

CSE 442 - Data Visualization

Color

Jeffrey Heer University of Washington

Color in Visualization

Identify, Group, Layer, Highlight

Purpose of Color

To label

To measure

To represent and imitate

To enliven and decorate

"Above all, do no harm."

- Edward Tufte

Topics

Perception of Color

Light, Visual system, Mental models

Color in Information Visualization

Categorical & Quantitative encoding

Guidelines for color palette design

Perception of Color

What color is this?

What color is this?

"Yellow"

What color is this?

Purple line

Mixture of two lights appears as a straight line.

CIE Chromaticity Diagram

Spectrum locus

Purple line

Mixture of two lights appears as a straight line.

Display Gamuts

Typically defined by:

3 Colorants

Convex region

Display Gamuts

Deviations from
sRGB specification

Example:

(R, G, B) coordinates
ranging from 0-255.

Displays may
produce different
colors for a coord!

Color Vision Deficiency (CVD)

Missing one or more cones or rods in retina.

Primary Colors

To paint "all colors":

Leonardo da Vinci, circa 1500 described in his notebooks a list of simple colors...

Yellow

Blue

Green

Red

Opponent Processing

LMS are combined to create:

Lightness

Red-green contrast

Yellow-blue contrast

[Fairchild]

Opponent Processing

LMS are combined to create:

Lightness

Red-green contrast

Yellow-blue contrast

Opponent Processing

LMS are combined to create:

Lightness

Red-green contrast

Yellow-blue contrast

Experiments:

No reddish-green, no blueish-yellow

Color after images

CIE LAB and LUV Color Spaces

Standardized in 1976 to mathematically represent opponent processing theory.

Non-linear transformation of CIE XYZ

CIE LAB Color Space

Axes correspond to opponent signals

L* = Luminance

a* = Red-green contrast

b* = Yellow-blue contrast

Much more perceptually uniform than sRGB!

Scaling of axes to represent "color distance"

JND = Just noticeable difference (~2.3 units)

D3 + Vega include LAB color space support!

Issues:

Too many colors

Hard to remember mapping

Colors not distinctive, some are very similar

Poor grouping: similar colors, different values

Labels cause clutter

Color surround effects

Colors interactions may not look good together

Palette Design & Color Names

Minimize overlap and ambiguity of colors.

Quantitative Color

Rainbow Color Maps

Be Wary of Naïve Rainbows!

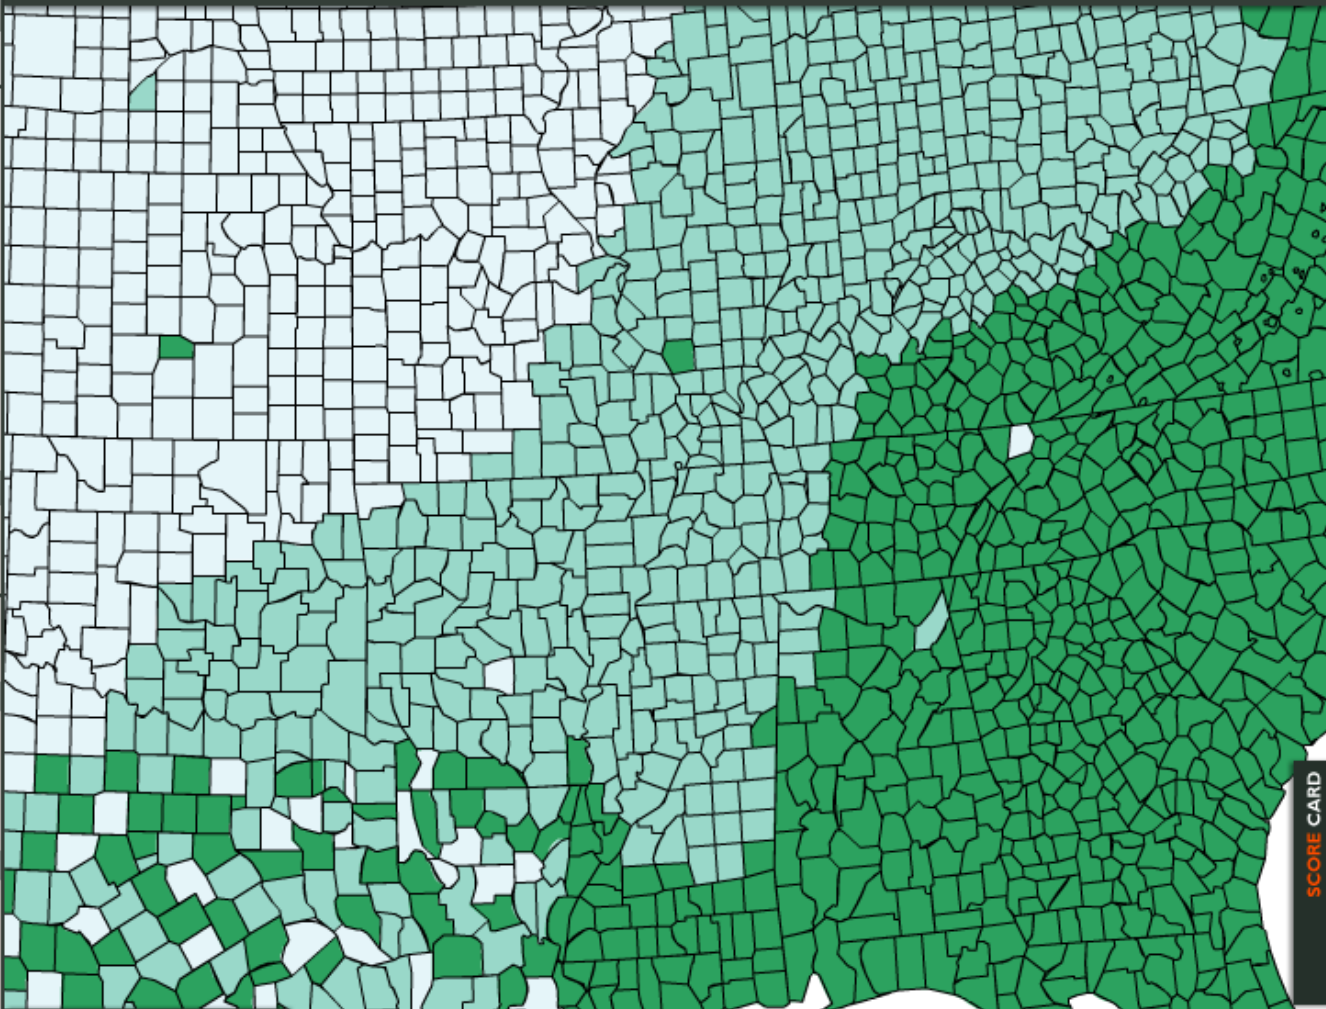

1. Hues are not naturally ordered
2. People segment colors into classes, perceptual banding
3. Naive rainbows are unfriendly to color blind viewers
4. Some colors are less effective at high spatial frequencies

RGB CMYK HEX

SCORE CARD

AGE-ADJUSTED DEATH RATES BY HSA, 1988-92

HEART DISEASE
WHITE MALE

Classing Quantitative Data

Age-adjusted mortality rates for the United States.
Common option: break into 5 or 7 quantiles.

Classing Quantitative Data

1. Equal interval (arithmetic progression)
2. Quantiles (***recommended***)
3. Standard deviations
4. Clustering (Jenks' natural breaks / 1D K-Means)
 - Minimize within group variance
 - Maximize between group variance

Quantitative Color Encoding

Sequential color scale

Ramp in luminance, possibly also hue

Higher value -> darker color (or vice versa)

Quantitative Color Encoding

Sequential color scale

Ramp in luminance, possibly also hue

Higher value -> darker color (or vice versa)

Diverging color scale

Useful when data has meaningful "midpoint"

Use neutral color (e.g., grey) for midpoint

Use saturated colors for endpoints

Quantitative Color Encoding

Sequential color scale

Ramp in luminance, possibly also hue

Higher value -> darker color (or vice versa)

Diverging color scale

Useful when data has meaningful "midpoint"

Use neutral color (e.g., grey) for midpoint

Use saturated colors for endpoints

Limit number of steps in color to 3-9

Why?

Quantitative Color Encoding

Sequential color scale

Ramp in luminance, possibly also hue

Higher value -> darker color (or vice versa)

Diverging color scale

Useful when data has meaningful "midpoint"

Use neutral color (e.g., grey) for midpoint

Use saturated colors for endpoints

Limit number of steps in color to 3-9

Avoid simultaneous contrast, hold mappings in memory

Sequential Scales: Single-Hue

Ramp primarily in luminance, subtle hue difference

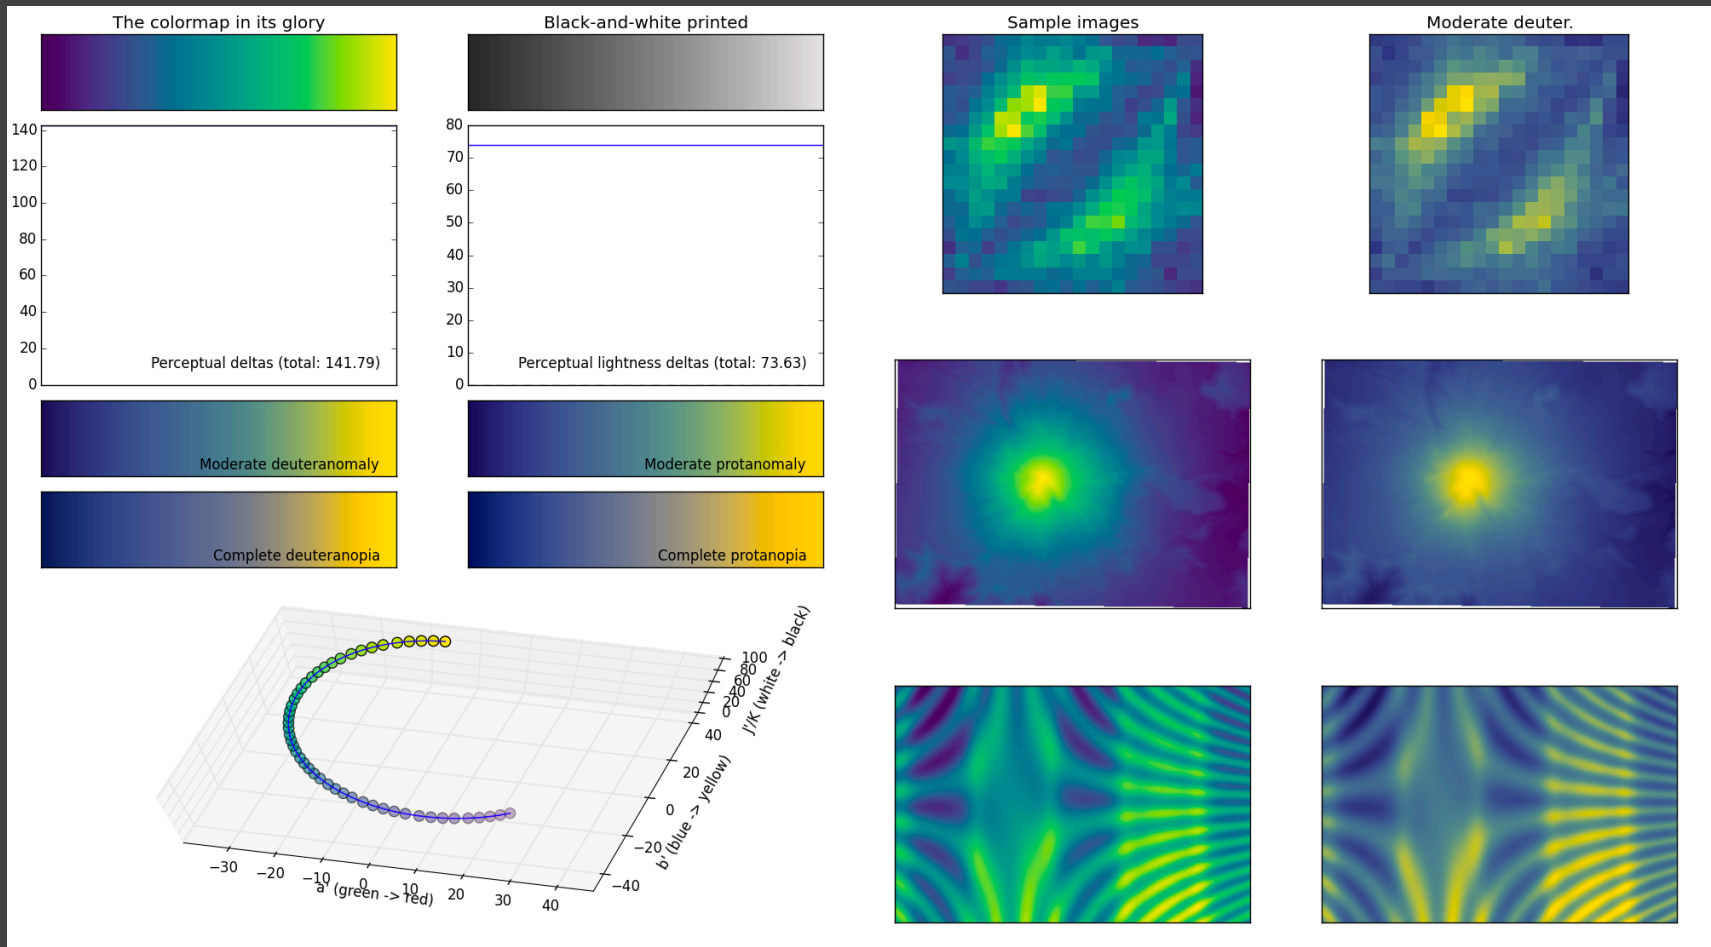

Sequential Scales: Multi-Hue

Ramp luminance & hue in perceptual color space
Avoid contrasts subject to color blindness!

Sequential Scales: Multi-Hue

Diverging Color Scheme

Designing Diverging Scales

Designing Diverging Scales

Hue Transition

Carefully Handle Midpoint

Choose classes of values

Low, Average, High - Average should be gray

Critical Breakpoint

Defining value e.g., 0

Positive & negative should use different hues

Extremes saturated, middle desaturated

Hints for the Colorist

Use **only a few** colors (~6 ideal)

Colors should be **distinctive** and **named**

Strive for color **harmony** (natural colors?)

Use **cultural conventions**; appreciate symbolism

Get it right in **black and white**

Respect the **color blind**

Take advantage of **perceptual color spaces**

Color is cultural and a matter of taste!
