CSE 121

Methods, Parameters, Scope Day 2

Questions during Class?

Raise hand or send here

sli.do **#cse121**

BEFORE WE START

Talk to your neighbors:*What are your weekend plans?*Music: ♣ [CSE 121 25su Lecture Tunes](#) ♣**Instructor:** Hannah Swoffer**TAs:**
Abby Merav
Hannah Trey
Julia

Agenda

- **Announcements, Reminders** ←
- Revisiting Methods, Parameters, and Class Constants
- Code Example(s)!

Announcements, Reminders

- P1 is out, due next Tuesday, July 22nd
 - Start early – this one is tough!
- R2 released, due next Tuesday, July 22nd
- Quiz 0 was yesterday!
 - Grades will be out before Quiz 1
 - Please come to my office hours if you would like your cheat sheet back

Agenda

- Announcements, Reminders
- **Revisiting Methods, Parameters, and Class Constants** ←
- Code Example(s)!

Last Time: Methods

Writing our own **methods** allows us to define our own commands!

(naming conventions for methods are same as variables: camelCased)

```
public static void myMethod() {  
    /**  
    Your code here  
    **/  
}
```

Last Time: Parameters

Definition: a value passed to a method by its caller. “Like” a variable!

```
public static void myMethod(String musicalAct) {  
    System.out.print(musicalAct + " is the best!");  
    ...  
}
```

Calling a method with a parameter...

```
myMethod("Laufey"); // prints: Laufey is the best!
```

Last Time: Class Constants

A fixed value visible (in-scope) to the whole program (the entire *class*).

Value is set at declaration, **cannot** be reassigned – value is *constant*.

```
public static final type NAME_OF_CONSTANT = expression;
```

Practice: Think

sli.do

#cse121

```
public static final int COUNT = 7;

public static void main(String[] args) {
    int count = 5;
    line(count);
    System.out.println("COUNT is: " + COUNT);
    System.out.println("count is: " + count);
}

public static void line(int count) {
    for (int i = 1; i <= count; i++) {
        System.out.print("*");
    }
    count++;
    System.out.println();
}
```

What will be the **last line of output** from this code?

A. count is: 1

B. count is: 5

C. count is: 6

D. count is: 7

Practice: Pair

sli.do

#cse121

```
public static final int COUNT = 7;

public static void main(String[] args) {
    int count = 5;
    line(count);
    System.out.println("COUNT is: " + COUNT);
    System.out.println("count is: " + count);
}

public static void line(int count) {
    for (int i = 1; i <= count; i++) {
        System.out.print("*");
    }
    count++;
    System.out.println();
}
```

What will be the **last line of output** from this code?

A. count is: 1

B. count is: 5

C. count is: 6

D. count is: 7

Walkthrough: Counting Counts

```
public static final int COUNT = 7;
public static void main(String[] args) {
    int count = 5;
    line(count);
    System.out.println("COUNT is: " + COUNT);
    System.out.println("count is: " + count);
}
```

```
public static void line(int count) {
    for (int i = 1; i <= count; i++) {
        System.out.print("*");
    }
    count++;
    System.out.println();
}
```
