

Comparable + Huffman

Hitesh Boinpally
Summer 2023

Agenda

- Comparable
- P3 - Huffman

Agenda

- Comparable ←
- P3 - Huffman

Interfaces Review

- Define set of behavior a class can implement
- “Contract”, “Certification”
- List and Set are some interfaces we’ve used
- To utilize:

```
public class Tesla implements Car
```
- Says that Tesla “implements” the Car interface

The Comparable Interface

- Say you had a `FootballTeam` class and wanted to sort them
 - How could you tell Java how to sort them?

The Comparable Interface

- Say you had a `FootballTeam` class and wanted to sort them
 - How could you tell Java how to sort them?
- Utilize the `Comparable` interface!
 - Fixed definition of how to compare objects
 - This is needed to allow objects to be added to `TreeSets` and `TreeMaps`

Agenda

- Comparable
- P3 - Huffman ←

Priority Queues and Huffman Encoding

Introduction to the Final Project

Hunter Schafer

CSE 143, Autumn 2021

Priority Queue

Priority Queue

A collection of ordered elements that provides fast access to the minimum (or maximum) element.

```
public class PriorityQueue<E> implements Queue<E>
```

<code>PriorityQueue<E>()</code>	constructs an empty queue
<code>add(E value)</code>	adds value in sorted order to the queue
<code>peek()</code>	returns minimum element in queue
<code>remove()</code>	removes/returns minimum element in queue
<code>size()</code>	returns the number of elements in queue

```
Queue<String> tas = new PriorityQueue<String>();  
tas.add("Watson");  
tas.add("Sherlock");  
tas.remove();
```

Priority Queue

Priority Queue

A collection of ordered elements that provides fast access to the minimum (or maximum) element.

```
public class PriorityQueue<E> implements Queue<E>
```

<code>PriorityQueue<E>()</code>	constructs an empty queue
<code>add(E value)</code>	adds value in sorted order to the queue
<code>peek()</code>	returns minimum element in queue
<code>remove()</code>	removes/returns minimum element in queue
<code>size()</code>	returns the number of elements in queue

```
Queue<String> tas = new PriorityQueue<String>();  
tas.add("Watson");  
tas.add("Sherlock");  
tas.remove(); // "Sherlock"
```

Final Project: Huffman Coding

Compression

Process of encoding information so that it takes up less space.

Compression applies to many things!

- Store photos without taking up the whole hard-drive
- Reduce size of email attachment
- Make web pages smaller so they load faster
- Make voice calls over a low-bandwidth connection (cell, Skype)

Common compression programs:

- WinZip, WinRar for Windows
- zip

ASCII (American Standard Code for Information Interchange)

Standardized code for mapping characters to integers

- Many text files on your computer are in ASCII.
- But, computers need numbers represented in binary!

Character	ASCII value
' '	32
'a'	97
'b'	98
'c'	99
'e'	101
'z'	122

ASCII (American Standard Code for Information Interchange)

Standardized code for mapping characters to integers

- Many text files on your computer are in ASCII.
- But, computers need numbers represented in binary!

Every character is represented by a byte (8 bits).

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab z

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab z

Answer

01100011

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab z

Answer

01100011 01100001

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab_z

Answer

01100011 01100001 01100010

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab_z

Answer

01100011 01100001 01100010 00100000

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab z

Answer

01100011 01100001 01100010 00100000 01111010

ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

What is the binary representation of the following String?

cab z

Answer

0110001101100001011000100010000001111010

Another ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

How do we read the following binary as ASCII?

011000010110001101100101

Another ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

How do we read the following binary as ASCII?

01100001 01100011 01100101

Answer

Another ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

How do we read the following binary as ASCII?

01100001 01100011 01100101

Answer

a

Another ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

How do we read the following binary as ASCII?

01100001 01100011 01100101

Answer

ac

Another ASCII Example

Character	ASCII value	Binary Representation
' '	32	00100000
'a'	97	01100001
'b'	98	01100010
'c'	99	01100011
'e'	101	01100101
'z'	122	01111010

How do we read the following binary as ASCII?

01100001 01100011 01100101

Answer

ace

Huffman's Insight

Use variable length encodings for different characters to take advantage of frequencies in which characters appear.

- Make more frequent characters take up less space.
- Don't have codes for unused characters.
- Some characters may end up with longer encodings, but this should happen infrequently.

Huffman Encoding

- Create a “Huffman Tree” that gives a good binary representation for each character.
- The path from the root to the character leaf is the encoding for that character; left means 0, right means 1.

ASCII Table

Character	Binary Representation
' '	00100000
'a'	01100001
'b'	01100010
'c'	01100011
'e'	01100101
'z'	01111010

Huffman Tree

The final project asks you to write a class that manages creating and using this Huffman code.

- (A) Create a Huffman Code from a file and compress it.
- (B) Decompress the file to get original contents.

Part A: Making a HuffmanCode Overview

Input File Contents

```
bad cab
```

Part A: Making a HuffmanCode Overview

Input File Contents

```
bad cab
```

Step 1: Count the occurrences of each character in file

```
{ ' '=1, 'a'=2, 'b'=2, 'c'=1, 'd'=1 }
```

Part A: Making a HuffmanCode Overview

Input File Contents

bad cab

Step 1: Count the occurrences of each character in file

{ ' ' =1, 'a'=2, 'b'=2, 'c'=1, 'd'=1 }

Step 2: Make leaf nodes for all the characters. Place in a PriorityQueue

Part A: Making a HuffmanCode Overview

Input File Contents

bad cab

Step 1: Count the occurrences of each character in file

{ ' ' =1, 'a'=2, 'b'=2, 'c'=1, 'd'=1 }

Step 2: Make leaf nodes for all the characters. Place in a PriorityQueue

Step 3: Use Huffman Tree building algorithm (described soon)

Part A: Making a HuffmanCode Overview

Input File Contents

bad cab

Step 1: Count the occurrences of each character in file

{ ' '=1, 'a'=2, 'b'=2, 'c'=1, 'd'=1 }

Step 2: Make leaf nodes for all the characters. Place in a PriorityQueue

Step 3: Use Huffman Tree building algorithm (described soon)

Step 4: Save encoding to .code file to encode/decode later.

{ 'd'=00, 'a'=01, 'b'=10, ' '=110, 'c'=111 }

Part A: Making a HuffmanCode Overview

Input File Contents

bad cab

Step 1: Count the occurrences of each character in file

{ ' ' =1, 'a'=2, 'b'=2, 'c'=1, 'd'=1 }

Step 2: Make leaf nodes for all the characters. Place in a PriorityQueue

Step 3: Use Huffman Tree building algorithm (described soon)

Step 4: Save encoding to .code file to encode/decode later.

{ 'd'=00, 'a'=01, 'b'=10, ' '=110, 'c'=111 }

Step 5: Compress the input file using the encodings

Compressed Output: 1001001101110110

Step 1: Count Character Occurrences

We do this step for you

Input File

```
bad cab
```

Generate Counts Array:

index	0	1	...	32	...	97	98	99	100	101
value	0	0				2	2	1	1	0

Step 2: Create PriorityQueue

- Store each character and its frequency in a `HuffmanNode` object.
- Place all the `HuffmanNodes` in a `PriorityQueue` so that they are in ascending order with respect to frequency

Step 3: Remove and Merge

Step 3: Remove and Merge

Step 3: Remove and Merge

Step 3: Remove and Merge

Step 3: Remove and Merge

Step 3: Remove and Merge

Step 3: Remove and Merge

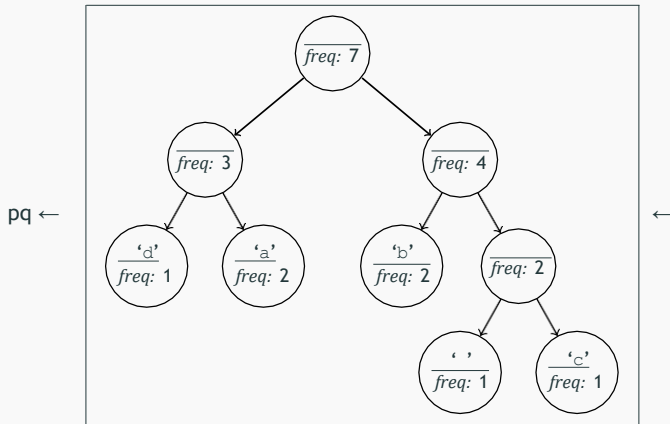

Step 3: Remove and Merge

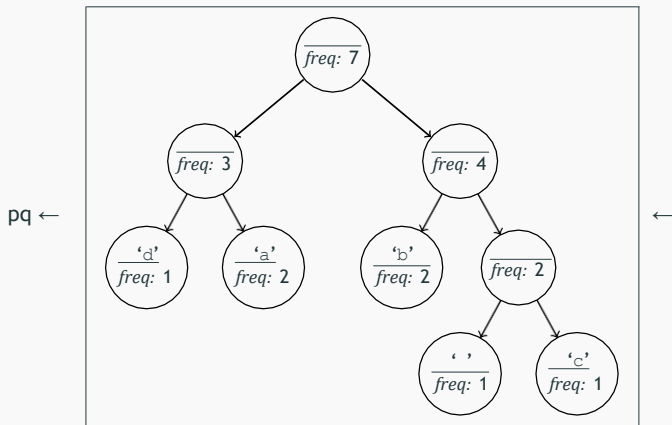

pq ← ←

Step 3: Remove and Merge

Step 3: Remove and Merge

- What is the relationship between frequency in file and binary representation length?

Step 3: Remove and Merge Algorithm

Algorithm Pseudocode

```
while P.Q. size > 1:  
    remove two nodes with lowest frequency  
    combine into a single node  
    put that node back in the P.Q.
```

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Output of `save`

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Output of `save`

```
100  
00
```

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Output of `save`

```
100  
00  
97  
01
```

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Output of `save`

```
100  
00  
97  
01  
98  
10
```

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Output of `save`

```
100  
00  
97  
01  
98  
10  
32  
110
```

Step 4: Print Encodings

Save the tree to a file to save the encodings for the characters we made.

Output of save

```
100  
00  
97  
01  
98  
10  
32  
110  
99  
111
```

Step 5: Compress the File

We do this step for you

Take the original file and the `.code` file produced in last step to translate into the new binary encoding.

Input File

bad cab

Compressed Output

Huffman Encoding

100

00

97

01

98

10

32

110

99

111

Step 5: Compress the File

We do this step for you

Take the original file and the `.code` file produced in last step to translate into the new binary encoding.

Input File

bad cab

Compressed Output

Huffman Encoding

100 'd'

00

97 'a'

01

98 'b'

10

32 ' '

110

99 'c'

111

Step 5: Compress the File

We do this step for you

Take the original file and the `.code` file produced in last step to translate into the new binary encoding.

Input File

bad cab

Compressed Output

10 01 00 110 111 01 10

Huffman Encoding

100 'd'

110

99 'c'

111

Part B: Decompressing the File

Step 1: Reconstruct the Huffman tree from the code file

Step 2: Translate the compressed bits back to their character values.

Step 1: Reconstruct the Huffman Tree

Now are just given the code file produced by our program and we need to reconstruct the tree.

Input code File

```
97
0
101
100
32
101
112
11
```

Initially the tree is empty

```

      0      1
      /      \
     'a'      'p'
          /      \
         0      1
        /      \
       'e'      ' '
```

Step 1: Reconstruct the Huffman Tree

Now are just given the code file produced by our program and we need to reconstruct the tree.

Input code File

```
97
0
101
100
32
101
112
11
```

Tree after processing first pair

Step 1: Reconstruct the Huffman Tree

Now are just given the code file produced by our program and we need to reconstruct the tree.

Input code File

```
97
0
101
100
32
101
112
11
```

Tree after processing second pair

Step 1: Reconstruct the Huffman Tree

Now are just given the code file produced by our program and we need to reconstruct the tree.

Input code File

```
97
0
101
100
32
101
112
11
```

Tree after processing third pair

Step 1: Reconstruct the Huffman Tree

Now are just given the code file produced by our program and we need to reconstruct the tree.

Input code File

```
97
0
101
100
32
101
112
11
```

Tree after processing last pair

Step 2 Example

After building up tree, we will read the compressed file bit by bit.

Input

0101110110101011100

Output

Step 2 Example

After building up tree, we will read the compressed file bit by bit.

Input

0101110110101011100

Output

a papa ape

Working with Bits? That Sounds a Little Bit Hard

Reading bits in Java is kind of tricky, we are providing a class to help!

```
public class BitInputStream
```

<code>BitInputStream(String file)</code>	Creates a stream of bits from file
<code>hasNextBit()</code>	Returns true if bits remain in the stream
<code>nextBit()</code>	Reads and returns the next bit in the stream

Part A: Compression

```
public HuffmanCode(int[] counts)
```

- Slides 11-13

```
public void save(PrintStream out)
```

- Slide 14

Part B: Decompression

```
public HuffmanCode(Scanner input)
```

- Slide 17

```
public void translate(BitInputStream in,  
                    PrintStream out)
```

- Slide 18
