Announcements/Reminders

- Review Java
- Functional Decomposition
- Code Quality
- First Assignment
 - Grading

Announcements

- Hope you had fun in your first quiz section yesterday!
- Creative Project 0 (C0) released later today, due next Thursday, Jan 16th
 - Focused on Java Review + Functional Decomposition
- Java Review Session on Monday, January 13th
 - Session 1: 11:30am 12:20pm **ECE 125**
 - Session 2: 3:30pm 4:20pm **CSE2 G20**
 - Will be recorded!
- IPL will also open on Monday, January 13th!
- Elba Office Hours posted
 - Tuesdays 3pm 4pm CSE 438
 - Wednesdays 3:30pm 4:30pm CSE 438
 - Viewable on the <u>Staff page of the course website</u>

Reminders

- Fill out the <u>Introductory Survey</u>
- 🖈 Complete the pre-class material (PCM) for Wednesday (see calendar)
 - Will be posted after class today
- Attend quiz section on Tuesday!

Section Credit

- Students receive "section credit" for a quiz section by attending <u>and</u> engaging in the quiz section's class and activities.
- Section credit is logged and tracked by TAs on behalf of students.
- Students can track and verify their participation credits on Gradescope.
- Single step necessary to begin section credit tracking:
 - Go to Gradescope
 - **Submit** the "Section Participation" assignment, by filling out Q1 with your name stating that you understand the conditions.
 - Done!

Section Credit

- Students can earn **one extra resubmission** at the end of the quarter by participating in 11+ sections throughout 25Wi!
- Missing a quiz section will <u>not</u> count against you, but attending section can help you earn that extra resubmission to use at the end of the quarter.

- Announcements/Reminders
- Review Java
- Functional Decomposition
- Code Quality
- First Assignment
 - Grading

Reminders: Review Java Syntax

Java Tutorial reviews all the relevant programming features you should familiar with (even if you don't know them in Java).

- Printing and comments
- Variables, types, expressions
- Conditionals (if/else if/else)
- Loops (for and while)
- Strings
- Methods
- Arrays
- 2D arrays

Practice: Think

sli.do #cse122

In-Class Activities

- Goal: Get you actively participating in your learning
- Typical Activity
 - Question is posed
 - Think (1 min): Think about the question on your own
 - Pair (2 min): Talk with your neighbor to discuss question
 - If you arrive at different conclusions, discuss your logic and figure out why you differ!
 - If you arrived at the same conclusion, discuss why the other answers might be wrong!
 - Share (1 min): We discuss the conclusions as a class
- During each of the Think and Pair stages, you will respond to the question via a sli.do poll
 - Not worth any points, just here to help you learn! 😉

Practice: Think

sli.do #cse122

What is the output of this Java program?

```
public class Demo {
   public static void main(String[] args) {
      int[] nums = {1, 4, 4, 8, 13};

      int totalDiff = 0;
      for (int i = 1; i <= nums.length; i++) {
            totalDiff += (nums[i] - nums[i - 1]);
      }
      System.out.println("Total Diff = " + totalDiff);
   }
}</pre>
```

- A) Total Diff = 12
- **B)** Total Diff = 10
- C) Total Diff = 9
- **D)** Exception!

Practice : Pair

sli.do #cse122

What is the output of this Java program?

```
public class Demo {
   public static void main(String[] args) {
      int[] nums = {1, 4, 4, 8, 13};

      int totalDiff = 0;
      for (int i = 1; i <= nums.length; i++) {
            totalDiff += (nums[i] - nums[i - 1]);
      }
      System.out.println("Total Diff = " + totalDiff);
   }
}</pre>
```

- A) Total Diff = 12
- **B)** Total Diff = 10
- C) Total Diff = 9
- **D)** Exception!

Case Study: Minesweeper Description

Minesweeper is a classic puzzle game that involves a grid of squares, some of which contain hidden mines. The objective of the game is to uncover all the squares that do not contain mines, without detonating any of the mines.

In the board that the player is working from, each square contains either:

- A mine
- A number indicating how many mines are adjacent to the square
- Is blank (indicating there are 0 mines adjacent to the square)

The player clicks on a square to reveal what is hidden underneath. If the square contains a mine, the game is over and the player loses. If not, the player uses the information in that square to determine how to proceed.

Using logic and deduction, the player must determine the locations of the mines and mark them with flags. Once all the mines have been flagged, the game is won. The game comes with different levels of difficulty which may determine things in the game such as the size of the grid or the number of mines hidden within it.

Case Study: Minesweeper Output

```
Welcome to MineSweeper!
Please choose game difficulty (NOTE: Difficulty: 1 to 10): 3
```

Functional Decomposition

Functional decomposition is the process of breaking down a complex problem or system into parts that are easier to conceive, understand, program, and maintain.

"Bake the cookies"

Wet

- Mix butter and sugar
- Beat in eggs & vanilla

Dry

• Mix in flour, baking soda, and chocolate chips

Place

- Make cookie-sized balls of dough
- Place evenly on baking sheet

- Bake at 350 degrees Fahrenheit for 10 minutes
- Let cool after

Functional Decomposition

In our code, functional decomposition often means breaking a task into smaller methods (also called functions).

Example: Minesweeper

- Introduce the game
- Set up blank game board
- Randomly decide where to place mines
- Place counts in each non-mine square

Avoid Trivial Methods

Introduce methods to decompose a complex problem, not just for the sake of adding a method.

Bad example:

```
public static void printMessage(String message) {
    System.out.println(message);
}
```

Good Example:

```
public static double round(double num) {
   return ((int) Math.round(num * 10)) / 10.0;
}
```

Rule of thumb: A method should do at least two steps

- Ask yourself: Does adding this method make my code easier to understand?

Code Quality

"Programs are meant to be read by humans and only incidentally for computers to execute." – Abelson & Sussman, SICP

Code is about <u>communication</u>. Writing code with good **code quality** is important to communicate effectively.

Different organizations have different standards for code quality.

- Doesn't mean any one standard is wrong! (e.g., APA, MLA, Chicago, IEEE, ...)
- Consistency is very helpful within a group project
- See our Code Quality Guide for the standards we will all use in CSE 122

CSE 122 Code Quality

Examples relevant for this week

- Naming conventions
- Descriptive variable names
- Indentation
- Long lines
- Spacing
- Good method decomposition
- Writing documentation

What does this code do? How could you improve the quality of this code?

```
public static int l(String a,char b){
    int j=-1;for(int a1=0;a1<a.length();a1 ++) {
    if (a.charAt(a1) == b) {
        j = a1;
        } if(j==-1){return -1;} else {
    return j;} }</pre>
```

No Slido poll!

Creative Project 0

- Released today, due next Thursday (Jan 16) at 11:59 pm PT on Ed
 - Can hit the "Submit" button multiple times we will grade the last submission made before the initial deadline.
 - Build good habits: Don't "shotgun debug"
 - While you can resubmit this assignment, it's important to meet due date to get as much feedback as possible.
- Focused on reviewing Java concepts and Functional Decomposition
- See <u>Grading Rubric</u> to know what to expect
- IPL opens Monday!
