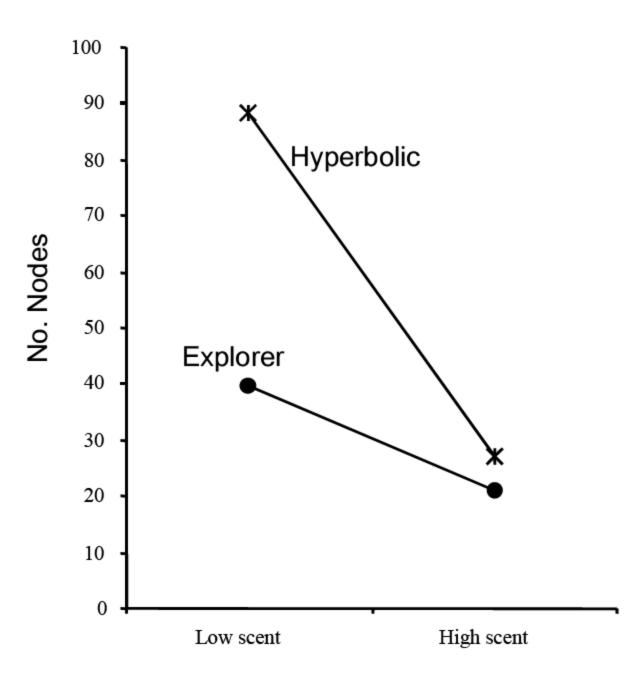

**Information Scent:** A user's (imperfect) perception of the value, cost, or access path of information sources obtained from proximal cues. [Pirolli & Card 99]

#### How do users navigate the tree?

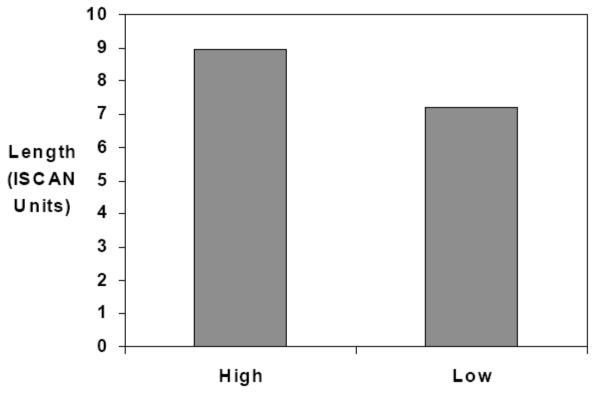

**Information Scent:** A user's (imperfect) perception of the value, cost, or access path of information sources obtained from proximal cues. [Pirolli & Card 99]

**Operationalize as:** the proportion of participants who correctly identified the location of the task answer from looking at upper branches in the tree.

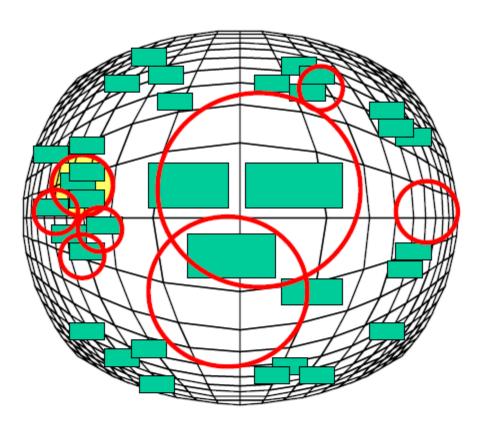

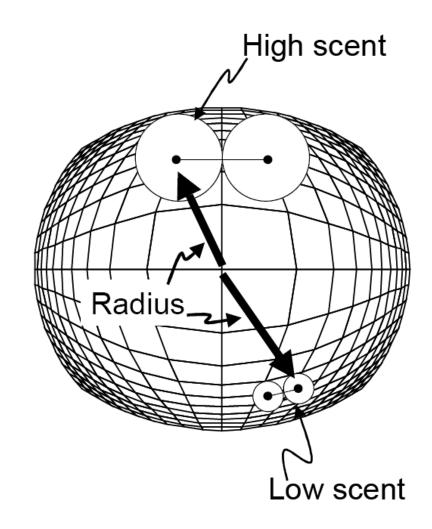

#### Length of Eye Movements

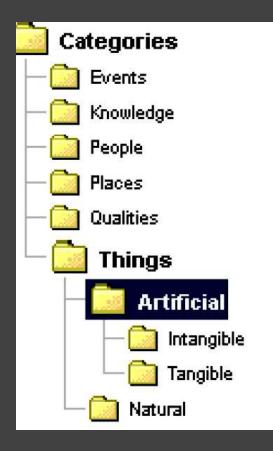

Scent

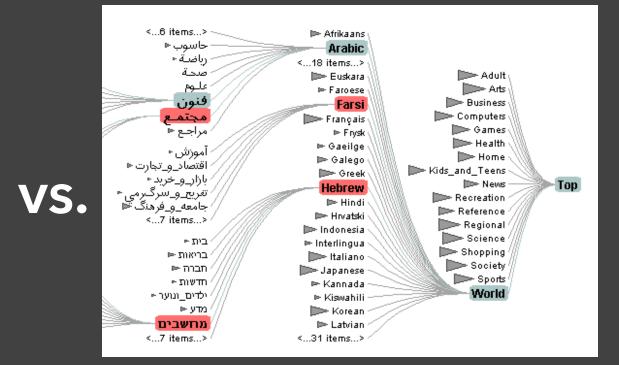

#### An Adaptive Field of View?

#### More Evaluations

#### **Evaluation of DOI Trees**

**DOITree vs. Windows Explorer** [Budiu, AVI 06]

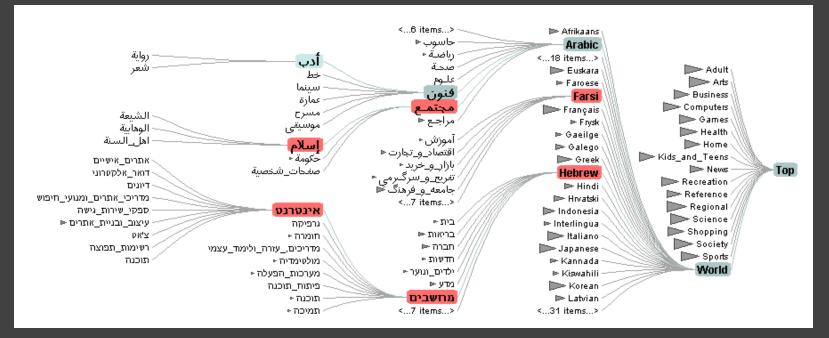

Nodes visited (avg)DOI:Revisitation (avg)DOI:Divergence (avg)DOI:

DOI:83 Exp:53 *p*<.005 DOI:6.6 Exp:8.2 *p*<.005 DOI:4.6 Exp:3.9 *p*<.001

DOITree more forgiving to navigation errors **BUT** no significant difference in task time

**DOITree vs. Google Directory** [Pirolli, CHI 06] DOITree has superior task knowledge transfer

#### Support rapid visual scanning Most people don't read in circles!

Degree of Interest Trees [Heer & Card 04]

People don't read in circles! Showing more is not always better Distractors can decrease task performance Interaction with quality of information scent

People don't read in circles! Showing more is not always better **Navigation cues critical to search Informative labels** or landmarks needed Poor **information scent** undermines search

#### Lessons Learned

Both **task** and **data properties** (here, *information scent*) may interact with the visualization type in unexpected ways.

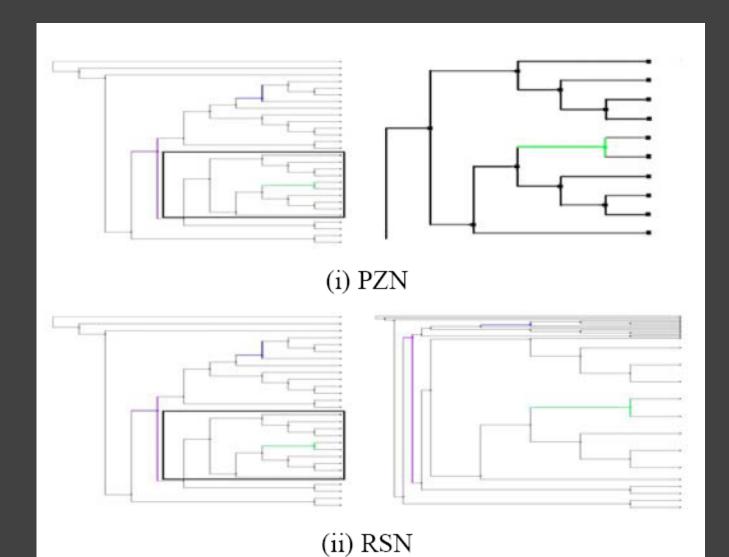

Equal **performance** in terms of accuracy or response time is **not the whole picture**. We often require more detailed study!

# **Spatial Navigation**

#### An Evaluation of Pan & Zoom and Rubber Sheet Navigation with and without an Overview

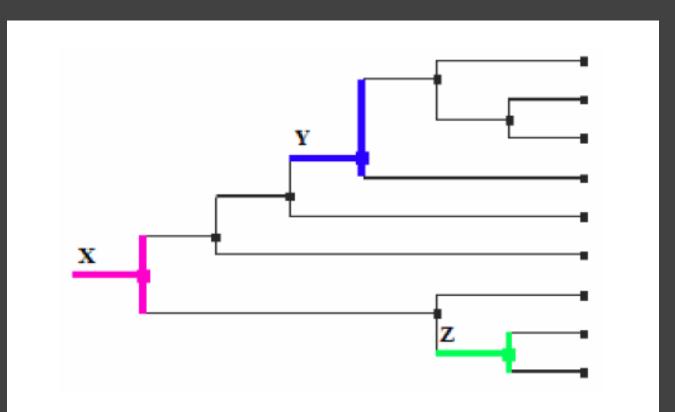

Dmitry Nekrasovski, Adam Bodnar, Joanna McGrenere, François Guimbretière, Tamara Munzner

#### Pan & Zoom vs. Rubber Sheet

#### **Experimental Task**

Compare topological distance between nodes in a dendrogram.

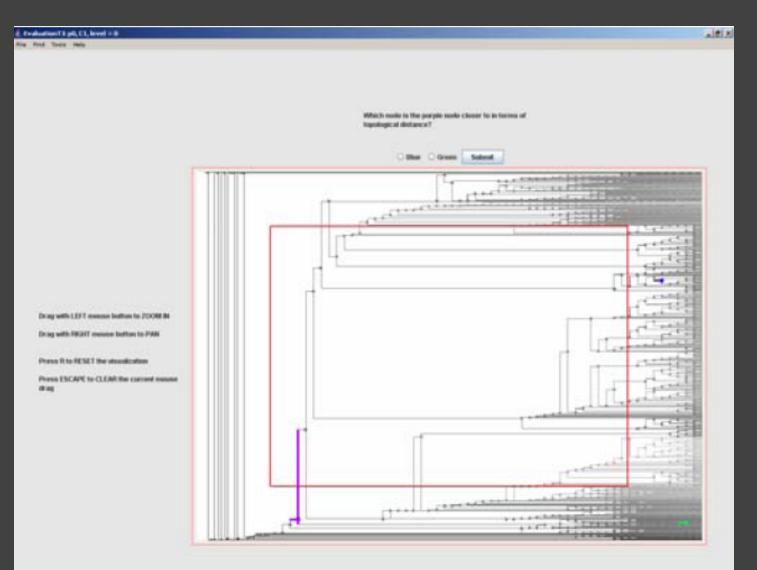

#### Experiment

Compare performance in 4 conditions:

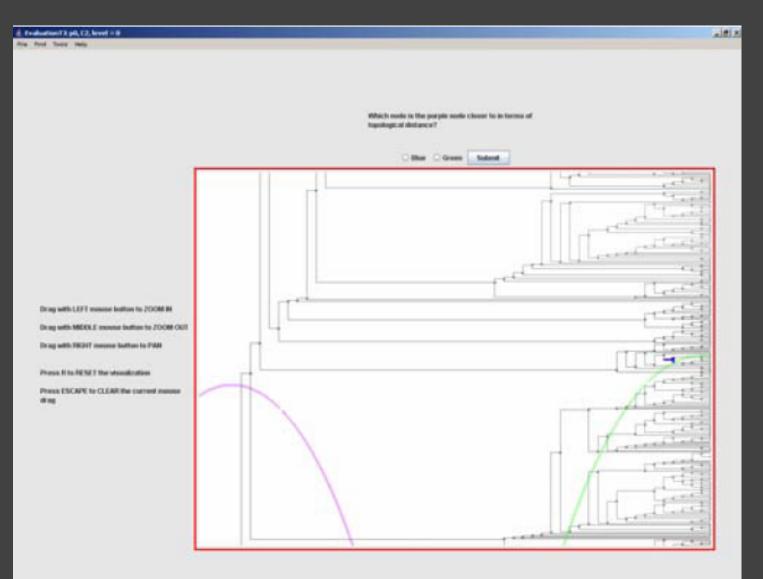

- 1. Pan & Zoom (no overview)
- 2. Pan & Zoom (with overview)
- 3. Rubber Sheet (no overview)
- 4. Rubber Sheet (with overview)

40 subjects (24F/16M), between 18-39 years old. Right-handed, normal vision. Between-subjects design.

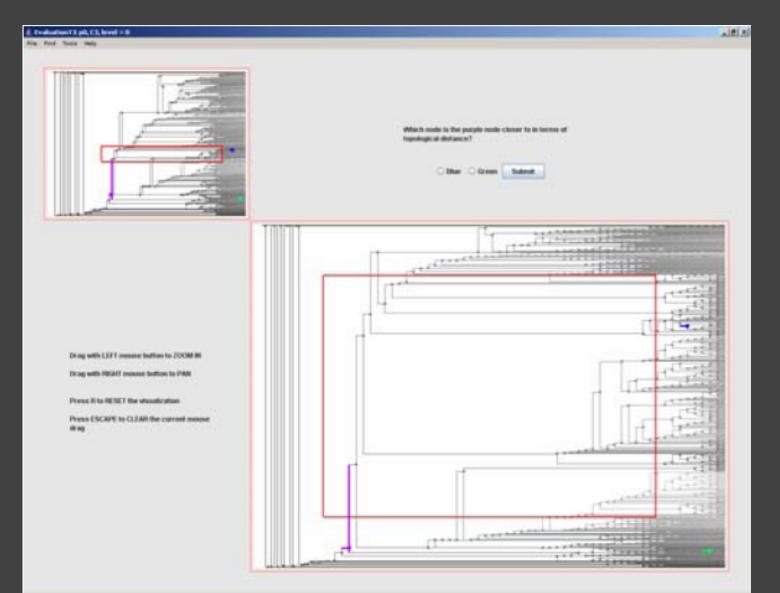

#### 1. Rubber Sheet / No Overview

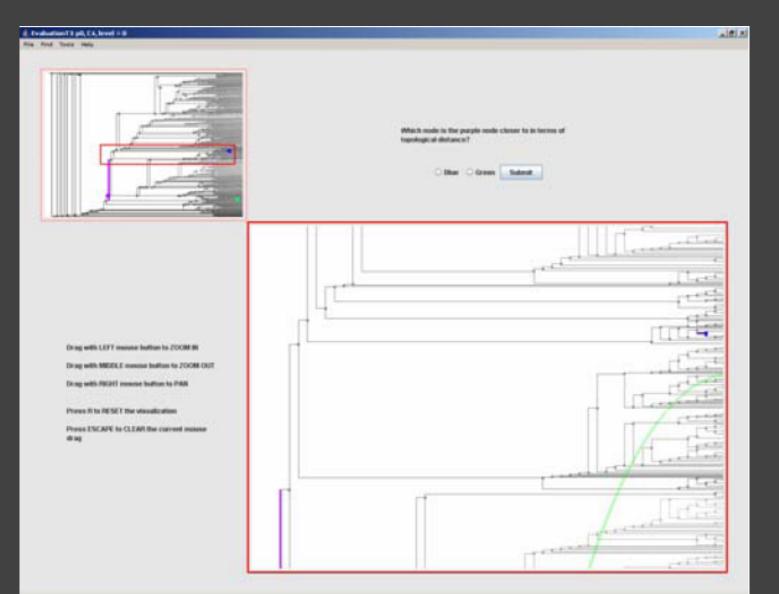

#### 2. Pan & Zoom / No Overview

#### 3. Rubber Sheet / Overview

#### 4. Pan & Zoom / Overview

# Hypotheses

- RSN interfaces perform better than PZN interfaces independently of the presence or absence of an overview.
- 2. For RSN, the presence of an overview does not result in better performance.
- 3. For PZN, the presence of an overview results in better performance.

## Results: H1 False

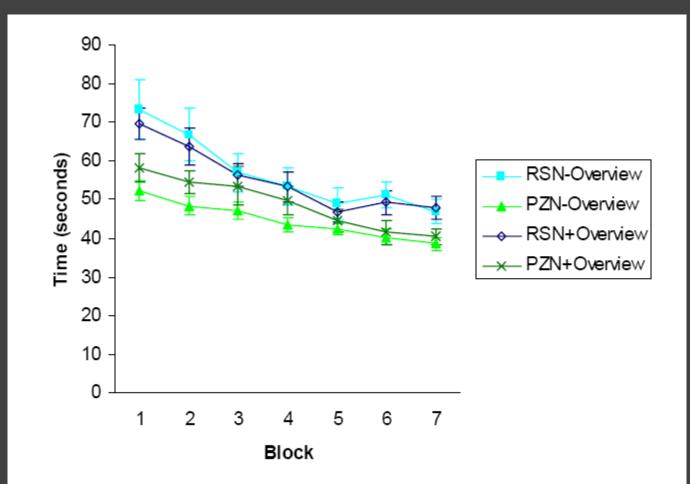

Figure 7: Mean completion times per trial for each interface by block in seconds (N=40).

## Results: H2 True, H3 False

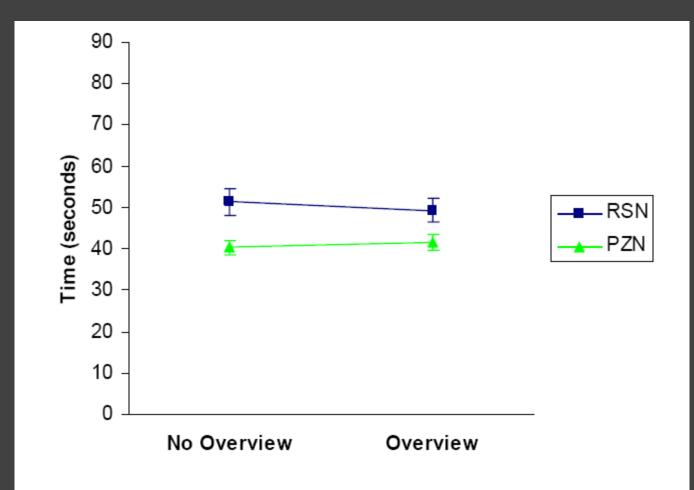

Figure 9: Block 7 mean per-trial completion times in seconds by navigation technique with and without an overview.

## Results

R1. Pan & Zoom had lower completion times, navigation actions, resets, and reported mental demand.

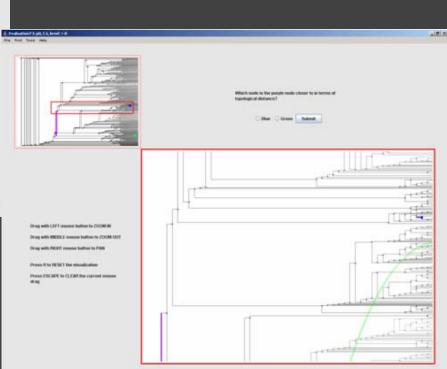

R2. Overview has no significant impact on rubber sheet navigation, though it was reported to reduce physical demand.

R3. Overview has no significant impact on pan & zoom navigation, though it was reported to reduce physical demand.

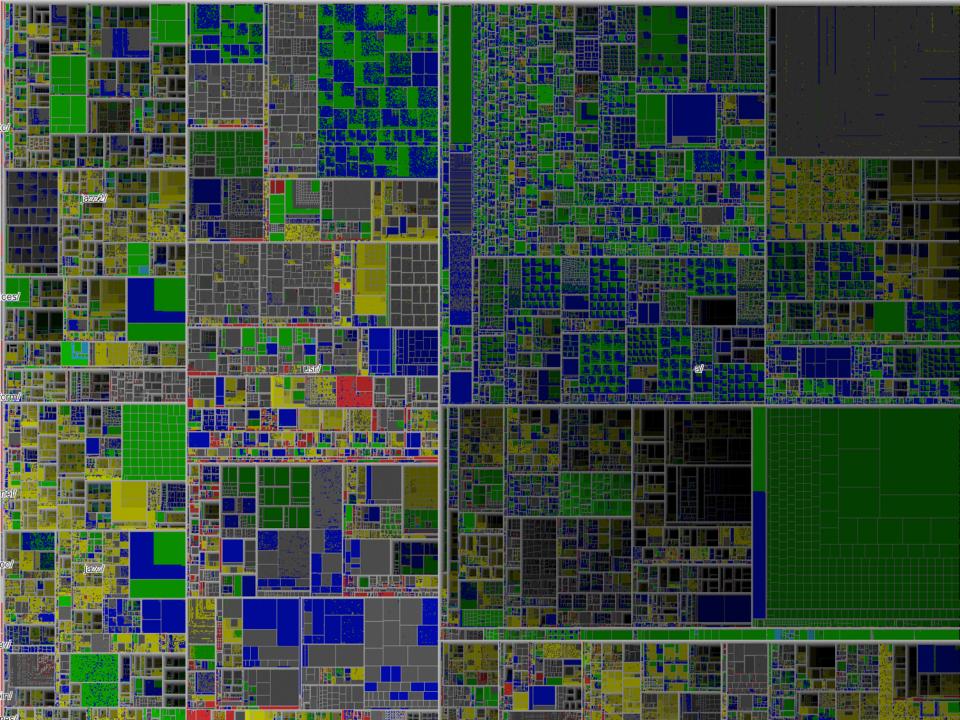

# Thoughts?

🗶 Evaluation T.I. pd, C.I. level = 8	5.5k
	Mine: 3 mode is it for paragole mode chosen is to be not set topological distance of C Mine C Grown Laboratory

Does this generalize for overview displays?

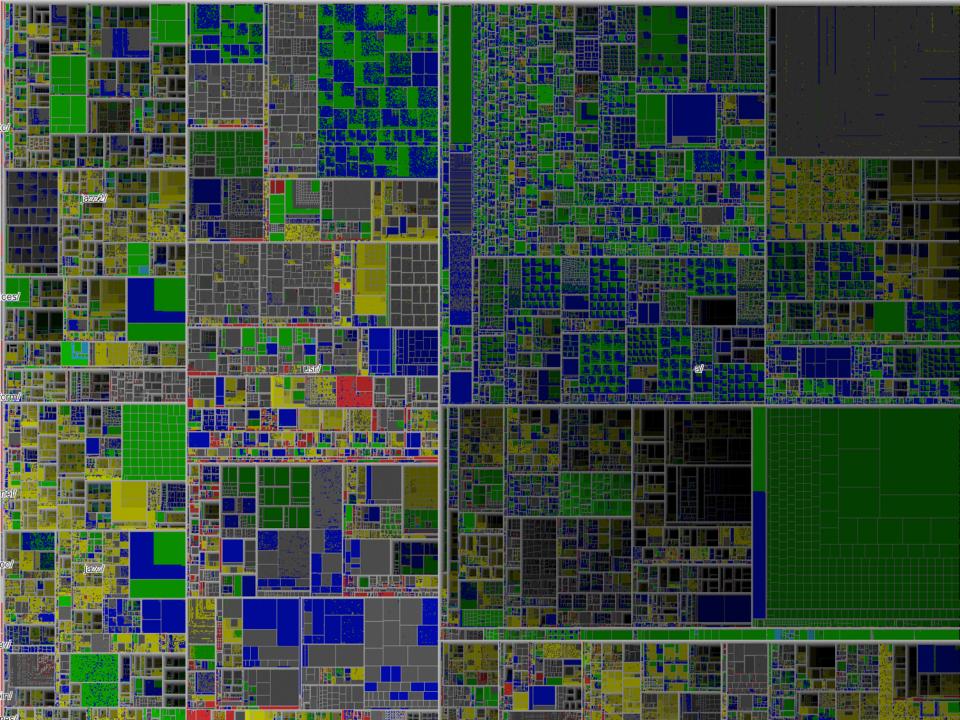

Data Density

# Data Density = $\frac{(\text{# entries in data})}{(\text{area of graphic})}$

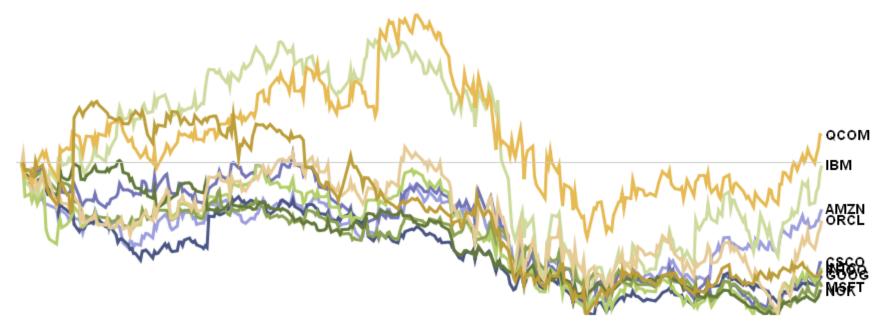

"Graphical excellence... gives to the viewer the greatest number of ideas in the shortest time with the least ink in the smallest space"

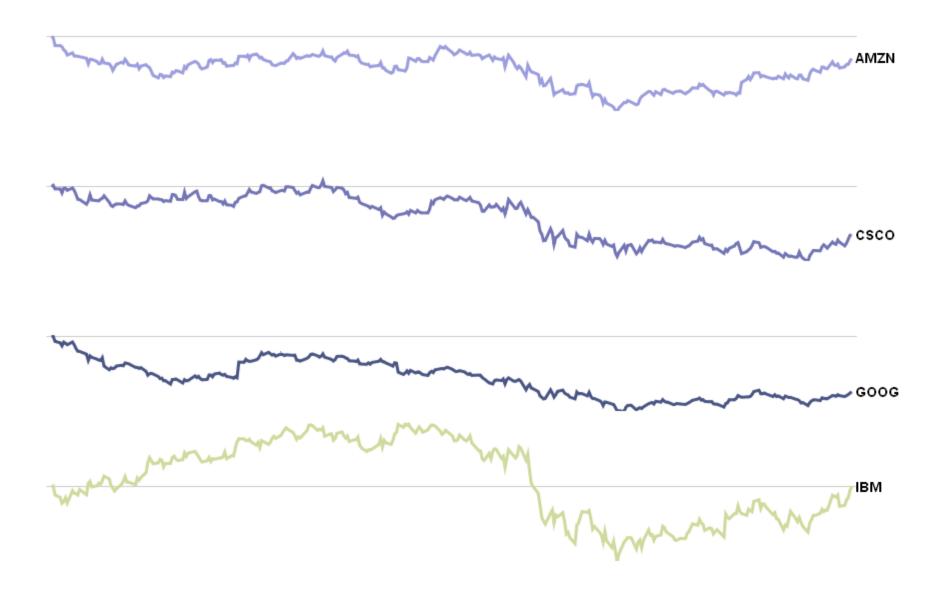

[Tufte 83]

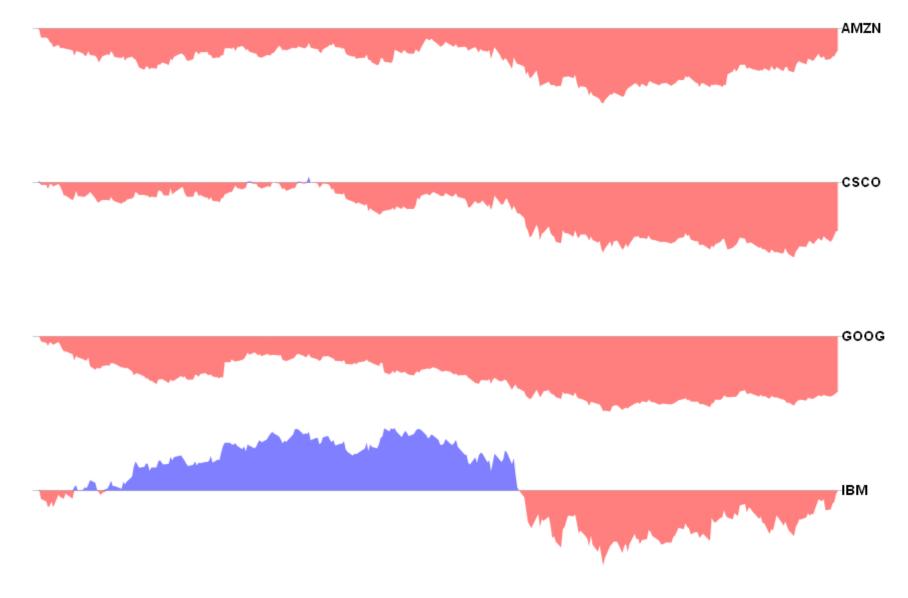

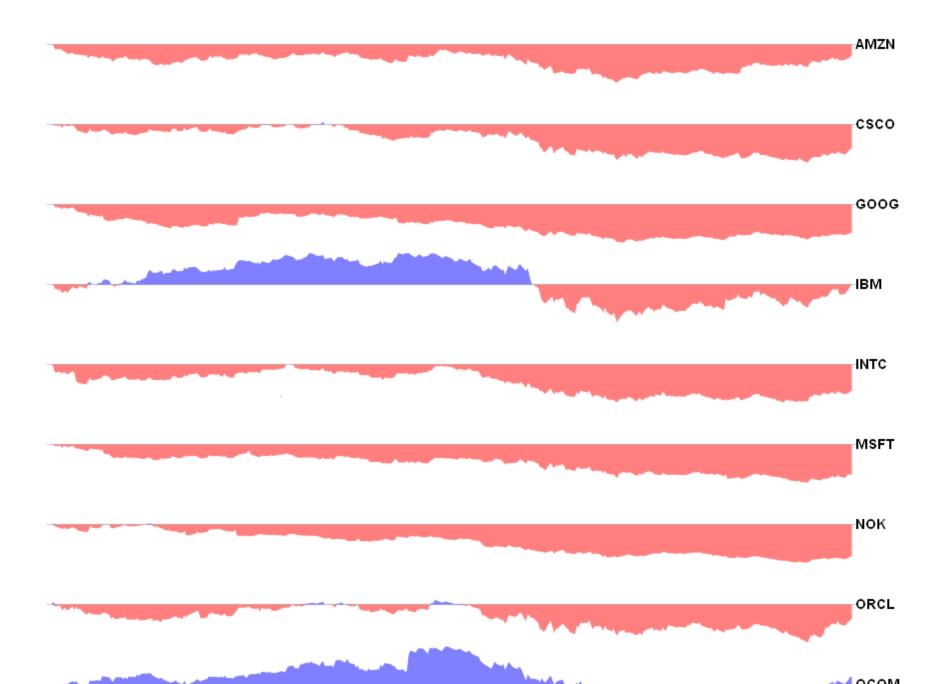

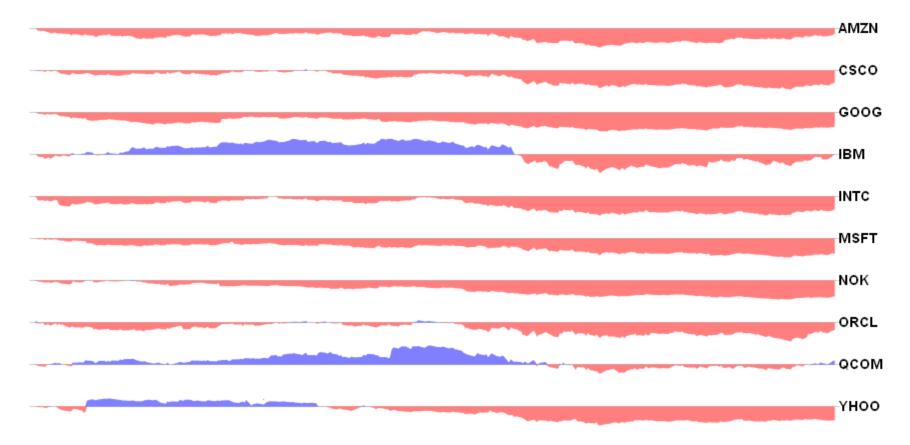

AMZN

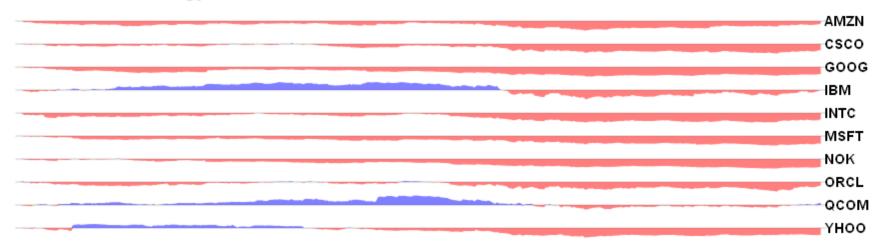

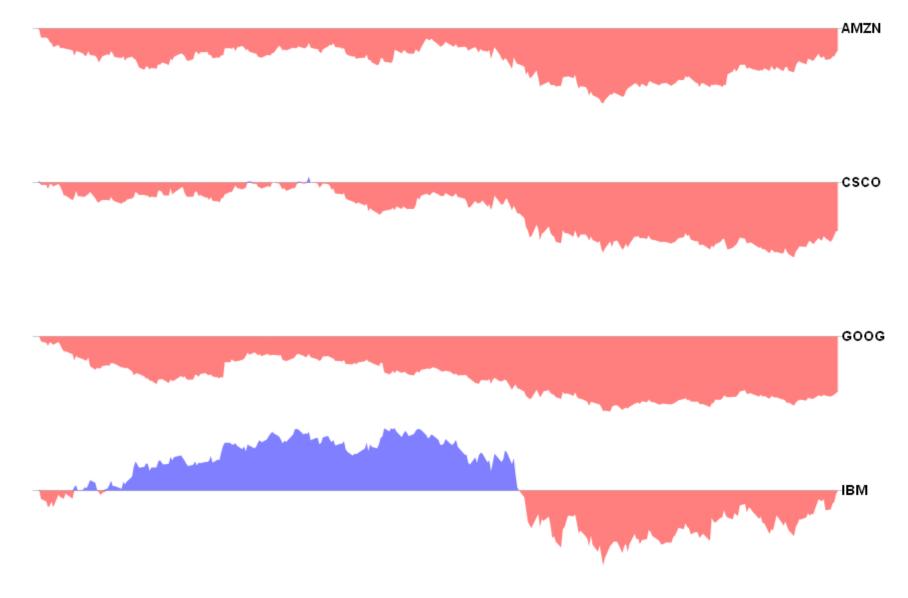

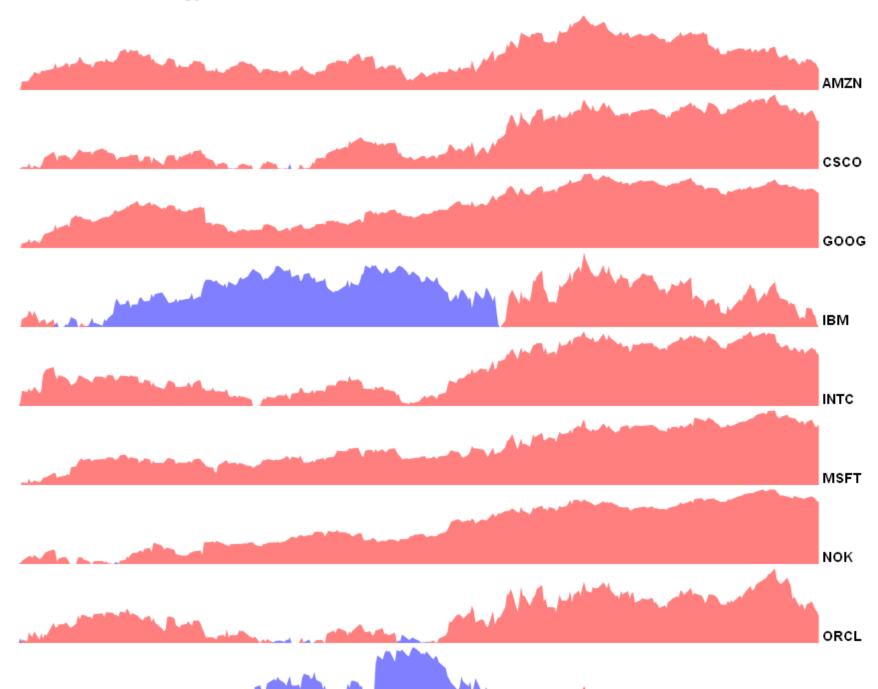

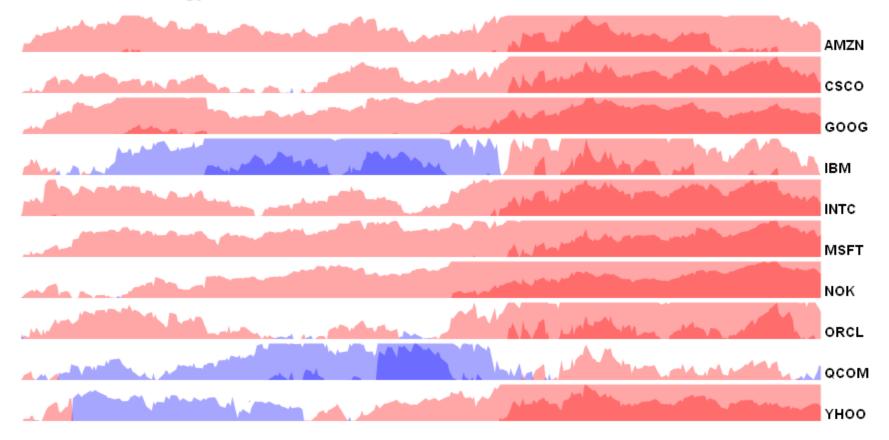

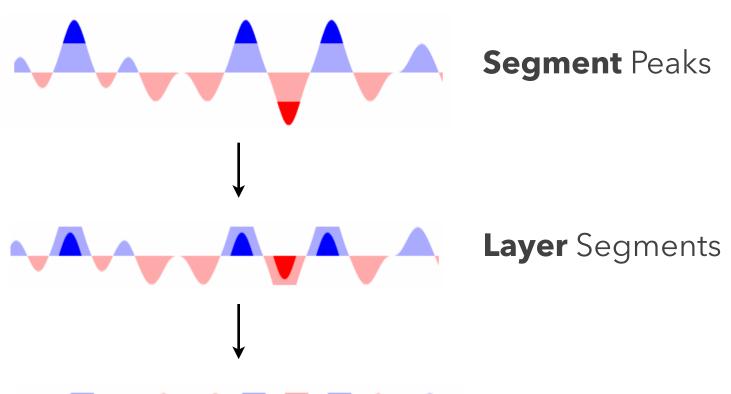

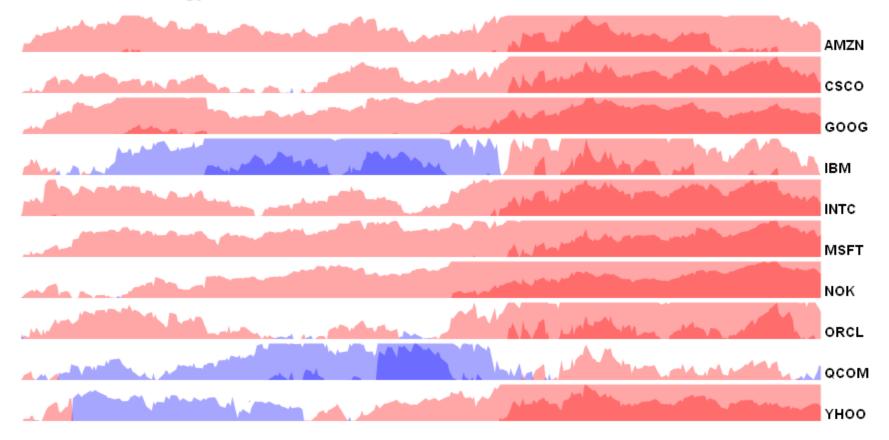

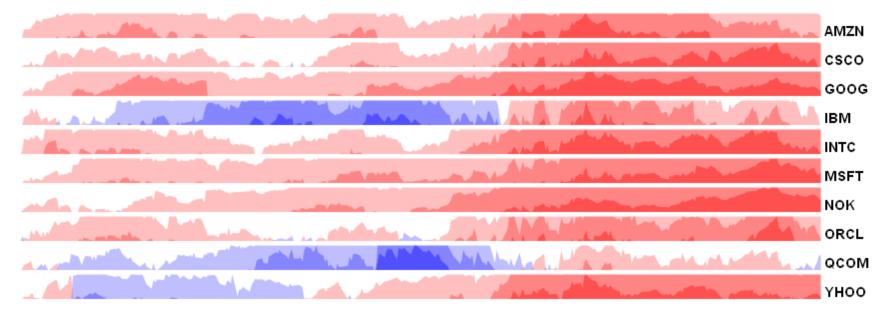

## Horizon Graphs

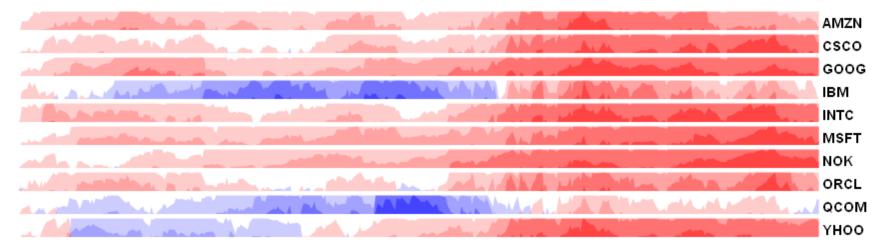

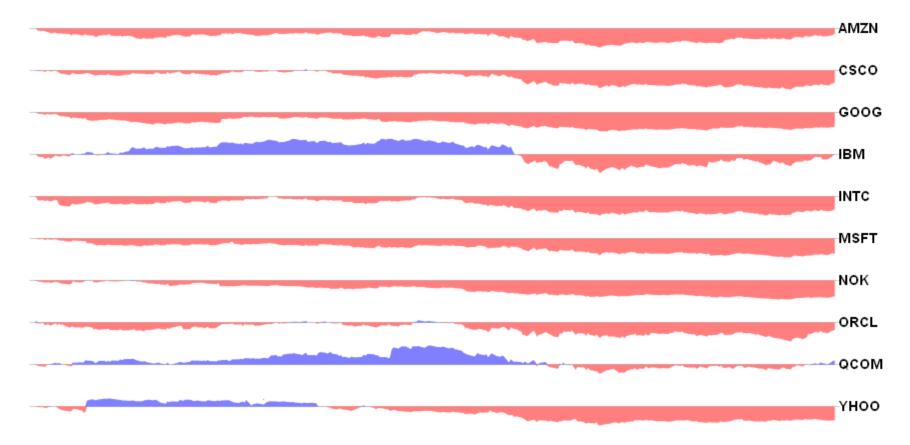

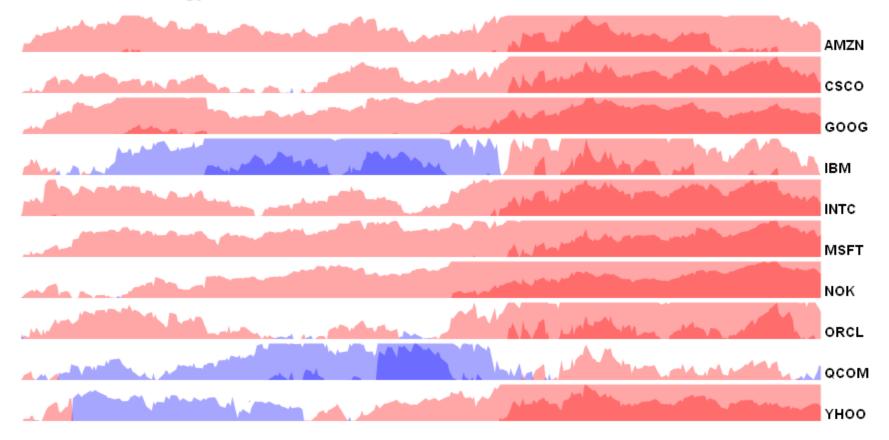

Mirror Negative Values

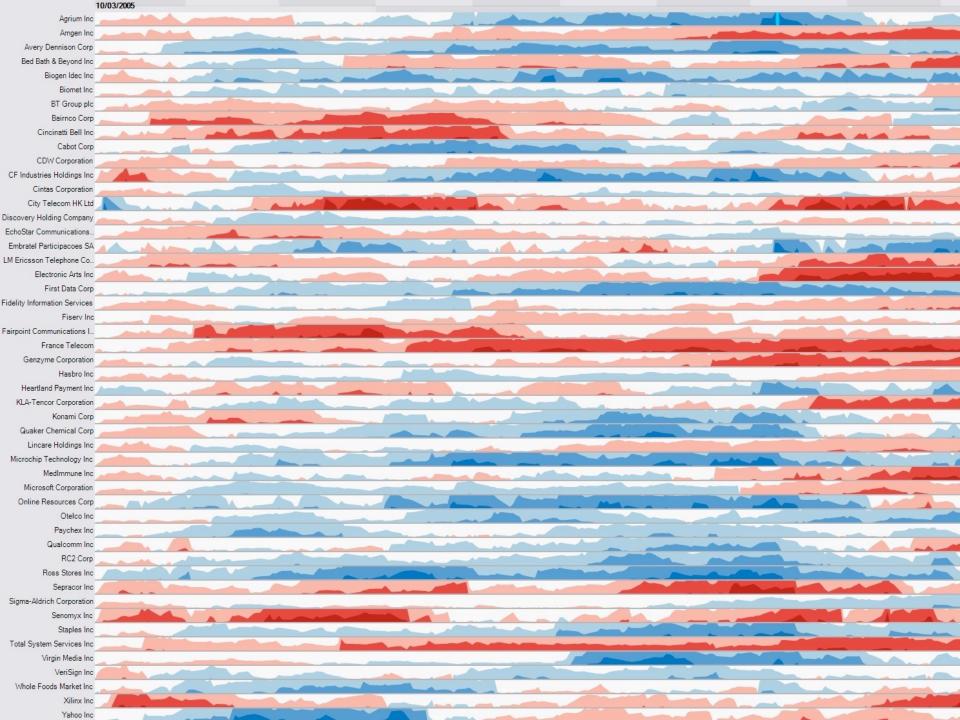

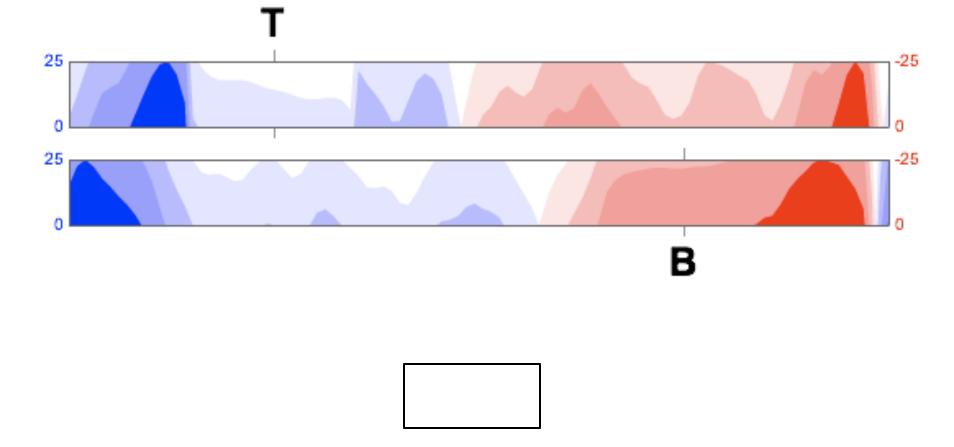

## **Experiment: Chart Type & Size**

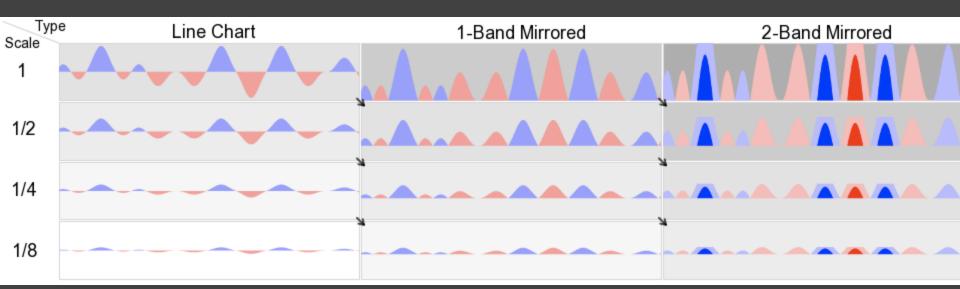

**Q1**: How do mirroring and layering affect estimation time and accuracy compared to line charts?

**Q2**: How does chart size affect estimation time and accuracy?

Estimate the difference between T and B (0-200) to within 5 values.

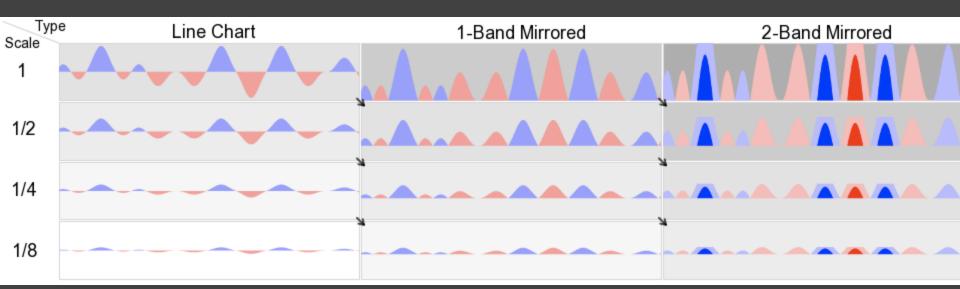

## **Experiment Design**

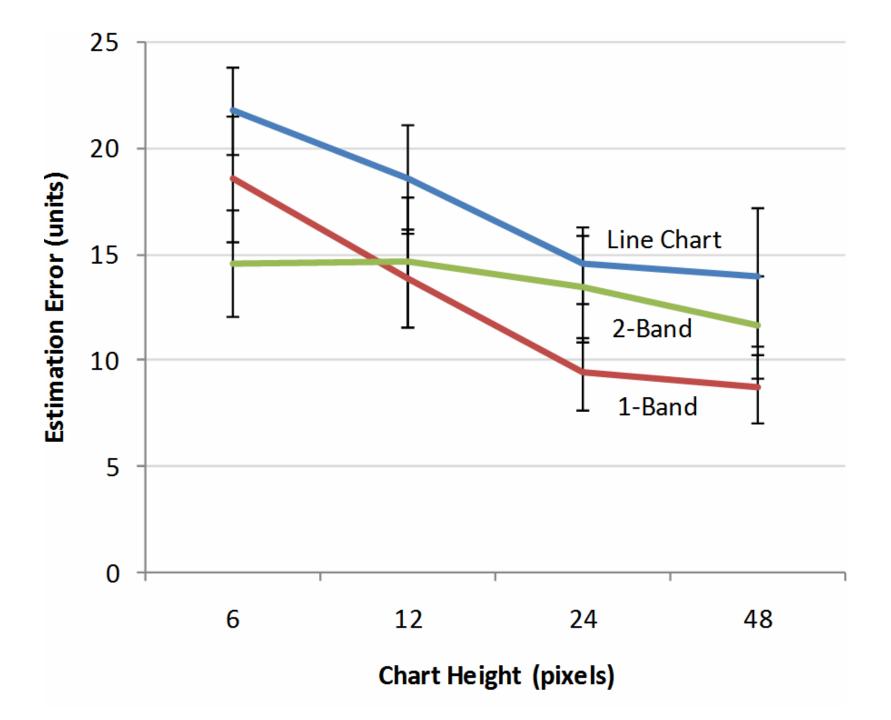

3 (chart type) x 4 (size) within-subjects design

- $\cdot$  N = 30 (17 male, 13 female), undergrads
- 14.1 inch LCD display, 1024 x 768 resolution
- At scale = 1, chart is 13.9 x 1.35 cm (48 px)

## **Experiment Design**

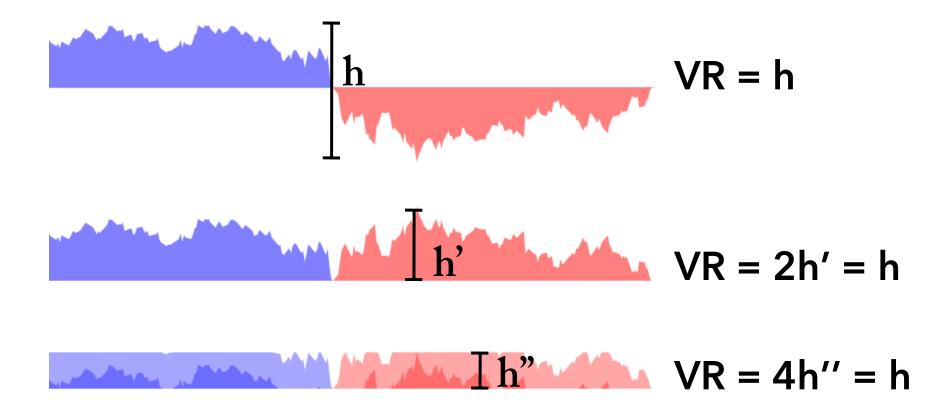

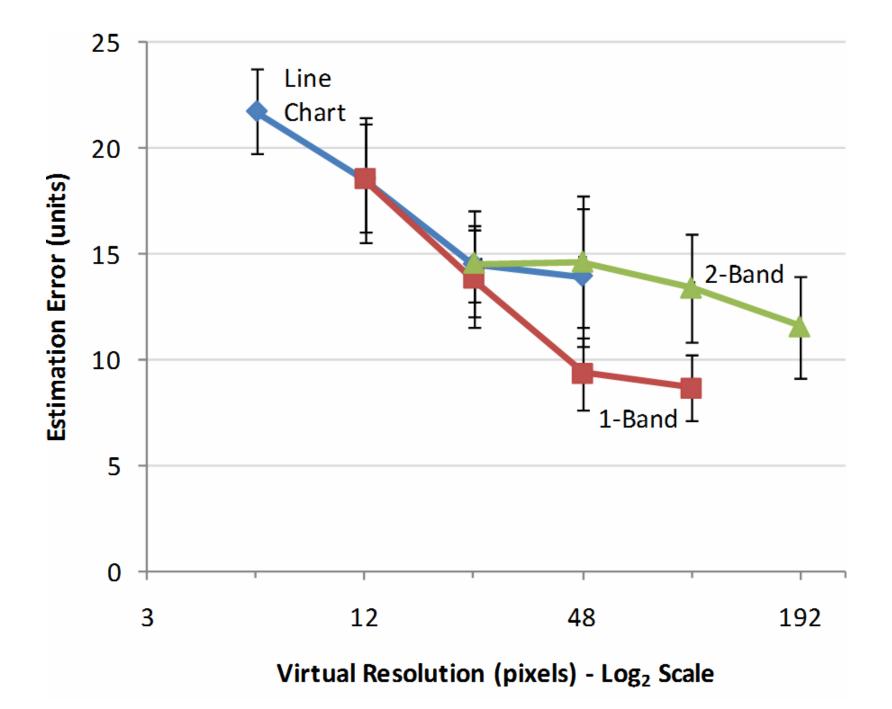

3 (type) x 4 (size) within-subjects design N = 30 (17 male, 13 female), undergrads 2 (type) x 3 (size:1/8, 1/12, 1/24) follow-up N = 8 (6 male, 2 female), engineering grads

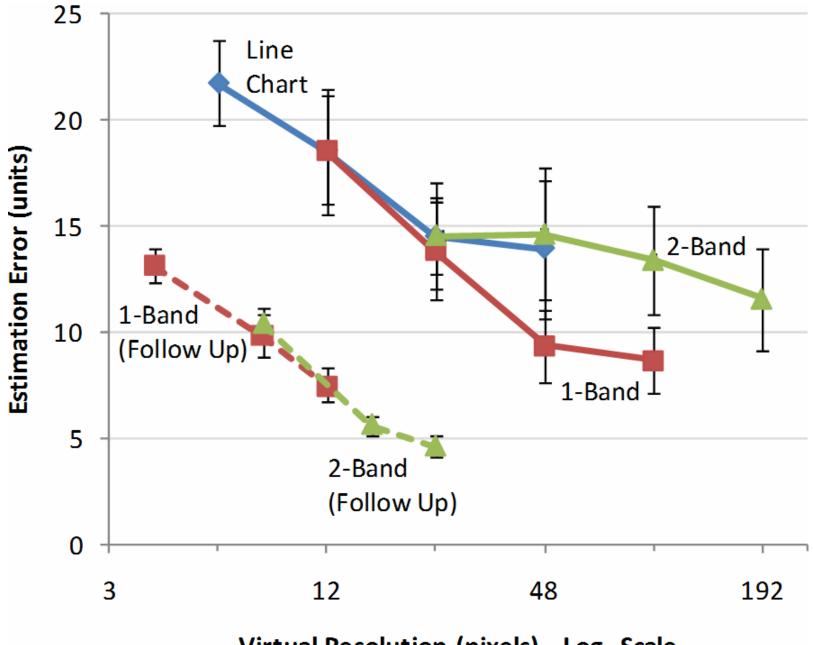

## Virtual Resolution (VR)

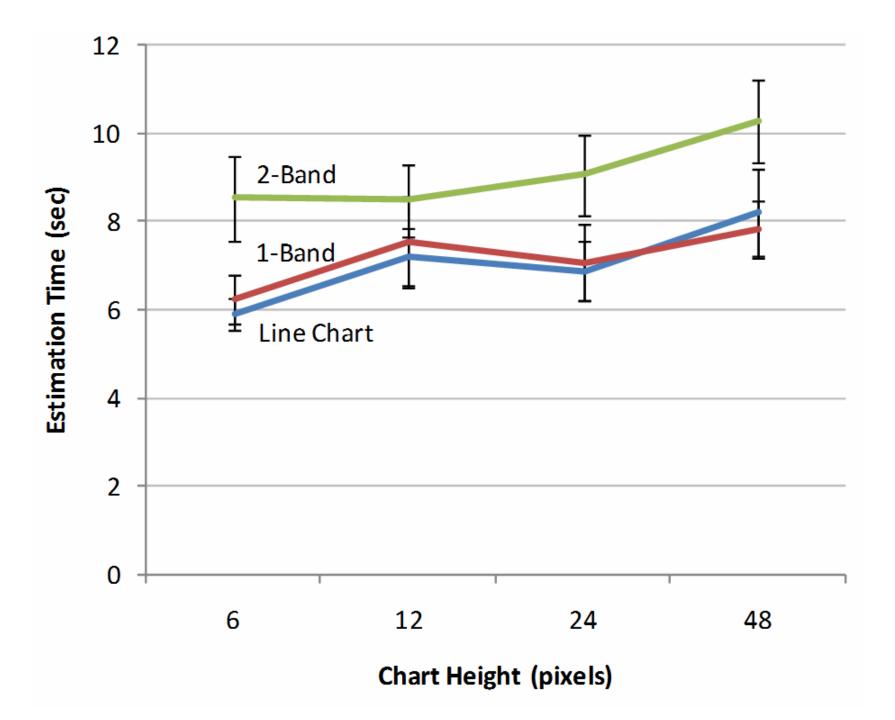

The un-mirrored, un-layered height of a chart

Virtual Resolution (pixels) - Log<sub>2</sub> Scale

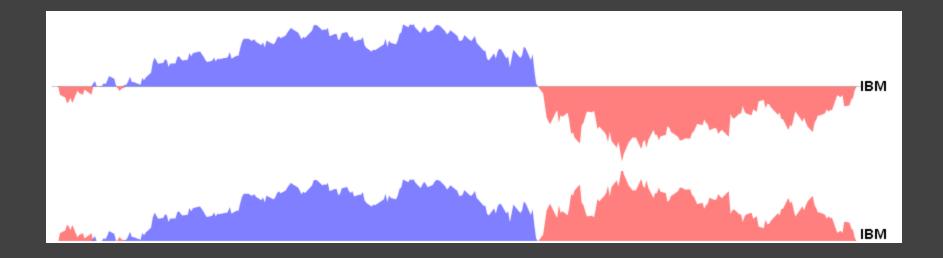

#### **Experiment Results**

**Q1**: 2-band horizon graph (but not mirrored graph) has higher baseline estimation time and error.

**Q2**: Estimation error increases as the *virtual resolution* decreases. Estimation time decreases as the *physical height* decreases.

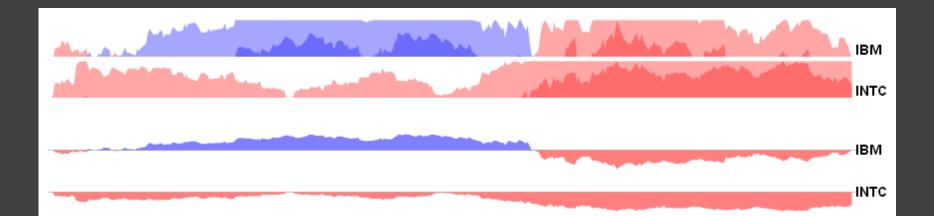

#### **Design Guidelines**

#### Mirroring does not hamper perception

## **Design Guidelines**

Mirroring does not hamper perception Layered bands beneficial for smaller charts 2-band mirror charts more accurate for heights under 6.8mm (24 pixels @ 1024x768) Predict benefits for 3 bands under 1.7mm (6 px)

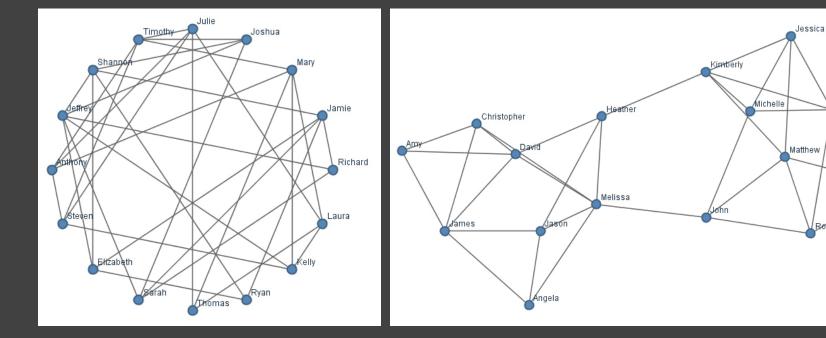

## Design Guidelines

Mirroring does not hamper perception Layered bands beneficial for smaller charts **Optimal chart sizing Sweet spots** in time/error curves 6.8mm (24 px) for line chart & mirrored chart 3.4mm (12 px) for 2-band horizon graph FOLLOW-UP QUESTION: What other **tasks** and **performance measures** should one test?

# Perceptual Organization of Node-Link Diagrams

#### **Perceptual Organization of Graphs**

Circular

#### Force-Directed

Brian

Robert

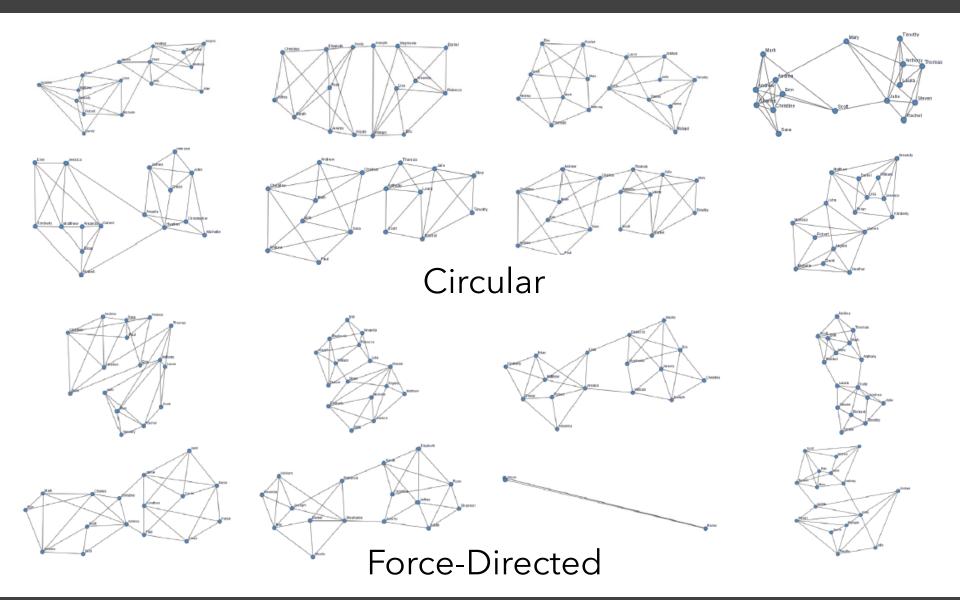

Lisa

### **Experiment Design**

#### Factors

Circular or Force-Directed Seed Layout # of Between-Cluster Edges ("masking") All graphs had two primary clusters

Measures # of Edge Crossings Average Edge Length Average Node Distance within or between clusters

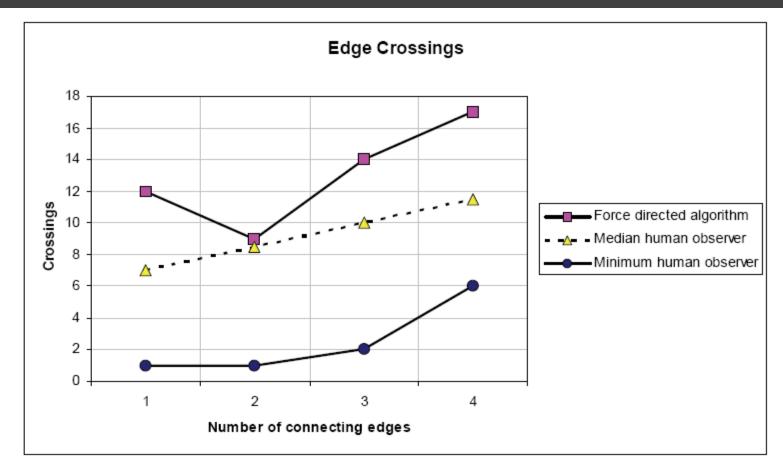

Figure 4. Edge Crossings. Human observers produced graph layouts with fewer edge crossings than the force-directed graph algorithm.

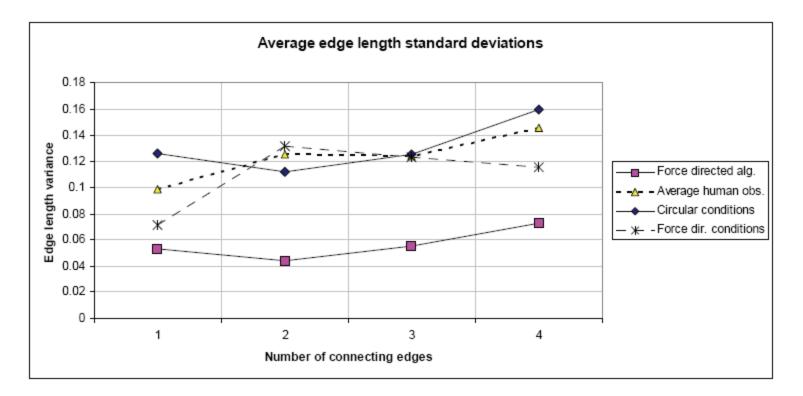

Figure 5. Edge Length Distribution. Human observers did not focus on maintaining equal edge length as much as the force directed algorithm.

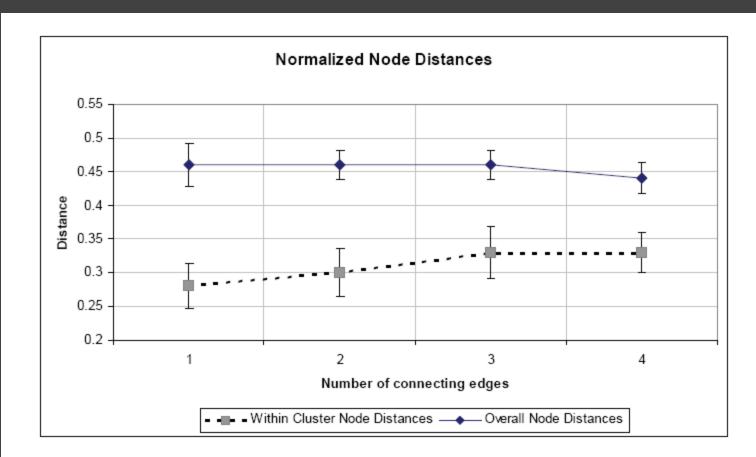

Figure 7. Cluster Extraction. For all levels of masking, the distance between nodes within a cluster is significantly smaller than the overall inter-node distance, demonstrating perceptual grouping. Error bars show 95% confidence intervals

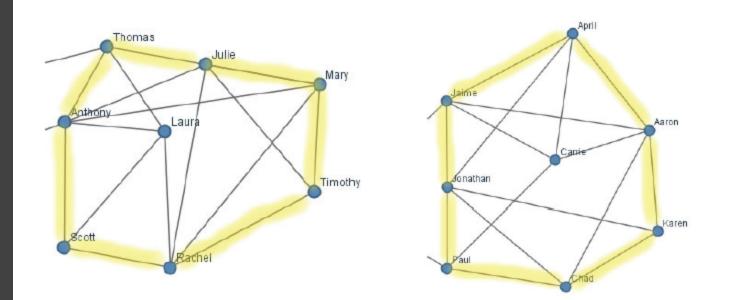

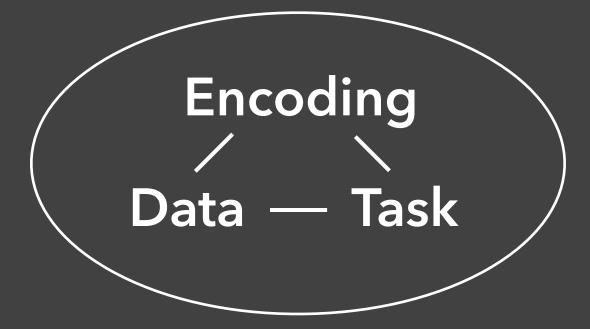

Figure 9. Cluster Hulls. Two examples of user-generated layouts where cluster edges formed a hull enclosing the cluster, organizing it into a single perceptual group.

### Summary

Design and analyze visualization techniques in context of real-world use.

Time/error analyses can be insightful, but they don't provide a complete picture.

Performance measures may be more suited to serious analysis than casual use?

### **Final Project Deliverables**

**Interactive Web Page** Working (near-final) version due Wed 5/31. Final version due by showcase on Mon 6/5.

**Demonstration Video** (<= 2 min) Due Wed 5/31. We will show in-class on 6/1!

**Poster & Demo for Final Showcase** Monday 6/5, 10:30am-1pm in Allen Center atrium. External judges will award top projects!

Read assignment description for more!

### Final Project Showcase

**When:** Monday June 5, 10:30am - 1pm. **Where:** Allen Center Atrium

The event is open to the public. Invite your friends!

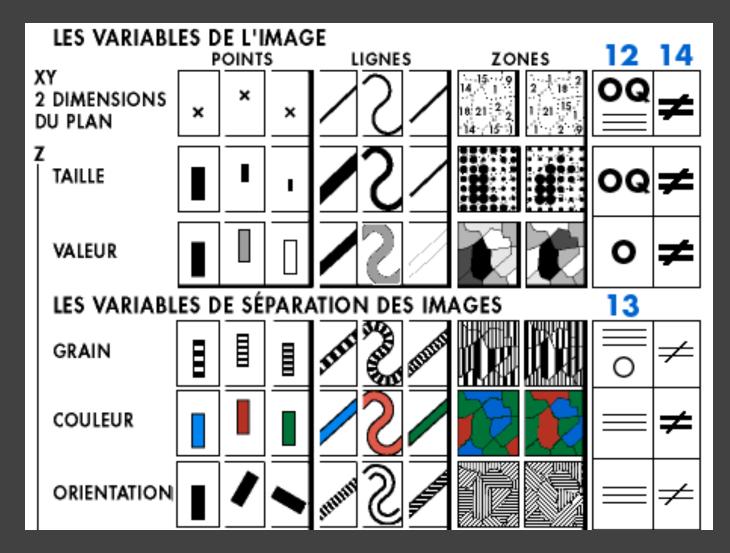

Public showing begins at 11am. Arrive at 10:30am to set up your poster and demo. Be prepared to give a ~3 min. presentation + demo to visitors.

Invited judges will rate & award the top projects.

Refreshments will be served!
