

CSE 121 – Lesson 3

Miya Natsuhara

Spring 2023

Music: [121 23sp Lecture Vibes](#) 

[sli.do #cse121](https://sli.do/#cse121)

TAs:

<i>Jasmine</i>	<i>Atharva</i>	<i>Mia</i>	<i>Justin</i>
<i>Shananda</i>	<i>Julia</i>	<i>Archit</i>	<i>Aishah</i>
<i>Vidhi</i>	<i>Anju</i>	<i>Grace</i>	<i>Claire</i>
<i>Larry</i>	<i>Lydia</i>	<i>Kailye</i>	<i>Lydia</i>
<i>Jacqueline</i>	<i>Jonus</i>	<i>Joshua</i>	<i>Kai</i>
<i>Afifah</i>	<i>Hugh</i>	<i>James</i>	

Announcements, Reminders

- C0 was due last night
- P0 was released on Wednesday and is due Tuesday, April 11
 - This will be our typical schedule for assignments!
- Quiz 0 scheduled for April 20 (about 2 weeks away)
 - More details about quizzes will be released in the coming week

(PCM) Variables

- Now that we know about different types and data, we can learn about how to store it!
- Java allows you to create variables within a program. A variable has
 - A type
 - A name
 - (Potentially) a value it is storing

Declaration: `int x;`
Initialization: `x = 30;`

Or all in one line:

```
int x = 30;
```

(PCM) Variables

They're made to be manipulated, modified,

```
int myFavoriteNumber = 7;  
int doubleFV = myFavoriteNumber * 2;  
myFavoriteNumber = myFavoriteNumber + 3;
```

Notice – this doesn't really make any mathematical sense! That's because, in Java, = is *assignment*, not equality!

New Operators!

```
myFavoriteNumber = myFavoriteNumber + 3;
```

This type of pattern is so common, we have an even *shorter* way we can write it!

```
myFavoriteNumber += 3;
```

You can do the same for `-=`, `*=`, `/=`, and `%=`

And there are even shorter versions for *incrementing* and *decrementing*! `myFavoriteNumber++`; `myFavoriteNumber--`;

Poll in with your answer!

What do a, b, and c hold after this code is executed?

a ~~10~~ 35
b ~~30~~ 15
c ~~40~~ 30

```
int a = 10;  
int b = 30;  
int c = a + b;  
c -= 10;  
a = b + 5;  
b /= 2;
```

A. 10, 30, 40

B. 35, 15, 30

C. 35, 15.5, 30

D. 20, 15, 30

(PCM) Strings and chars

- String = sequence of characters treated as one, yet can be indexed to get individual parts
- Zero-based indexing 
- **Side note:** new data type!
char, represents a single character,
so we use single quotes
Strings are made up of chars!

(PCM) String Methods

Usage: `<string variable>.<method>(…)`

Method	Description
<code>length()</code>	Returns the length of the string.
<code>charAt(i)</code>	Returns the character at index <i>i</i> of the string
<code>indexOf(s)</code>	Returns the index of the first occurrence of <i>s</i> in the string; returns -1 if <i>s</i> doesn't appear in the string
<code>substring(i, j)</code> or <code>substring(i)</code>	Returns the characters in this string from <i>i</i> (inclusive) to <i>j</i> (exclusive); if <i>j</i> is omitted, goes until the end of the string
<code>contains(s)</code>	Returns whether or not the string contains <i>s</i>
<code>equals(s)</code>	Returns whether or not the string is equal to <i>s</i> (case-sensitive)
<code>equalsIgnoreCase(s)</code>	Returns whether or not the string is equal to <i>s</i> ignoring case
<code>toUpperCase()</code>	Returns an uppercase version of the string
<code>toLowerCase()</code>	Returns a lowercase version of the string

Poll in with your answer!

Suppose `s` contains the String "bubble gum". Which option below would result in `s` containing "Gumball" instead?

b	u	b	b	l	e		g	u	m
0	1	2	3	4	5	6	7	8	9

A. `s.substring(7) + "ball";`

B. `s = s.substring(7, 9) + "ball";`

C. `s = s.charAt(7).toUpperCase() + "ball";`

D. `s = s.substring(7, 8).toUpperCase() + s.substring(8) + "ball";`

E. `s = s.substring(7, 8).toUpperCase() + s.substring(7, 10) + "ball";`
