

CSE 512 - Data Visualization

# The Value of Visualization

Jeffrey Heer University of Washington

**How much data (bytes)  
did we produce in 2010?**

**2010: 1,200 exabytes**  
and exponential growth...

Gantz et al., 2008, 2010

**But *what* is in  
all this data?**

Physical Sensors

*Image courtesy cabspotting.org*

Health & Medicine

Records of Human Activity

The ability to take data—to be able to **understand** it, to **process** it, to **extract value** from it, to **visualize** it, to **communicate** it—that's going to be a hugely important skill in the next decades, ... because now we really do have **essentially free and ubiquitous data**. So the complimentary scarce factor is the ability to understand that data and extract value from it.

Hal Varian, Google's Chief Economist  
*The McKinsey Quarterly*, Jan 2009

**But wait!**

The ability to take data—to be able to **understand** it, to **process** it, to **extract value** from it, to **visualize** it, to **communicate** it—that's going to be a hugely important skill in the next decades, **"free" to whom?** because now we really do have **essentially free and ubiquitous data**. So the complimentary scarce factor is **"ubiquitous" about whom?** and extract value from it. **...to whose benefit?**

Hal Varian, Google's Chief Economist  
*The McKinsey Quarterly*, Jan 2009

High potential for data abuse...

How might we use **visualization**  
to **empower understanding** of  
data and analysis processes?

# What is Visualization?

"Transformation of the symbolic into the geometric"

[McCormick et al. 1987]

"... finding the artificial memory that best supports our natural means of perception." [Bertin 1967]

"The use of computer-generated, interactive, visual representations of data to amplify cognition."

[Card, Mackinlay, & Shneiderman 1999]

## Set A

Wikipedia History Flow [Viegas & Wattenberg]

A complex visualization of Wikipedia's edit history. The image shows a dense, multi-layered structure of horizontal lines in various colors (purple, pink, orange, green, blue, and black) that form a jagged, wavy pattern. The lines are stacked vertically, creating a sense of depth and complexity. The overall shape is roughly rectangular but with irregular, wavy edges. The text "Edit War..." is overlaid in the upper right, and "Wikipedia History Flow [Viegas & Wattenberg]" is at the bottom.

**Edit War...**

# Data in Context: Cholera Outbreak

In 1854 John Snow plotted the position of each cholera case on a map. [from Tufte 83]

# Data in Context: Cholera Outbreak

Used map to hypothesize that pump on Broad St. was the cause. [from Tufte 83]

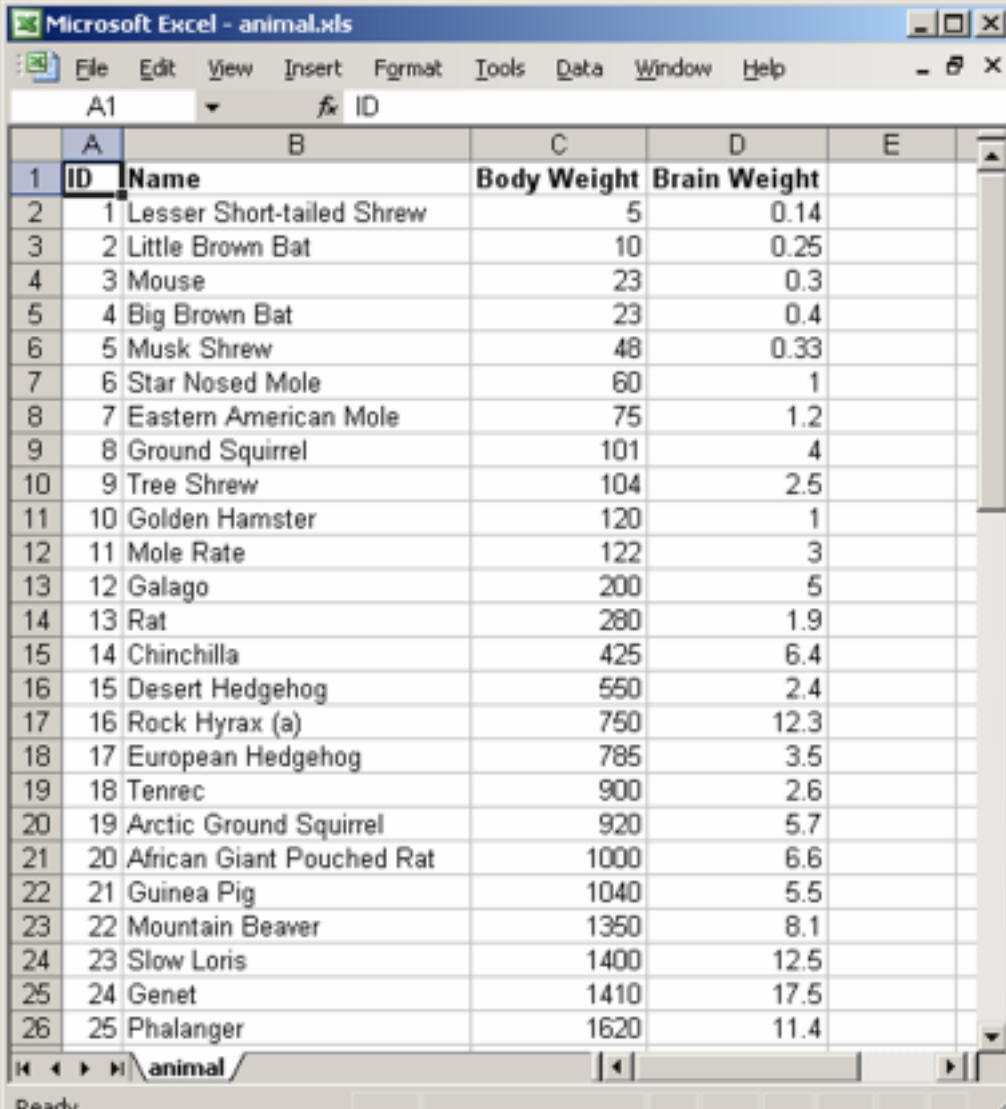

# Find Patterns: NYC Weather

NEW YORK CITY'S WEATHER FOR 1980

[New York Times 1981]

# Answer Questions: Brain Power?

A screenshot of a Microsoft Excel spreadsheet titled "animal.xls". The spreadsheet contains a table with 4 columns: ID, Name, Body Weight, and Brain Weight. The data is organized into rows, with the first row (row 1) serving as the header. The table lists 25 different animals, each with a unique ID, name, body weight, and brain weight. The interface includes the standard Excel menu bar (File, Edit, View, Insert, Format, Tools, Data, Window, Help) and a status bar at the bottom indicating "Ready".

ID	Name	Body Weight	Brain Weight
1	Lesser Short-tailed Shrew	5	0.14
2	Little Brown Bat	10	0.25
3	Mouse	23	0.3
4	Big Brown Bat	23	0.4
5	Musk Shrew	48	0.33
6	Star Nosed Mole	60	1
7	Eastern American Mole	75	1.2
8	Ground Squirrel	101	4
9	Tree Shrew	104	2.5
10	Golden Hamster	120	1
11	Mole Rate	122	3
12	Galago	200	5
13	Rat	280	1.9
14	Chinchilla	425	6.4
15	Desert Hedgehog	550	2.4
16	Rock Hyrax (a)	750	12.3
17	European Hedgehog	785	3.5
18	Tenrec	900	2.6
19	Arctic Ground Squirrel	920	5.7
20	African Giant Pouched Rat	1000	6.6
21	Guinea Pig	1040	5.5
22	Mountain Beaver	1350	8.1
23	Slow Loris	1400	12.5
24	Genet	1410	17.5
25	Phalanger	1620	11.4

# The Value of Visualization

**Record** information

Blueprints, photographs, seismographs, ...

**Analyze** data to support reasoning

Develop and assess hypotheses

Find patterns / Discover errors in data

Expand memory

**Convey** information

Communicate, inform, inspire

Collaborate and revise

# Goals of Visualization Research

## **1 Understand** how visualizations convey information

What do people perceive / comprehend?

How do visualizations inform mental models?

## **2 Develop principles and techniques** for creating effective visualizations and supporting analysis

Leverage perception & augment cognition

Improve ties between visualization & mental model

# Exploratory Data Analysis

The screenshot shows the Crimespotting.org website interface. At the top, there are navigation buttons for zooming in (+), zooming out (-), and a compass. The main area is a map of Oakland, California, with various streets and landmarks labeled. Overlaid on the map are numerous colored circles, each containing a letter or code, representing different types of crime hotspots. A red circle is drawn around a specific area on the map, and a red arrow points from this area to a corresponding bar in a legend at the bottom. The legend consists of a series of colored bars, each with a letter or code and a checkmark. The text 'Crimespotting.org' is visible in the bottom left corner, and 'Virtual Earth' is visible in the bottom right corner.

# Maps

Dymaxion Maps [Fuller 46]

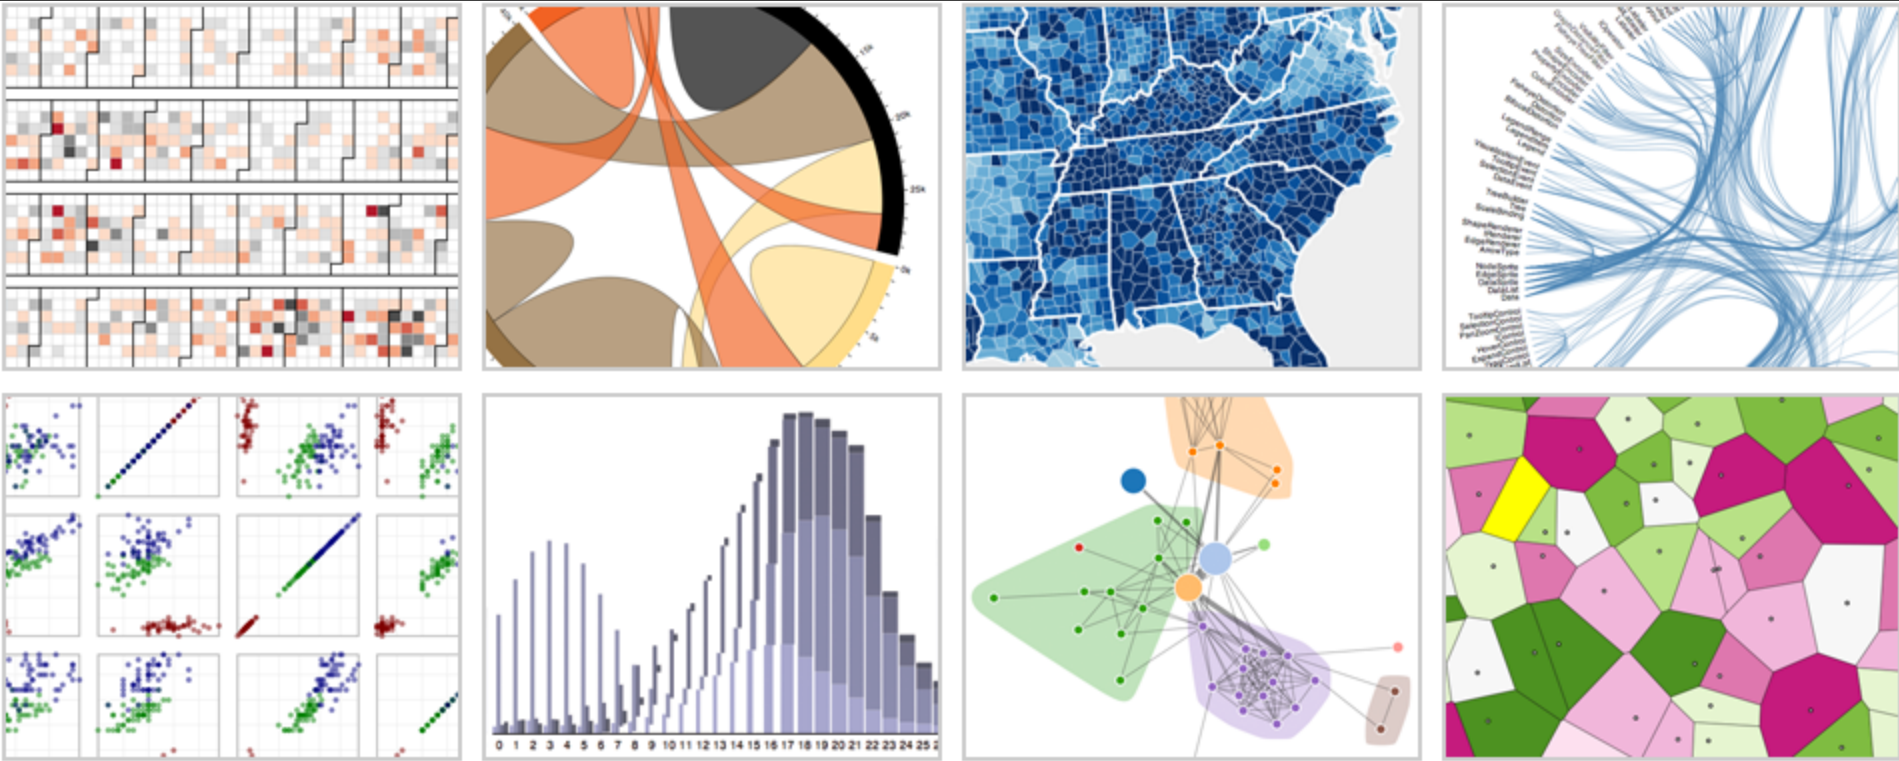

# Narrative

Recent elections have placed a heavy emphasis on “swing states” — Ohio, Florida and the other competitive states. Yet in the past, many more states shifted between the Democratic and Republican parties. A look at how the states stuck or shifted between elections and how they have shifted over past elections.

- Each box represents a state sized by number of electoral votes.
- Each curve shows how much it shifted left or right between elections

**Han Zhang**

*OH: Fri 3-4p, Location TBD*

# Sebastin Santy

PhD student, UW CSE  
DUB, UWNLP, RAVN

My research focuses on NLP & Culture (AI ← HCI)

Previously:  
Research @ AI2, MSR, CMU  
Open Source @ Mozilla, scikit-learn, Julia

Love travel, conversations: always up for a coffee!

Talk to me about: D3, Design, Language, Culture

@ Ravenna Park

@ West Montlake

@ Little Si

# Yilun Sheng (or Simon)

First-year CSE Ph.D. student

Research Interests: Computational Biology, ML,  
Distributed Computing Theory

Hobbies:

- Soccer (watching > playing), Premier League, Chelsea!
- Pokémon
- Bridge (the card game)

Contact: [ylsheng@cs.washington.edu](mailto:ylsheng@cs.washington.edu)

# Luke Snyder

snyderl@cs.washington.edu

OH: Mon 11 AM - 12 PM, Gates 152

## Research

- Visualization and HCI
- Dynamically Interactive Visualization for static SVG charts
- Mobile interactions for data exploration @ Adobe Research

## Technical Experience

- JavaScript / web programming, D3, Vega-Lite

## For Fun

- Sudoku, Stephen King (The Stand), running
- Jazz fusion, Japanese City Pop, Pat Metheny Group

# Han Zhang

[micohan@cs.washington.edu](mailto:micohan@cs.washington.edu), Gates 283  
PhD Student, UW CSE

## Research Focus

- Human behavior modeling (health and education)
- Interactive system for understanding and improving human behavior
- Fairness

## Things I Can Help With

- Python, Jupyter notebook, Statistical Data Graphics, Tableau, and Design

Love travel, desserts, and sunshine!

# Readings

From books, notebooks, and linked articles.

Material in class will loosely follow readings.

Readings should be read by start of class.

Post comments & quizzes on class forum.

One comment per week (except week 10).

Post comments by Friday 11:59pm.

You have 1 "pass" for the quarter.

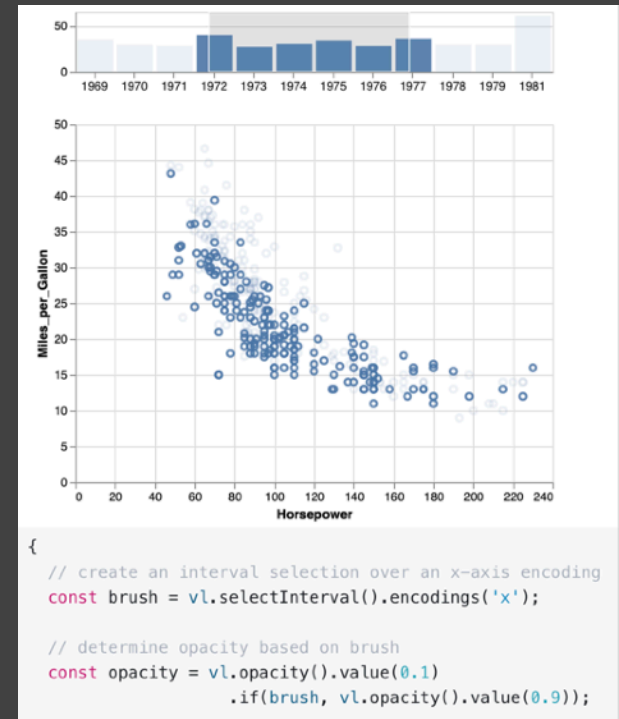

# "Textbooks"

See also: [www.edwardtufte.com](http://www.edwardtufte.com)

# Interactive Notebooks

Hands-on engagement with course concepts and visualization tools (Vega-Lite / Altair), in both JavaScript (Observable) *and* Python (Jupyter).

# Optional Book

*An Introduction to Designing With D3*

O'REILLY®

*Scott Murray*

## Interactive Data Visualization for the Web, 2nd Edition

*For learning D3!*

Book available online.

Code / examples on GitHub.

We will be using **D3 v7**.

<https://d3js.org>

# Assignments

**CP** Class Participation (10%)

**A1** Visualization Design (10%) - *Due 4/5*

**A2** Deceptive Visualization (15%) - *Due 4/19*

Peer Review - *Due 4/26*

**A3** Interactive Prototype (25%) - *Due 5/8*

Peer Review - *Due 5/16*

**FP** Final Project (40%)

Proposal - *Due 5/12*

Demonstration Video - *Due 6/1*

Final Deliverables - *Due 6/6*

# Grading Philosophy

We use a 10 point scale for assignment grading.

A score of 9.0 means you met the requirements, and maps to an "A" (~3.7 GPA). Scores above 9.0 reward work that goes above and beyond.

There is subjectivity in visualization design and assignments differ in many regards!

We provide high-level rubrics and also consider and partially rank the larger assignment pool.

# Final Project

**Visualization research project** on topic of choice

Initial **prototype** and **design reviews**

In-class demonstration **video** showcase

Submit and publish online (if feasible)

Projects from **previous classes** have been:

- Published as research papers
- Featured in the New York Times
- Released as successful open source projects

# Why outbreaks like coronavirus spread exponentially, and how to “flatten the curve”

Harry Stevens, Washington Post 2020

Locations of each train on the [red](#), [blue](#), and [orange](#) lines at 5:13 am. Hover over the diagram to the right to display trains at a different time.

Trains are on the right side of the track relative to the direction they are moving.

See the [morning rush-hour](#), [midday lull](#), [afternoon rush-hour](#), and the [evening lull](#).

Service starts at 5AM on Monday morning. Each line represents the path of one train. Time continues downward, so steeper lines indicate slower trains.

Since the red line splits, we show the Ashmont branch first then the Braintree branch. Trains on the Braintree branch "jump over" the Ashmont branch.

Train frequency increases around 6:30AM as morning rush hour begins.

# KEYBOARD WALKING

Passwords with a “keyboard walking” pattern start at an arbitrary key, then move in a direction (usually right or down) while continuing to hit keys. Sometimes this is combined with holding down the `SHIFT` key, so that some characters are uppercase or symbols to improve complexity.

While the generated password may seem to be random and unhackable, password crackers [check for these keyboard patterns](#) and guess them early on.

Many passwords in the leaked passwords dataset have a spatial pattern. Other than the numeric passwords like `123456`, common keyboard walking offenders include `qwerty` and `1qaz@wsx`.

**Questions?**

# A1: Visualization Design

**Design a static visualization for a data set.**

The climate of a place can have a tremendous impact on people's lived experience. You will examine average monthly climate measurements for six major U.S. cities, roughly covering the edges of the continental United States.

You must choose the message you want to convey. What question(s) do you want to answer? What insight do you want to communicate?

# A1: Visualization Design

Pick a **guiding question**, use it to title your vis.  
Design a **static visualization** for that question.  
You are free to **use any tools** (inc. pen & paper).

**Deliverables** (upload to Gradescope; see A1 page)

Image of your visualization (PNG or JPG format)

Short description + design rationale ( $\leq 4$  paragraphs)

Due by **11:59 pm, Wednesday April 5.**
