- Scanners with Strings
 - Hybrid Approach & Files
- Using PrintStream for File Output
- Example

Announcements

- Programming Assignment 0 (P0) out later today!
 - Due next Thursday, October 9th!
 - Focused on File I/O
- Creative Project 0 (C0) was due last night. How'd it go?
 - Expect grades back about a week after the assignment was due
 - Joined class late? Use Resubmission Cycle 0 to submit it!

- Announcements/Reminders
- Refresh Last Time

- Scanners with Strings
 - Hybrid Approach & Files
- Using PrintStream for File Output
- Example

(Last Time) Scanner/File for input

Scanner is defined in the java.util package

import java.util.*;

File is defined in the java.io package

import java.io.*;

```
Scanner console = new Scanner(System.in);
File newFile = new File("example.txt");
Scanner fileScan = new Scanner(newFile);
```

Scanner Methods	Description
nextInt()	Reads the next token from the user as an int and returns it
nextDouble()	Reads the next token from the user as a double and returns it
next()	Reads the next token from the user as a String and returns it
nextLine()	Reads an entire line from the user as a String and returns it
hasNextInt()	Returns true if the next token can be read as an int, false otherwise
hasNextDouble()	Returns true if the next token can be read as a double, false otherwise
hasNext()	Returns true if there is another token of input to be read in, false otherwise
hasNextLine()	Returns true if there is another line of input to be read in, false otherwise

(PCM) Typical Line-Processing Pattern

```
while (scan.hasNextLine()) {
    String nextLine = scan.nextLine();
    // do something with nextLine
}
```

(PCM) Typical Token-Processing Pattern

- Announcements/Reminders
- Refresh Last Time
- Scanners with Strings

- Hybrid Approach & Files
- Using PrintStream for File Output
- Example

```
String str = "A quick, brown fox";

Scanner stringScan = new Scanner(str);
while (stringScan.hasNext()) {
    String nextToken = stringScan.next();
    System.out.println(nextToken);
}
```

```
String str = "A quick, brown fox";
Scanner stringScan = new Scanner(str);
while (stringScan.hasNext()) {
    String nextToken = stringScan.next();
    System.out.println(nextToken);
```

```
String str = "A quick, brown fox";
Scanner stringScan = new Scanner(str);
while (stringScan.hasNext()) {
    String nextToken = stringScan.next();
    System.out.println(nextToken);
```

```
String str = "A quick, brown fox";
Scanner stringScan = new Scanner(str);
while (stringScan.hasNext()) {
    String nextToken = stringScan.next();
    System.out.println(nextToken);
```

quick,

```
String str = "A quick, brown fox";
Scanner stringScan = new Scanner(str);
while (stringScan.hasNext()) {
    String nextToken = stringScan.next();
    System.out.println(nextToken);
```

brown

```
String str = "A quick, brown fox";
Scanner stringScan = new Scanner(str);
while (stringScan.hasNext()) {
    String nextToken = stringScan.next();
    System.out.println(nextToken);
```

fox

- Announcements/Reminders
- Refresh Last Time
- Scanners with Strings
 - Hybrid Approach & Files

- Using PrintStream for File Output
- Example

(PCM) Typical Hybrid Pattern

```
File newFile = new File("in.txt");
Scanner fileScan = new Scanner(newFile);
while (fileScan.hasNextLine()) {
    String line = fileScan.nextLine();
    Scanner lineScan = new Scanner(line);
    while (lineScan.hasNext ()) {
           nextToken = lineScan.next__();
        // do something with nextToken
```

Line-by-line and **then** token-by-token to do something

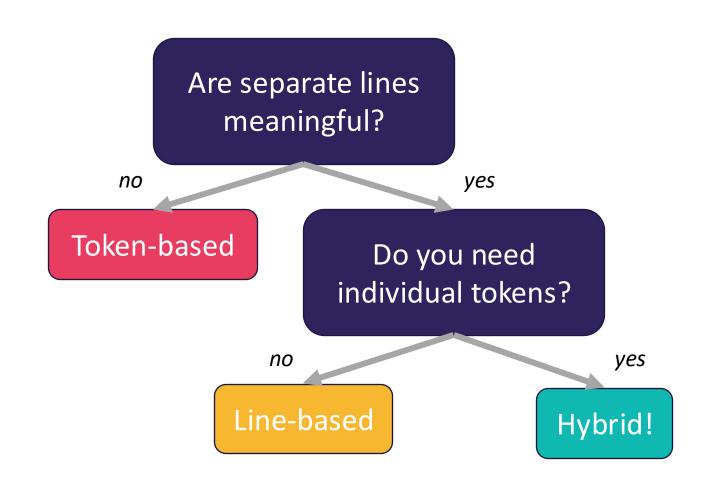

(PCM) Typical Hybrid Pattern

```
File newFile = new File("in.txt");
Scanner fileScan = new Scanner(newFile);
while (fileScan.hasNextLine()) {
    String line = fileScan.nextLine();
    Scanner lineScan = new Scanner(line);
    while (lineScan.hasNext ()) {
           nextToken = lineScan.next ();
        // do something with nextToken
```

Let's look at the example from last time...

(PCM) Token vs. Line vs. Hybrid?

- We now know 3 different ways to use Files!
 - Line
 - Token
 - Hybrid
- Although this gives us flexibility – it can sometimes get confusing
- Feel free to use the following diagram to help!

(PCM) Scanning Numeric Data

On Wednesday, we primarily used String-based Scanner methods to read input from a file. Let's work with some numeric data now!

We're going to make more use of

- hasNextInt()
- hasNextDouble()
- nextInt()
- nextDouble()
- Assumptions about our file's format!

No element next or not the correct type?
Expect a NoSuchElementException or an InputMismatchException

Practice: Think

sli.do #cse122

What would be the result of executing the following code?

```
Scanner fileScan = new Scanner(new File("data.txt"));
while (fileScan.hasNextLine()) {
   String line = fileScan.nextLine();
   Scanner lineScan = new Scanner(line);
   double min = lineScan.nextDouble();
   double max = min;
   while (lineScan.hasNextDouble()) {
        double nextNum = lineScan.nextDouble();
       min = Math.min(min, nextNum);
       max = Math.max(max, nextNum);
    System.out.println("Max: " + max + ", Min: " + min);
                   data.txt 2.3 9.2
                                          0.73
                                -1.5000
```

```
A) Max: 9.2, Min: 2.3
Max: 17.0, Min: 0.73
Max: -1.5, Min: -1.5
```

```
B) Max: 9.2, Min: -1.5
```

```
C) Max: 9.2, Min: 2.3 Max: 17, Min: 0.73 Max: 0.0, Min: -1.5
```

D) Error

sli.do #cse122

What would be the result of executing the following code?

```
Scanner fileScan = new Scanner(new File("data.txt"));
while (fileScan.hasNextLine()) {
   String line = fileScan.nextLine();
   Scanner lineScan = new Scanner(line);
   double min = lineScan.nextDouble();
   double max = min;
   while (lineScan.hasNextDouble()) {
        double nextNum = lineScan.nextDouble();
       min = Math.min(min, nextNum);
       max = Math.max(max, nextNum);
    System.out.println("Max: " + max + ", Min: " + min);
                   data.txt 2.3 9.2
                                          0.73
                                -1.5000
```

A) Max: 9.2, Min: 2.3 Max: 17.0, Min: 0.73 Max: -1.5, Min: -1.5

B) Max: 9.2, Min: -1.5

C) Max: 9.2, Min: 2.3 Max: 17, Min: 0.73 Max: 0.0, Min: -1.5

D) Error

- Scanners with Strings
 - Hybrid Approach & Files
- Using PrintStream for File Output
- Example

(PCM) PrintStreams for output

```
PrintStream is defined in the java.io package import java.io.*;
```

```
File outputFile = new File("out.txt");
PrintStream output = new PrintStream(outputFile);
```

PrintStream Methods	Description
print()	Prints the given value to the set output location.
println()	Prints the given value to the set output location, and then terminates the line.

```
System.out.print("Hello, world! ");
System.out.println("#1 Bee Movie fan!");
output.println("#1 Bee Movie fan!");
```

Hello, world! #1 Bee Movie fan!

Movie Ratings

In this program, we'll be examining and altering data from a file of IMDB ratings for popular U.S. movies. This will happen through 3 major user-entered commands:

(F)ind movie, (A)dd a rating, and (S)ave.

small.tsv

```
Title
     Average Total
Pride_&_Prejudice
                 7.8 323647
Barbie 6.9 455488
Oppenheimer 8.4
                    588723
Poor_Things 8.5
                    20542
Spider-Man:_Across_the_Spider-Verse 8.6
```

Movie Ratings

```
Welcome to the CSE 122 Movie Rating Program!
Loaded 5 movies from small.tsv!
Menu: (F)ind movie, (A)dd rating, (S)ave, (Q)uit
Enter your choice: F
What's the name of the movie? Pride & Prejudice
Movie Pride & Prejudice found!
   Average Rating: 7.8
   Total Ratings: 323647
Menu: (F)ind movie, (A)dd rating, (S)ave, (Q)uit
Enter your choice: A
What movie would you like to add your rating to? Pride & Prejudice
And what rating would you like to give? 100000
Menu: (F)ind movie, (A)dd rating, (S)ave, (Q)uit
Enter your choice: f
What's the name of the movie? Pride & Prejudice
Movie Pride & Prejudice found!
   Average Rating: 8.1
   Total Ratings: 323648
Menu: (F)ind movie, (A)dd rating, (S)ave, (Q)uit
Enter your choice: S
What's the name of the file you'd like to save to? out.txt
Menu: (F)ind movie, (A)dd rating, (S)ave, (Q)uit
Enter your choice: q
Thank you for using this program! Bye!
```

small.tsv

```
Title Average Total
Pride_&_Prejudice 7.8 323647
Barbie 6.9 455488
Oppenheimer 8.4 588723
Poor_Things 8.5 20542
Spider-Man: Across the Spider-Verse 8.6 329200
```

```
[Pride_&_..., Barbie, Oppenheimer, Poor_Things, Spider-Man...]
[7.8, 6.9, 8.4, 8.5, 8.6]
[323647, 455488, 588723, 20542, 329200]
```

Movie Ratings: Development Strategy

- 1. Fill in the main method with a loop that calls a method to read the data in from the .tsv file and allows the user to select between the different options (find, add, save, quit) I was nice and did this for you ©
- 2. Implement a method to **load** the movie rating data from the file and populate the appropriate arrays
- 3. Implement a method that allows users to **find** the rating for a movie
- 4. Implement a method that allows users to add a rating for a movie
- 5. Implement a method that allows users to **save** the movie ratings information to a file
