CSE 512 - Data Visualization Interaction

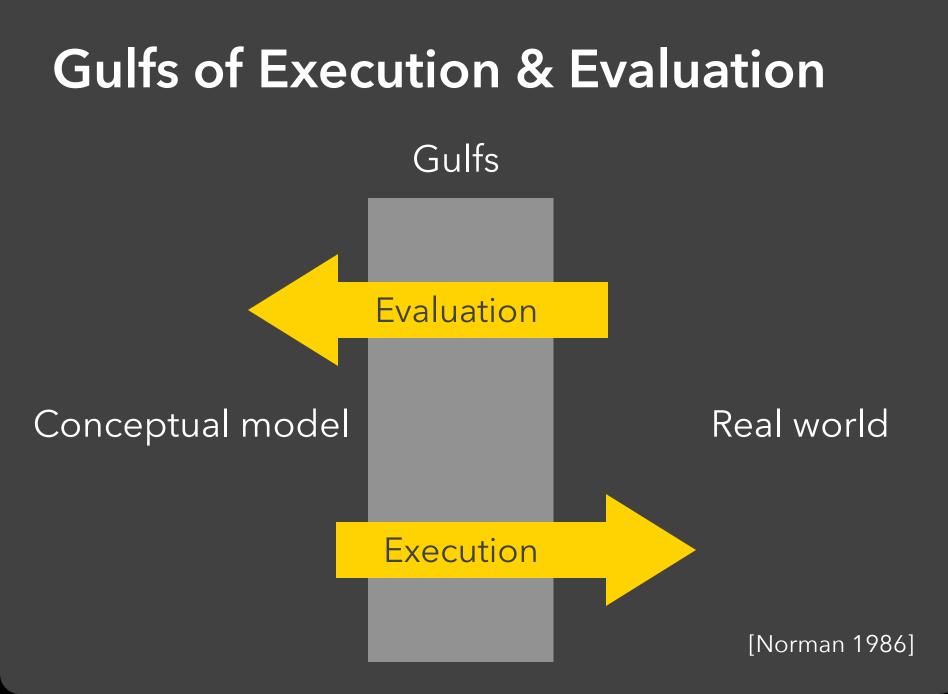

Jeffrey Heer University of Washington

[There is an] apparent challenge that computational artifacts pose to the longstanding distinction between the physical and the social, in the special sense of those things that one designs, builds, and uses, on the one hand, and those things with which one communicates, on the other.

"Interaction"- in a sense previously reserved for describing a uniquely interpersonal activity - seems appropriately to characterize what goes on between people and certain machines as well.

Lucy Suchman, Plans and Situated Actions

Interaction between people and machines requires *mutual intelligibility* or shared understanding.

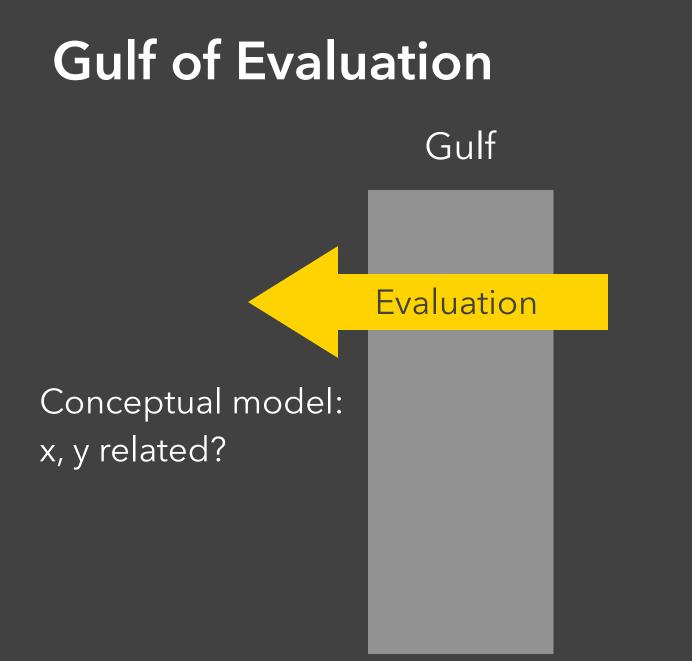

The difference between the user's intentions and the allowable actions.

The difference between the user's intentions and the allowable actions.

Gulf of Evaluation

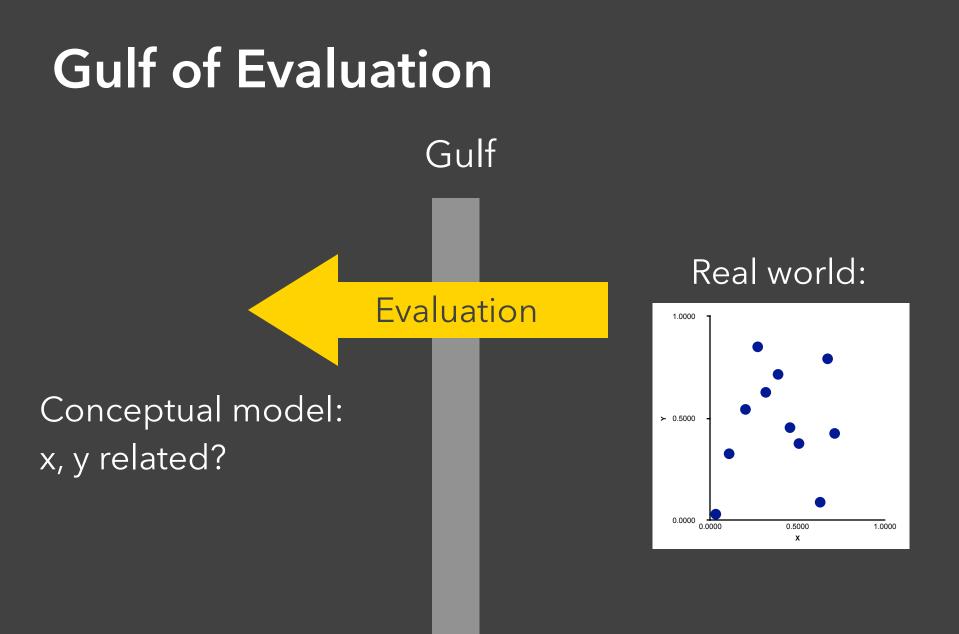

The amount of effort that the person must exert to interpret the state of the system and to determine how well the expectations and intentions have been met.

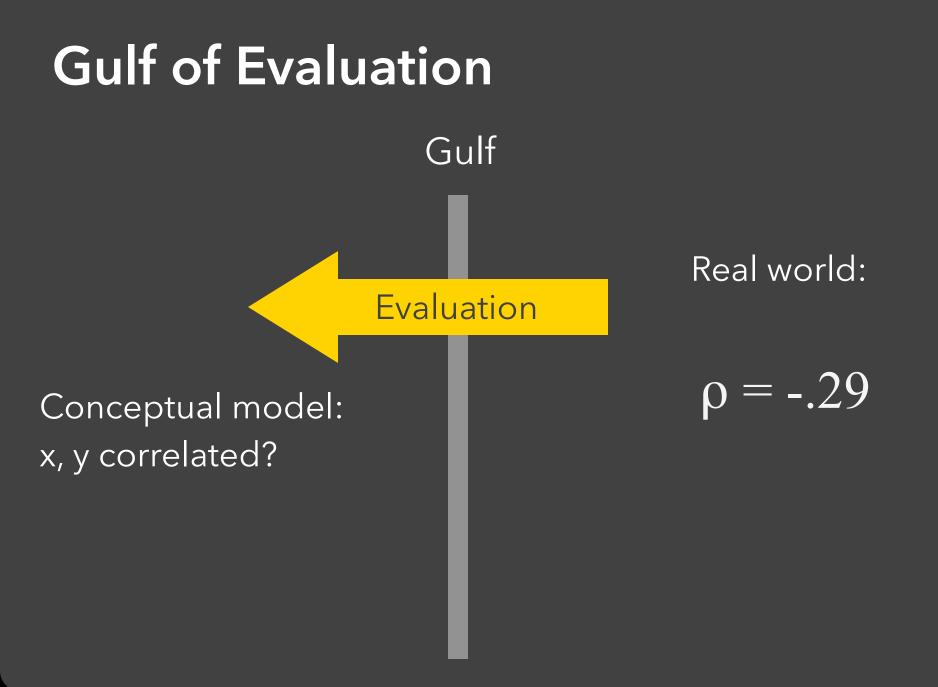

[Norman 1986]

Issues with Textual Queries

- 1. For programmers
- 2. Rigid syntax
- 3. Only shows exact matches
- 4. Too few or too many hits
- 5. No hint on how to reformulate the query
- 6. Slow question-answer loop
- 7. Results returned as table

Poll Time!

- Given housing data with:
- price
- address
- type (house/condo/...)
- bedroom count
- bathroom count

A2: Deceptive Visualization

Design **two** static visualizations for a dataset: 1. An earnest visualization that faithfully and ata 2. A deceptive visualization that + t0 ea Your two visualization dd αι Try to design a de the pears to be lve v Zâ and course staff? our mai earn Jwn dataset, but we have also You ree OO. reselected datasets for you. provi Images and a brief write-up on Gradescope. Submit Due by Mon 1/15 11:59pm.

A2 Peer Reviews

By Thursday 4/18 you will be assigned two peer A2 submissions to review. For each:

- Try to determine which is earnest and which is deceptive
- Share a rationale for how you made this determination
- Share feedback using the "I Like / I Wish / What If" rubric

Assigned reviews will be posted on the A2 Peer Review page on Canvas, along with a link to a Google Form. You should submit two forms: one for each A2 peer review.

Due by **Tue 4/23 11:59pm**.

I Like... / I Wish... / What If?

I LIKE...

Praise for design ideas and/or well-executed implementation details. *Example: "I like the navigation through time via the slider; the patterns observed as one moves forward are compelling!"*

I WISH...

Constructive statements on how the design might be improved or further refined. *Example: "I wish moving the slider caused the visualization to update immediately, rather than the current lag."*

WHAT IF?

Suggest alternative design directions, or even wacky half-baked ideas. Example: "What if we got rid of the slider and enabled direct manipulation navigation by dragging data points directly?"

A3: Interactive Prototype

Create an interactive visualization. Choose a driving question for a dataset and develop an appropriate visualization + interaction techniques, then deploy your visualization on the web. Due by *11:59pm* on **Monday, May 6**. <u>Work in project teams of 3-4 people</u>.

Form A3 + Final Project Team

Form a **team of 3-4** for A3 and the Final Project. Submit signup form by **Thu 4/25, 11:59pm**.

If you do not have team mates, post on Ed about your interests/skills/project ideas!

We will send out a reminder early next week.

Multi-view interactive graphics in ~10 lines of code

What constitutes a selection?

Input handlers: click, shift-click, drag, zoom, ... Bindings

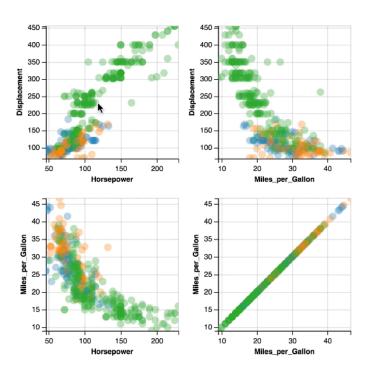

- Inputs: interactive brush, query widgets
- Axis scales: pan / zoom a scale domain
- Legends: interactive selection

Scale inversion: visual space → data space Predicate: test if a data record is selected

A selection can then *parameterize* data transformations and visual encodings.

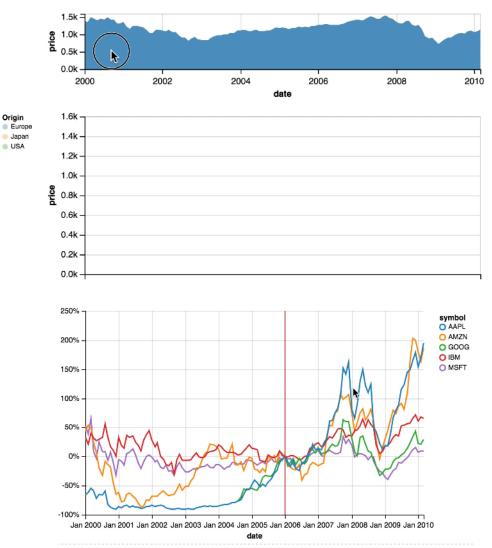

Selections

Selections *invert* scales and *parameterize* graphics

Bind selection to scale domains: Synchronized Pan & Zoom!
