CSE 121

Nested loops, Random, Math

Questions during Class?

Raise hand or send here

sli.do **#cse121**

BEFORE WE START

*Talk to your neighbors:**What's your favorite dessert?*Music: ♣ [CSE 121 25su Lecture Tunes](#) ♣**Instructor:** Hannah Swoffer

TAs:	Abby	Merav
	Hannah	Trey
	Julia	

Agenda

- **Announcements, Reminders** ←
- Follow-up on Wednesday...
- Nested for Loop Practice
- Random, Math Practice
- Code Example!

Announcements, Reminders

- C1 is out, due Tuesday July 15th
- Resubmission Cycle 1 (R1) released, due Tuesday July 15th
 - Eligible for resubmission: C0 & P0
- Observation: the course picks up pace a bit in this next week!
 - Go to section!
- Support reminders:
 - Hannah's OHs: Mon 11:30am – 1:00pm, Wed 1:30pm – 2:30pm
 - IPL: Mon through Friday (various times—see the “Getting Help” tab on the website for more details)
 - Async via Ed & email!

Announcements, Reminders

- **Quiz 0** is on **Thursday, July 17th** (in your registered quiz section)
 - can't make it? email Hannah ASAP
- Quiz 0 Practice Quizzes have been released
 - More details in my Ed post
 - I *strongly* recommend looking at these before Quiz 0

Agenda

- Announcements, Reminders
- **Follow-up on Wednesday...** ←
- Nested for Loop Practice
- Random, Math Practice
- Code Example!

Wed PCM Review: for loops!

For loops are our first **control structure**: a syntax *structure* that *controls* the execution of other statements.

```
for ( initialization ; test ; update ) {  
    body (statements to be repeated)  
}
```

Wed PCM Review: String Traversals

```
// For some String s  
for (int i = 0; i < s.length(); i++) {  
    // do something with s.charAt(i)  
}
```

Go Huskies?

h-u-s-k-i-e-s

The Fencepost Pattern

Some task where one piece is repeated n times, and another piece is repeated $n-1$ times and they alternate

h-u-s-k-i-e-s

Agenda

- Announcements, Reminders
- Follow-up on Wednesday...
- **Nested for Loop Practice** ←
- Random, Math Practice
- Code Example!

PCM: Nested for loops

```
for (int outerLoop = 1; outerLoop <= 5; outerLoop++) {  
    System.out.println("outer loop iteration #" + outerLoop);  
    for (int innerLoop = 1; innerLoop <= 3; innerLoop++) {  
        System.out.println("    inner loop iteration #" + innerLoop);  
    }  
    System.out.println(outerLoop);  
}
```

PCM: Nested for loops, “outer loop”

```
for (int outerLoop = 1; outerLoop <= 5; outerLoop++) {  
    System.out.println("outer loop iteration #" + outerLoop);  
    for (int innerLoop = 1; innerLoop <= 3; innerLoop++) {  
        System.out.println("    inner loop iteration #" + innerLoop);  
    }  
    System.out.println(outerLoop);  
}
```

PCM: Nested for loops, “inner loop”

```
for (int outerLoop = 1; outerLoop <= 5; outerLoop++) {  
    System.out.println("outer loop iteration #" + outerLoop);  
    for (int innerLoop = 1; innerLoop <= 3; innerLoop++) {  
        System.out.println("    inner loop iteration #" + innerLoop);  
    }  
    System.out.println(outerLoop);  
}
```

Practice: Think

[sli.do](#)[#cse121](#)

What output is produced by the following code?

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; j++) {  
        System.out.print(i);  
    }  
    System.out.println();  
}
```

Practice: Think

sli.do

#cse121

What code produces the following output?

A.

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; j++) {  
        System.out.print(i);  
    }  
    System.out.println();  
}
```

B.

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; j++) {  
        System.out.print(j);  
    }  
    System.out.println();  
}
```

**C.**

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; i <= j; j++) {  
        System.out.print(j);  
    }  
    System.out.println();  
}
```

D.

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; i++) {  
        System.out.print(j);  
    }  
    System.out.println();  
}
```

```
1  
12  
123  
1234  
12345
```

Practice: Pair

sli.do

#cse121

What code produces the following output?

A.

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; j++) {  
        System.out.print(i);  
    }  
    System.out.println();  
}
```

B.

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; j++) {  
        System.out.print(j);  
    }  
    System.out.println();  
}
```

**C.**

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; i <= j; j++) {  
        System.out.print(j);  
    }  
    System.out.println();  
}
```

D.

```
for (int i = 1; i <= 5; i++) {  
    for (int j = 1; j <= i; i++) {  
        System.out.print(j);  
    }  
    System.out.println();  
}
```

```
1  
12  
123  
1234  
12345
```

Scope

Scope: the part of a program where a variable exists (and can thus be referenced, modified, or used).

- General rule: from its **declaration to the next closing brace, }**
- a variable declared in a for loop only exists in that loop!
- exception: a loop variable's scope ends at that loop's closing brace

```
for (int outerLoop = 1; outerLoop <= 5; outerLoop++) {  
    System.out.println("outer loop iteration #" + outerLoop);  
    for (int innerLoop = 1; innerLoop <= 3; innerLoop++) {  
        System.out.println("    inner loop iteration #" + innerLoop);  
    }  
    System.out.println(outerLoop);  
}
```

innerloop's
scope

outerloop's
scope

Agenda

- Nested for Loop Practice
- **Random, Math Practice** ←
- Code Example!

Pseudo-randomness

Having a computer generate truly random numbers is hard!

Computers generate numbers that “look random” in a predictable way, using mathematical formulas

- can use “external” variables like time, mouse position, etc.
- if we “fix” these variables, we can reproduce the same behavior – very important for testing!

PCM Review: Random

`Random` `rand` = `new Random();`
type name Random creation code

A Random **object** generates pseudo-random numbers.

- the Random **class** is found in the `java.util` **package**; to use, need `import java.util.*;`
- we can “seed” the generator to make it behave deterministically

Method	Description
<code>nextInt()</code>	Returns a random integer
<code>nextInt(<i>max</i>)</code>	Returns a random integer in the range <code>[0, <i>max</i>)</code> , or in other words, 0 to <i>max</i> -1 inclusive
<code>nextDouble()</code>	Returns a random double in the range <code>[0.0, 1.0)</code>

Practice: Think

[sli.do](#)[#cse121](#)

Assuming you've declared: `Random randy = new Random();`

Which of these best models picking a random card? (1-13 inclusive)

A. `randy.nextInt()`

B. `randy.nextInt(13)`

C. `randy.nextInt(13) + 1`

D. `randy.nextInt(14)`

Practice: Pair

sli.do

#cse121

Assuming you've declared: `Random randy = new Random();`

Which of these best models picking a random card? (1-13 inclusive)

A. `randy.nextInt()`

B. `randy.nextInt(13)`

C. `randy.nextInt(13) + 1`

D. `randy.nextInt(14)`

PCM Review: Math

Calling:

Math.<method>(...)

Method	Description
<code>Math.abs(<i>value</i>)</code>	Returns the absolute value of <i>value</i>
<code>Math.ceil(<i>value</i>)</code>	Returns <i>value</i> rounded up
<code>Math.floor(<i>value</i>)</code>	Returns <i>value</i> rounded down
<code>Math.max(<i>value1</i>, <i>value2</i>)</code>	Returns the larger of the two values
<code>Math.min(<i>value1</i>, <i>value2</i>)</code>	Returns the smaller of the two values
<code>Math.round(<i>value</i>)</code>	Returns <i>value</i> rounded to the nearest whole number* note: need to cast result to int (it's complicated!)
<code>Math.sqrt(<i>value</i>)</code>	Returns the square root of <i>value</i>
<code>Math.pow(<i>base</i>, <i>exp</i>)</code>	Returns <i>base</i> raised to the <i>exp</i> power
