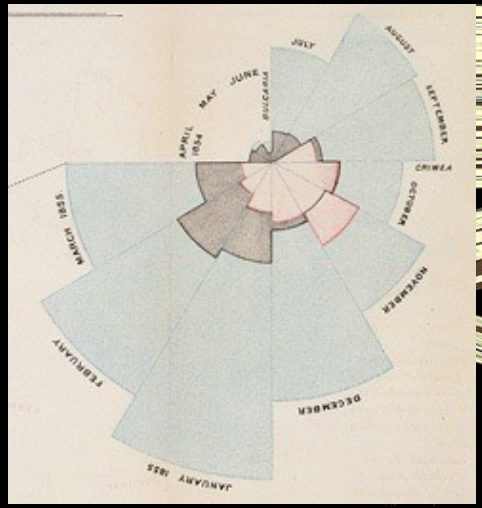
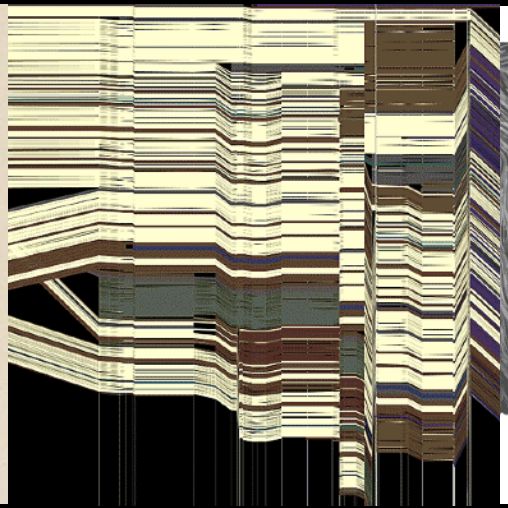
CSE 512 - Data Visualization

Interaction





Jeffrey Heer University of Washington

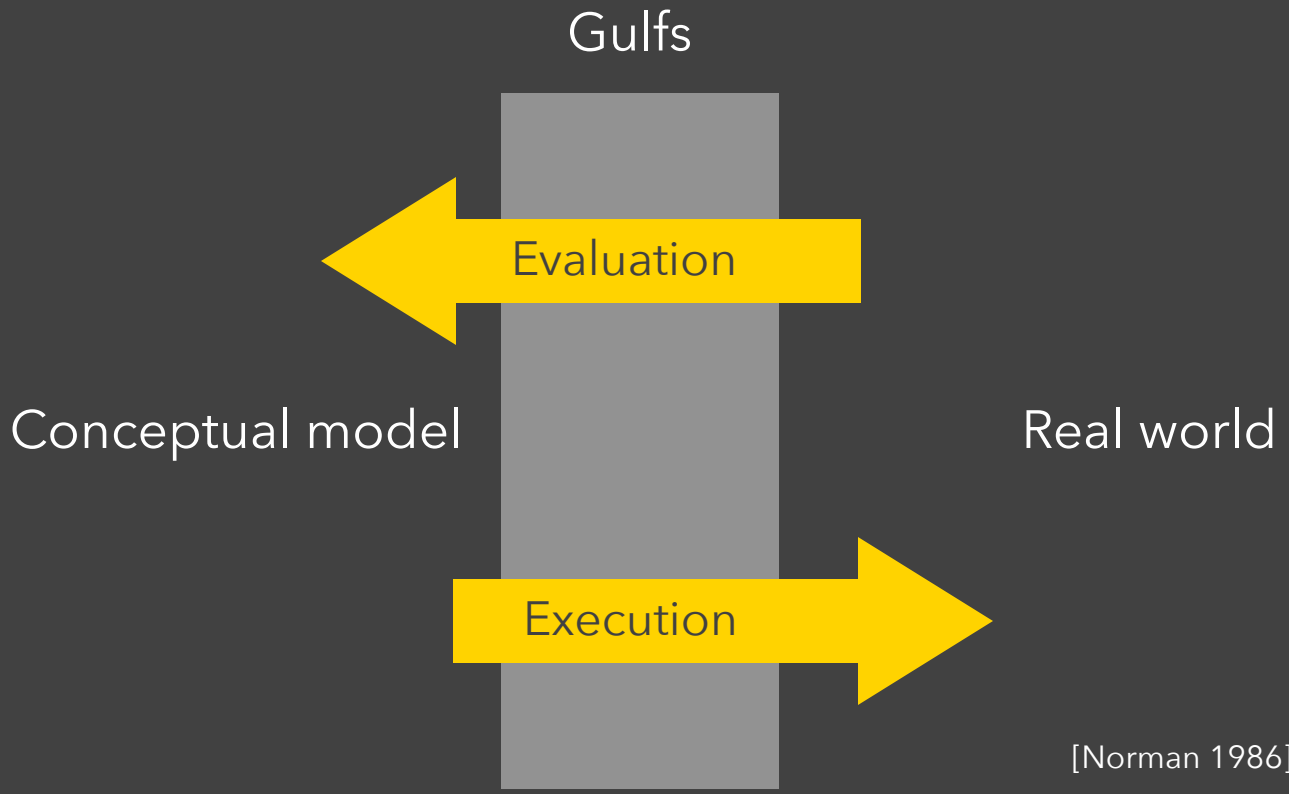
[There is an] apparent challenge that computational artifacts pose to the longstanding distinction between the physical and the social, in the special sense of those things that one designs, builds, and uses, on the one hand, and those things with which one communicates, on the other.

“Interaction”– in a sense previously reserved for describing a uniquely interpersonal activity – seems appropriately to characterize what goes on between people and certain machines as well.

Lucy Suchman, *Plans and Situated Actions*

Interaction between people and machines requires *mutual intelligibility* or *shared understanding*.

Gulfs of Execution & Evaluation



[Norman 1986]

Gulf of Execution

The difference between the user's intentions and the allowable actions.

[Norman 1986]

Gulf of Execution

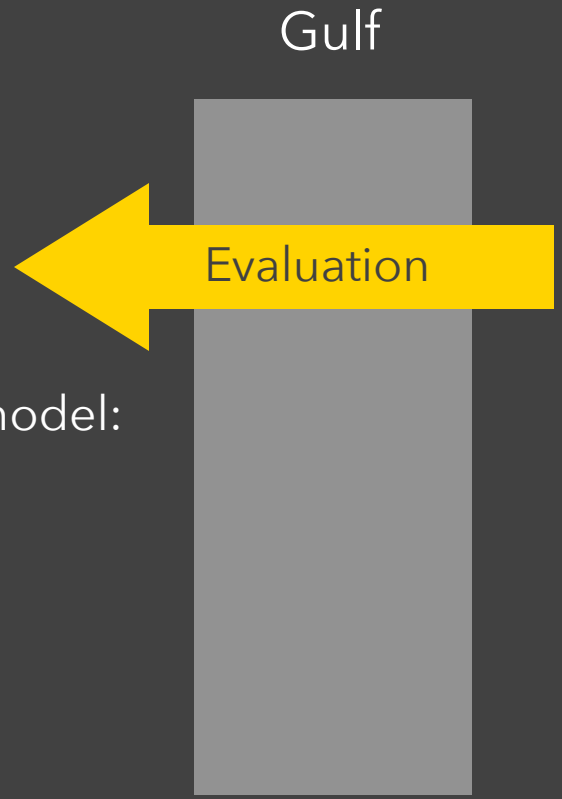
The difference between the user's intentions and the allowable actions.

Gulf of Evaluation

The amount of effort that the person must exert to interpret the state of the system and to determine how well the expectations and intentions have been met.

[Norman 1986]

Gulf of Evaluation



Conceptual model:
x, y related?

Real world:

X	Y
0.67	0.79
0.32	0.63
0.39	0.72
0.27	0.85
0.71	0.43
0.63	0.09
0.03	0.03
0.20	0.54
0.51	0.38
0.11	0.33
0.46	0.46

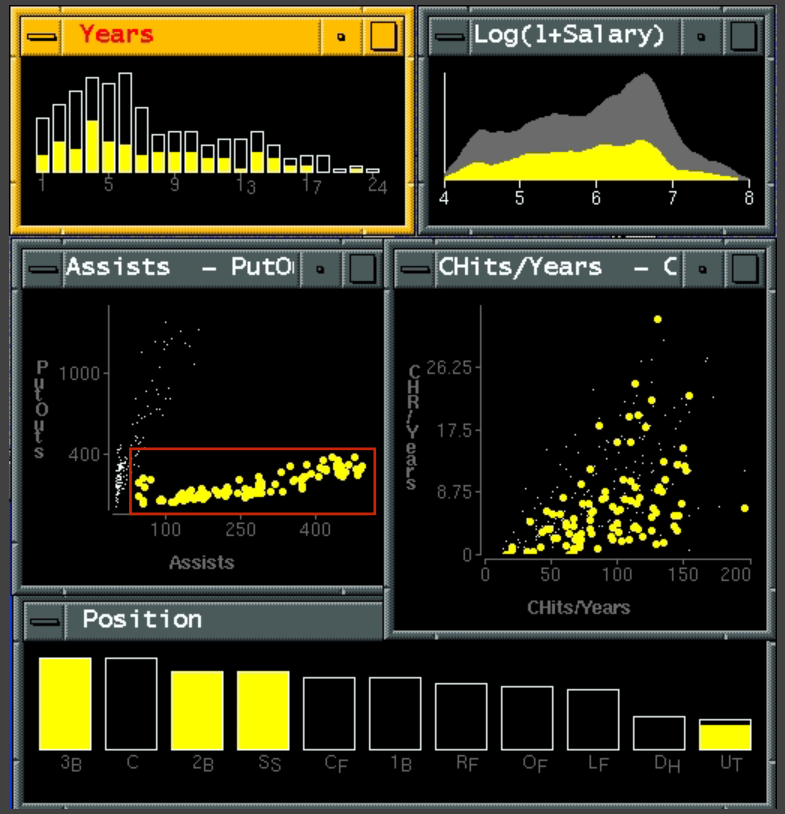
Linking Assists to Positions



Dynamic Queries

Query & Results

SELECT house FROM seattle_homes

WHERE price < 1,000,000 AND bedrooms > 2

ORDER BY price

Issues with Textual Queries

1. For programmers
2. Rigid syntax
3. Only shows exact matches
4. Too few or too many hits
5. No hint on how to reformulate the query
6. Slow question-answer loop
7. Results returned as table

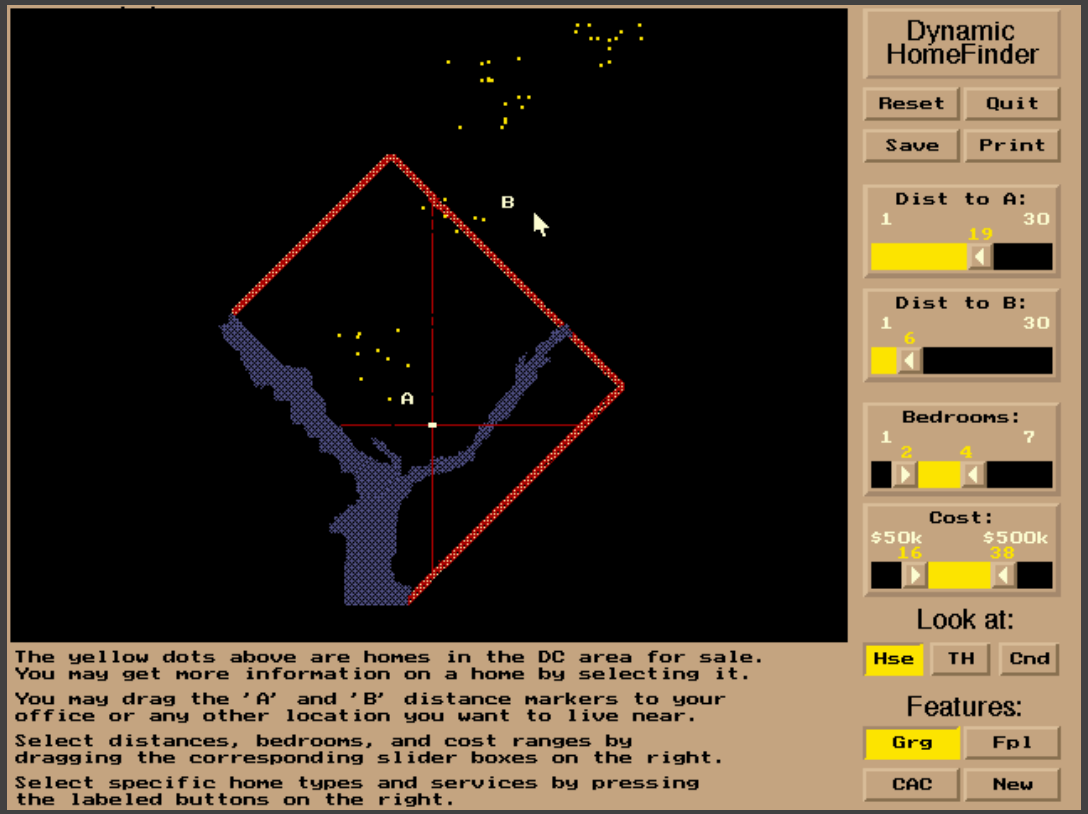
Design Time

Given housing data with:

- price
- address
- type (house/condo/…)
- bedroom count
- bathroom count

What forms of interaction might be useful for house hunters? Think about the *task* first, then how to support it.

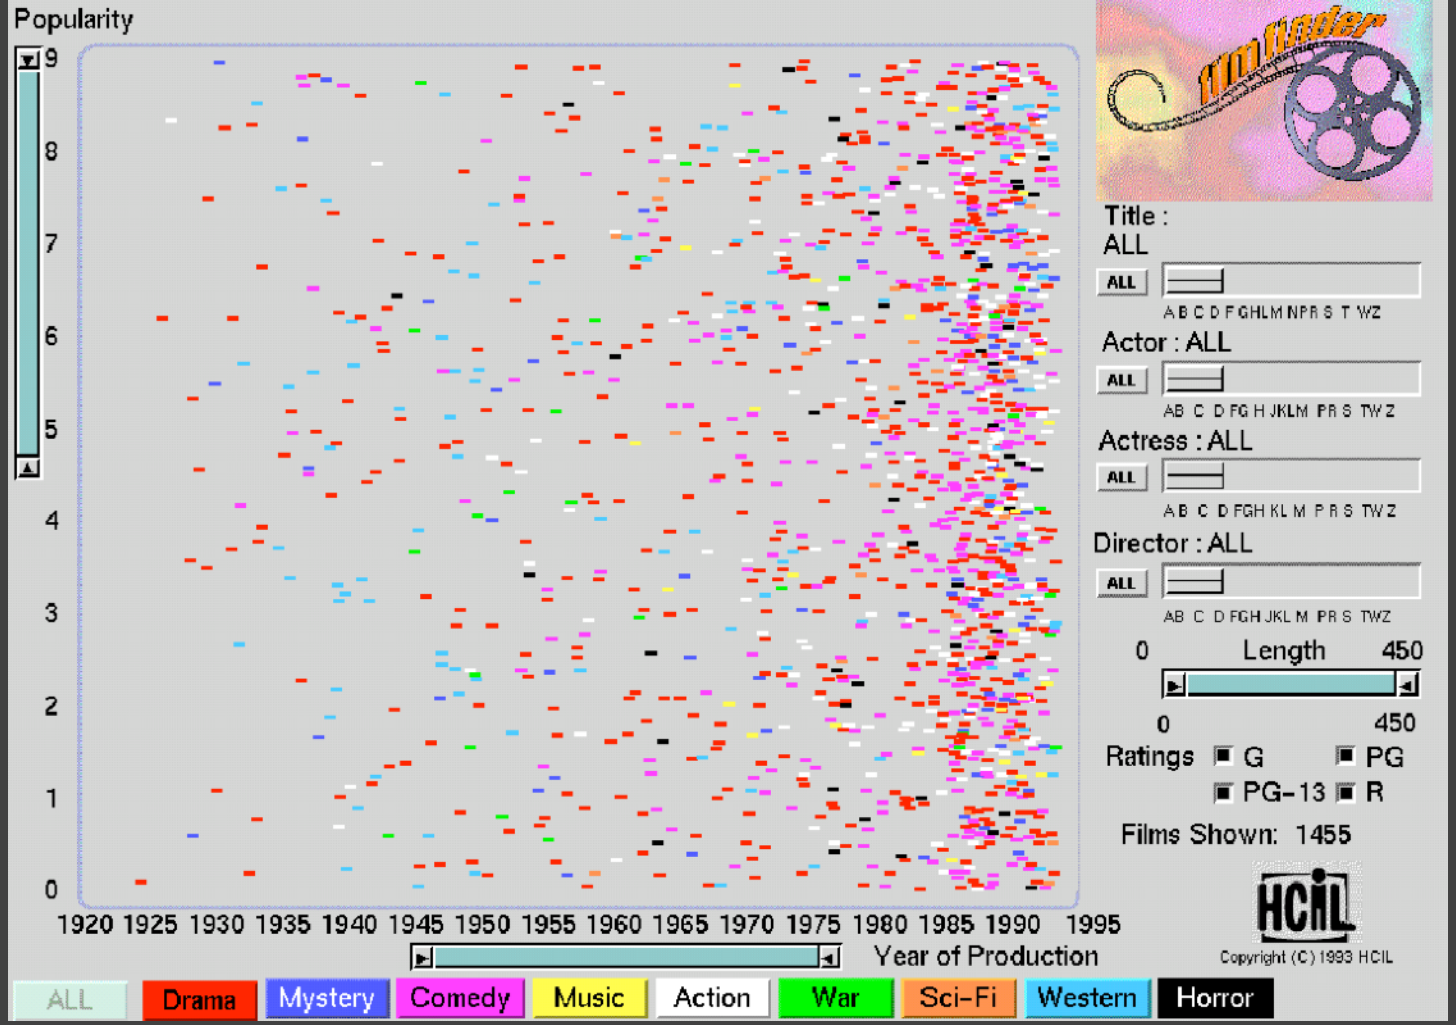
HomeFinder



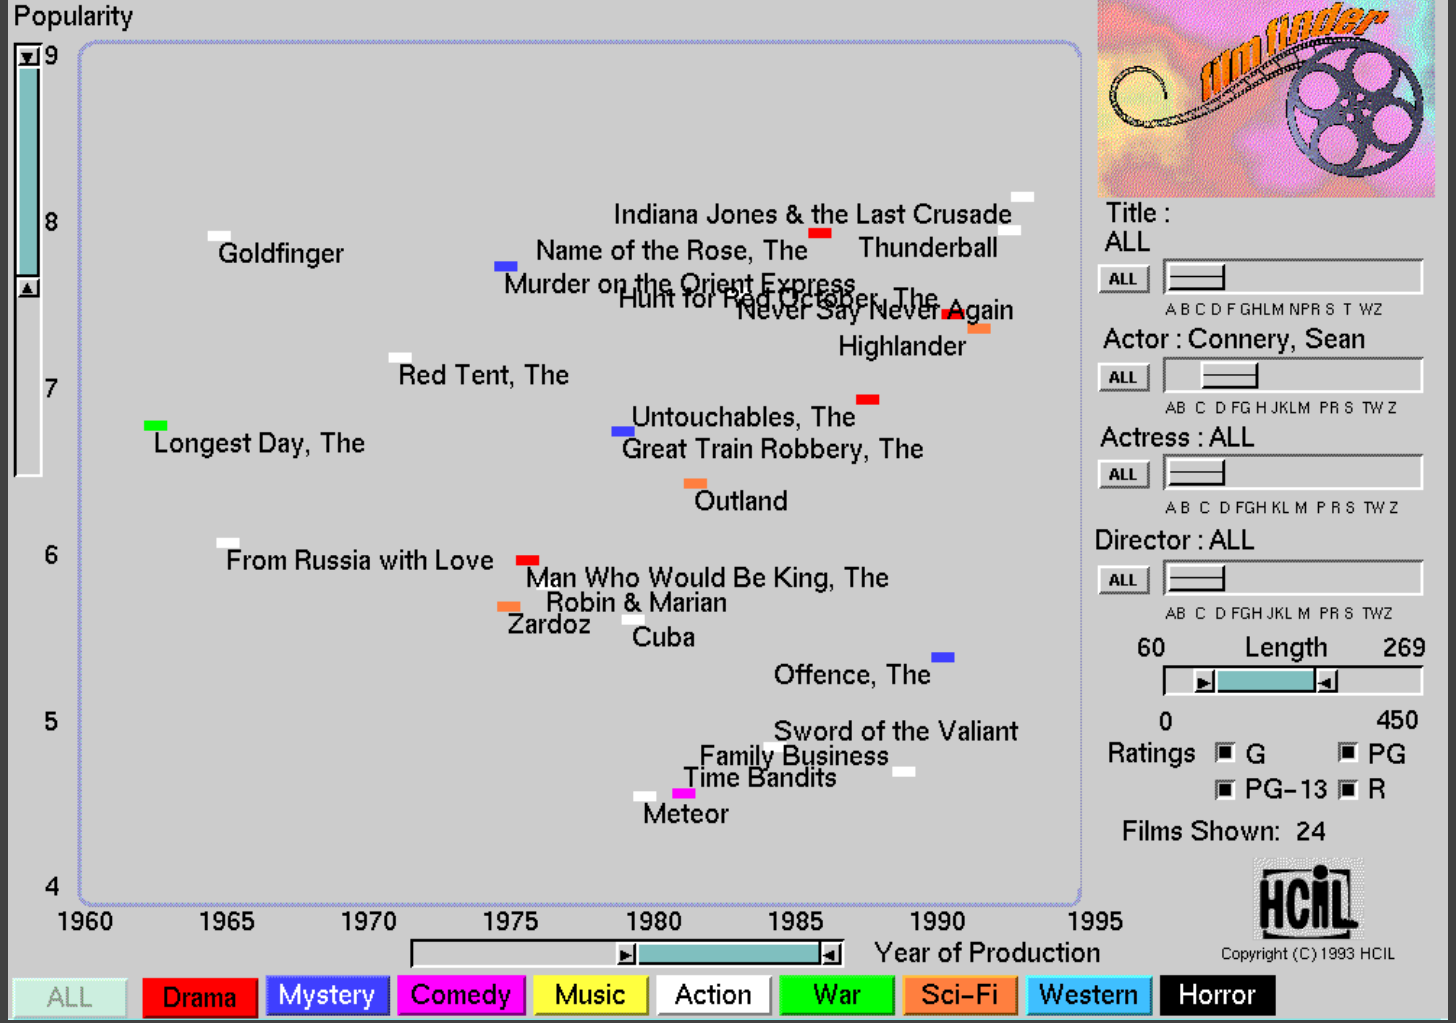
[Williamson and Shneiderman 92]

Direct Manipulation

1. Visual representation of objects and actions
2. Rapid, incremental and reversible actions
3. Selection by pointing (not typing)
4. Immediate and continuous display of results



[Ahlberg and Shneiderman 94]



[Ahlberg and Shneiderman 94]

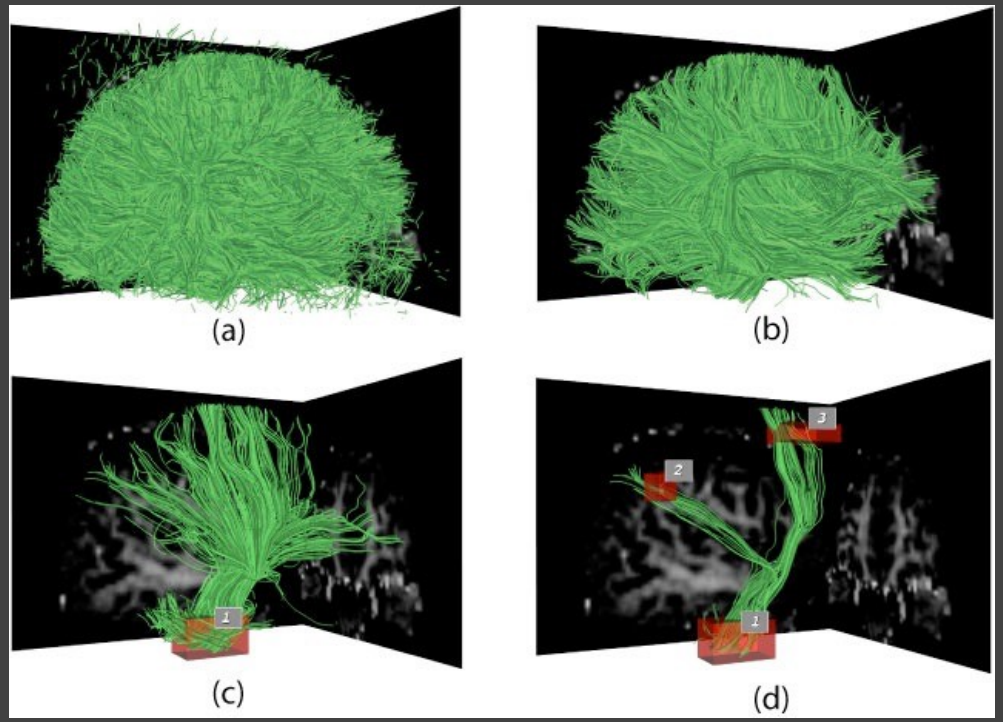
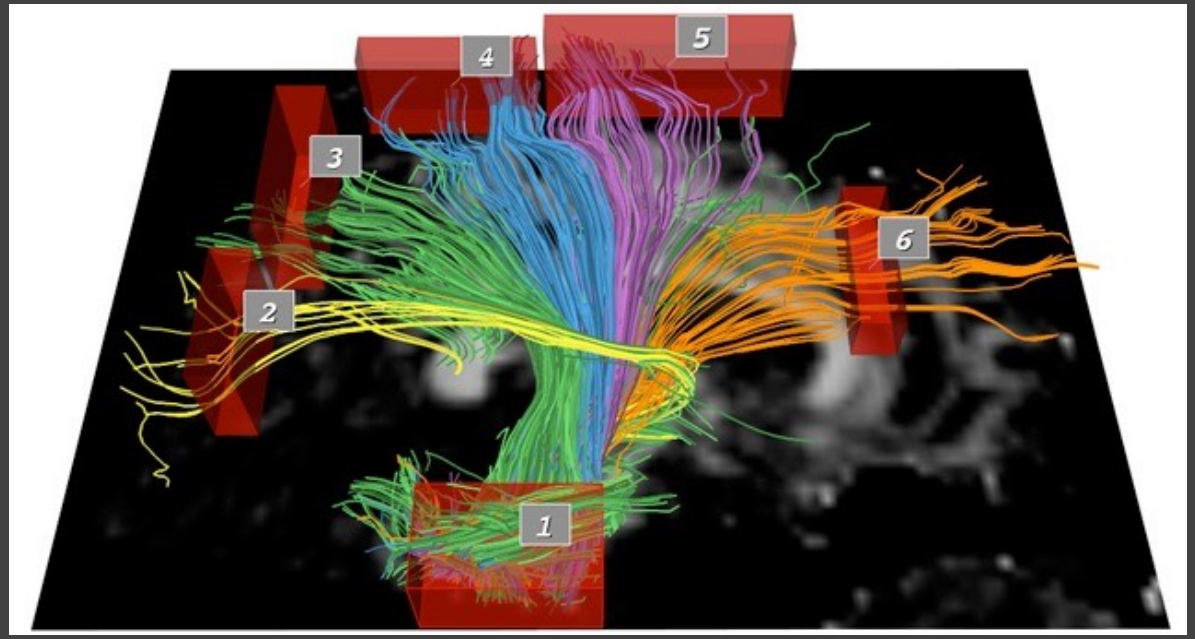
3D Dynamic Queries [Akers 04]



3D Dynamic Queries [Akers 04]



Pros & Cons

Pros

Controls useful for both novices and experts

Quick way to explore data

Pros & Cons

Pros

Controls useful for both novices and experts

Quick way to explore data

Cons

Simple queries

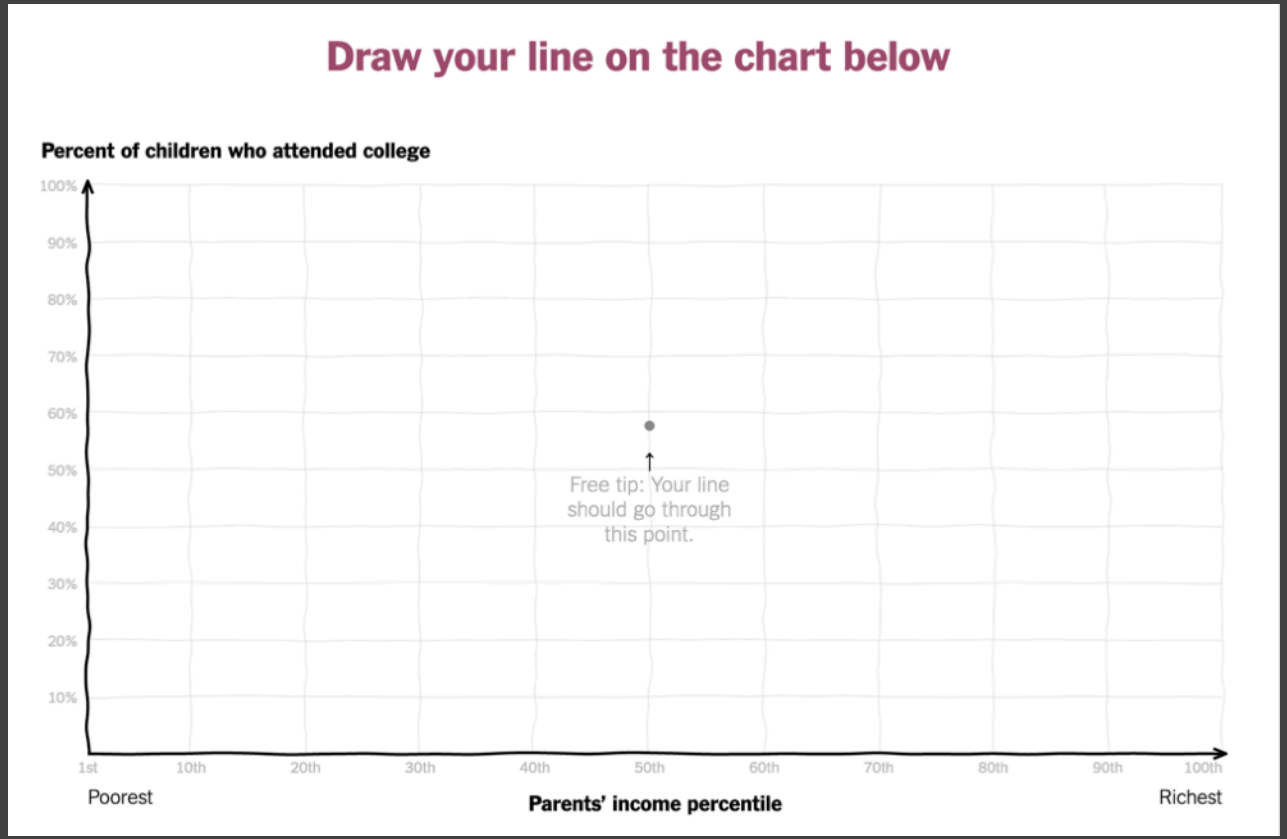
Lots of controls

Amount of data shown limited by screen space

Who would use these kinds of tools?

Prompting Reflection

You Draw It [Aisch et al. '15]



Interaction Summary

Most visualizations are interactive
Even passive media elicit interactions

Good visualizations are task dependent
Pick the right interaction technique
Consider the semantics of the data domain

Fundamental interaction techniques
Selection / Annotation, Sorting, Navigation,
Brushing & Linking, Dynamic Queries

Administrivia

A2: Deceptive Visualization

Design **two** static visualizations for a data

1. An *earnest* visualization that co the
2. A *deceptive* visu that ewe

Your two visu dre fer ions.

sign eptive zati t appears to be
n y k yo smates and course staff?

You are to c own dataset, but we have also
ovi me preselected datasets for you.

two images and a brief write-up on Gradescope.

Due by **Mon 4/21 EOD**.

DONE

A2: Peer Reviews

You will be assigned two peer W2 submissions to review. For each:

- Try to determine which is earnest and which is deceptive
- Share a rationale for how you made this determination
- Share feedback using the “I Like / I Wish / What If” rubric

Assigned reviews will be posted to a A2 Peer Review thread on Ed, along with a link to a Google Form. You should submit two forms: one for each A2 peer review.

Due by **Tue 4/29 EOD**.

I Like… / I Wish… / What If?

I LIKE…

Praise for design ideas and/or well-executed implementation details. *Example: "I like the navigation through time via the slider; the patterns observed as one moves forward are compelling!"*

I WISH…

Constructive statements on how the design might be improved or further refined. *Example: "I wish moving the slider caused the visualization to update immediately, rather than the current lag."*

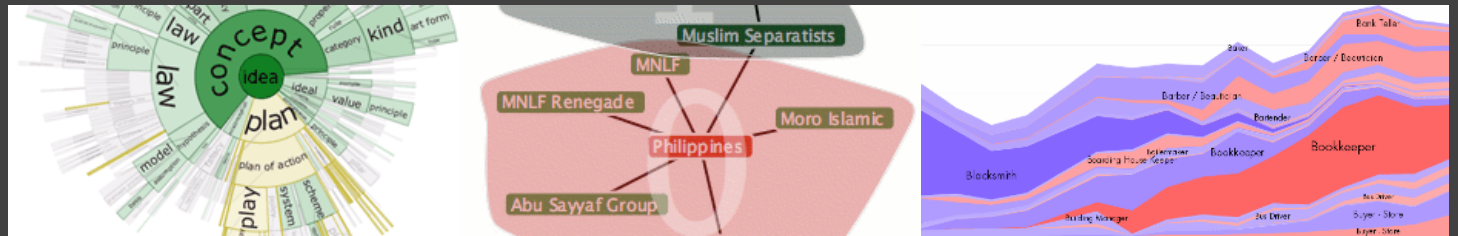
WHAT IF?

Suggest alternative design directions, or even wacky half-baked ideas. *Example: "What if we got rid of the slider and enabled direct manipulation navigation by dragging data points directly?"*

A3: Interactive Visualization

Create an interactive visualization in a team of 1-3 people. Choose a dataset and a driving question, develop a visualization + interaction techniques, then deploy your visualization on the web.

1. Form team, topic & data and start prototyping.
2. Complete implementation and submit to Gradescope by *EOD* on **Monday, May 12**.



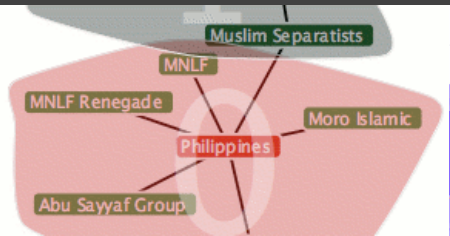
Form a Project Team

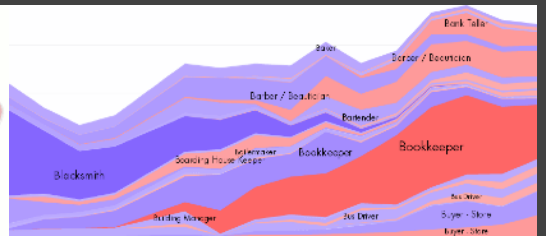
Form a **team of 1-3 people** for the A3 assignment.

Submit team composition using provided form.

If you're looking for team mates, you can post on Ed about your interests/skills/project ideas!

You may continue with the same team for the final project, or form a new team later. It's up to you.



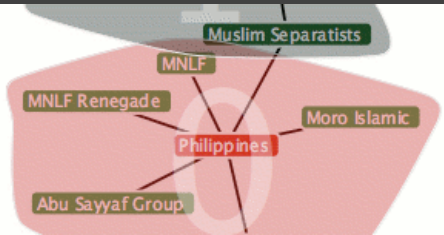


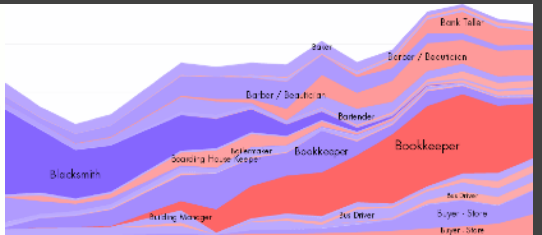
Requirements

Interactive. You must implement interaction methods! However, this is not only selection / filtering / tooltips. Also consider annotations or other narrative features to draw attention and provide additional context

Web-based. D3/Vega-Lite are encouraged, but not required. Deploy to web using GitLab pages.

Write-up. Provide design rationale.





Interactive Prototype Tips

Start now. It will take longer than you think.

Keep it simple. Choose a *minimal* set of interactions that enables users to explore and generate interesting insights. Do not feel obligated to convey *everything* about the data: focus on a compelling subset.

Promote engagement. How do your chosen interactions reveal interesting observations?

```

Multi-view interactive graphics in ~10 lines of code

What constitutes a selection?

Input handlers: click, shift-click, drag, zoom, …

Bindings

- **Inputs**: interactive brush, query widgets
- **Axis scales**: pan / zoom a scale domain
- **Legends**: interactive selection

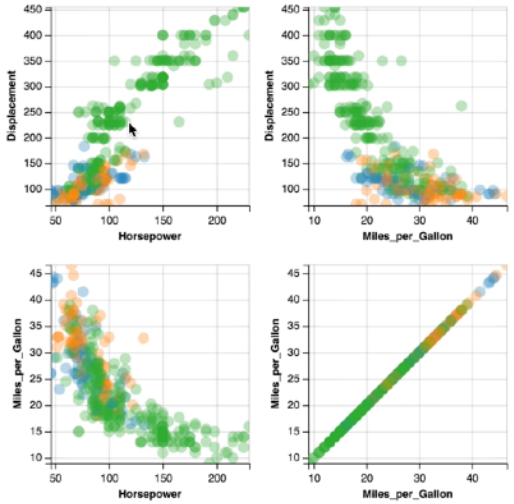
Scale inversion: visual space → data space

Predicate: test if a data record is selected

A selection can then *parameterize* data transformations and visual encodings.

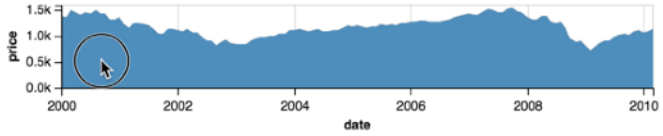
Selections

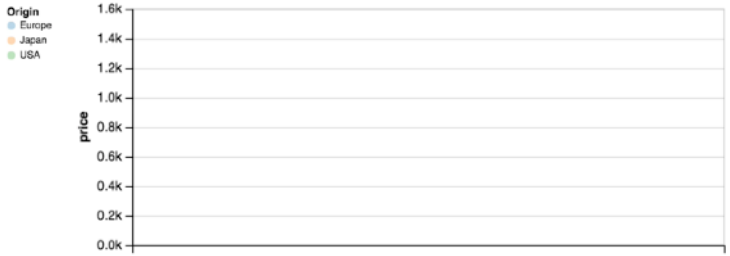
Selections *invert* scales and *parameterize* graphics

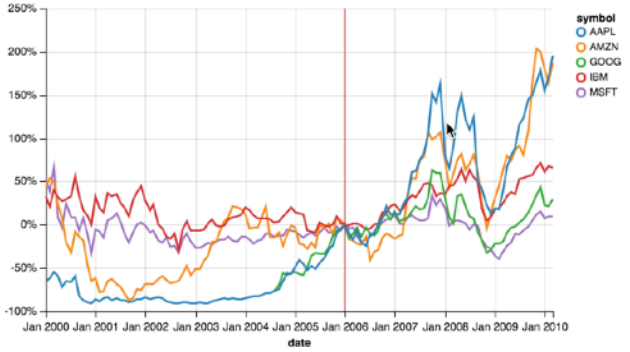


Bind selection to scale domains:
Synchronized Pan & Zoom!

Overview + Detail







Parameterized Transformations
