Homework 4: Homer, Marge, Bart, Lisa & Maggie

**Goal:** You will familiarize yourself with the Processing language by working out how to draw the Simpsons by programming. Besides getting experience with Processing, you will learn how to transfer a design to the screen, an idea we will use all term.

**Advertising**
Some of the most creative ideas come from advertising. Look at this Lego Ad, which won awards in 2012. Do you recognize these Lego constructions?

Although they are just five stacks of Lego blocks, the colors and sizes have been chosen to remind us of the Simpsons cartoon characters. The homework task is to display these five figures on the screen.

**Specifications**
The five stacks of blocks have specific sizes:

<table>
<thead>
<tr>
<th>Homer</th>
<th>Marge</th>
<th>Bart</th>
<th>Lisa</th>
<th>Maggie</th>
</tr>
</thead>
<tbody>
<tr>
<td>40 x 45</td>
<td>40 x 95</td>
<td>40 x 30</td>
<td>40 x 30</td>
<td>40 x 95</td>
</tr>
<tr>
<td>40 x 50</td>
<td>40 x 35</td>
<td>40 x 30</td>
<td>40 x 30</td>
<td>40 x 25</td>
</tr>
<tr>
<td>40 x 45</td>
<td>40 x 95</td>
<td>40 x 30</td>
<td>40 x 55</td>
<td>40 x 40</td>
</tr>
</tbody>
</table>

**Tip:** When we give sizes of objects on the screen, we always give them “width first”

For example, Marge’s blue hair is a rectangle that is 40 pixels wide and 95 pixels high.
**Tip:** Colors are given by three numbers called RGB for ‘red,’ ‘green,’ and ‘blue.’ Each number is between 0-255. It tells the amounts of the 3 colored lights to mix for that color.

The fill colors for the blocks are only an approximation. It is possible to adjust these colors so they more closely match the ad. Begin with the colors given, but then adjust as you wish.

<table>
<thead>
<tr>
<th>Color Palette</th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Face Yellow:</td>
<td>250, 193, 35</td>
<td></td>
</tr>
<tr>
<td>Homer White:</td>
<td>245, 245, 245</td>
<td></td>
</tr>
<tr>
<td>Pants Blue:</td>
<td>89, 79, 217</td>
<td></td>
</tr>
<tr>
<td>Marge Blue:</td>
<td>41, 82, 240</td>
<td></td>
</tr>
<tr>
<td>Bart Shirt:</td>
<td>240, 71, 41</td>
<td></td>
</tr>
<tr>
<td>Lisa Dress:</td>
<td>229, 77, 35</td>
<td></td>
</tr>
</tbody>
</table>

A good background color is: 255, 245, 220, and a good canvas size is: 900 x 800.

**Start The Simpsons Program**

Open a Processing Window for a program of the five Simpsons characters.
To start, you must
- 1) define the size of your canvas using the `size( )` function
- 2) define the color of the canvas background using the `background( )` function
- 3) tell Processing you don’t want lines around your boxes using the `noStroke( )` function

Use these commands like they are used in the class examples, but if you forget how they were used, you can get their specifications on the Help > Reference page.

**Drawing a Character**

To draw one of the Simpsons, write a comment in your program saying which one it is. Comments begin with `//` and run to the end of the line, as in `// Bart`

**Tip:** Positions on the screen are numbered (or addressed) from (0, 0) in the upper left corner and increase to the right and down. So, on a 900 x 800 canvas the middle position in the top row is (450,0). This is NOT LIKE GEOMETRY, where (0,0) is in the middle.

The blocks are rectangles, drawn using the function `rect(x, y, w, h)` where x, y gives the screen position of the rectangle’s upper left corner, and w, h gives its width and height. So, to draw Marge’s blue hair we might use the command

```plaintext
rect(360, 340, 40, 95);  //Draw Marge’s Hair
```

which would draw a 40 x 95 rectangle with it’s upper left corner 360 pixels in from the left and 340 pixels down from the top. **You must figure out** the positioning of all blocks.

**Tip:** It is smart to check your work often. So, after typing a command, run the program.
The color is set with the `fill(r, g, b)` function, where r, g and b are the three color values. Once set, all rectangles, circles, etc. are filled with that color until a new fill( ) command changes it to a new color. So, to set the color of Marge’s hair, the command

```
fill(41,82,240); //Set Marge’s Hair Color
```

must be given before the rectangle is drawn.

**The Result**

Your program should have a comment on each non-blank line, and the instructions for drawing each of the five Simpsons should be grouped together. The resulting screen display is shown at right.

**Challenge**

The Simpsons picture is pretty good, but it is incomplete. Where is Maggie’s pacifier?

Using the Processing reference page (Help > Reference), read about the function used to draw circles (hint, check ellipses). Then improve your program to help Maggie out by drawing her pacifier. Your result will look like this.

**Wrap Up**

You’ve programmed Processing for the first time! You’ve learned that the pixels of the screen are counted with a coordinate system that starts with 0,0 in the upper left corner of the window, and you’ve learned a few handy Processing functions, which were new today, but you will use them throughout the term.

Rename a copy of the `.pde` file with your name, and submit it into the class drop box.
