sli.do #cse123A

BEFORE WE START

Talk to your neighbors:*What's your favorite
data structure to use?***Instructors: Nathan Brunelle**

Arohan	Ashar	Neha	Rohini	Rushil
Ido	Zachary	Sebastian	Joshua	Sean
Hayden	Caleb	Justin	Heon	Rashad
Srihari	Benoit	Derek	Chris	Bhaumik
Kuhu	Kavya	Cynthia	Shreya	Ashley
Ziao	Kieran	Marcus	Crystal	Eeshani
Prakshi	Packard	Cora	Dixon	Nichole
Niyati	Trien	Lawrence	Evan	Cady

Lecture Outline

- **Announcements** 
- Reference Semantics Review
- Contiguous / Non-Contiguous Memory Review
- ListNode Practice

Announcements

- Creative Project 0 feedback will be released today
- [Resubmission Cycle 0 open](#), closes on Fri (April 18)
 - Normally resubmissions will be open Mon – Fri each week
- Programming Assignment 0 due tonight, Wed April 16 at 11:59pm!
 - See generic [Programming Assignment rubric](#) posted on website
- Creative Project 1 will be released tomorrow, Thurs April 17
 - Focused on design and implementation of data structures
- Quiz 0 next week (Tues, April 22)
 - [Ed announcement](#)

Reference Semantics

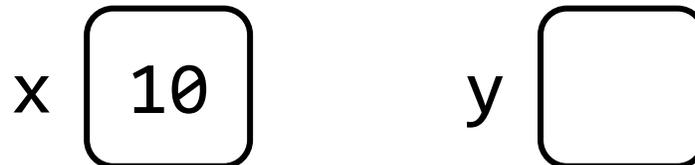

- In Java, variables are treated two different ways:

Value Semantics	Reference Semantics
Primitive types (int, double, boolean) + Strings	Object types (int[], Scanner, ArrayList)
Values stored locally	Values stored in memory, reference stored locally
Initialization copies value (many copies of value)	Initialization copies reference (only one value)

```
int x = 10;  
int y = x;  
  
y++; // x remains unchanged
```

```
int[] x = new int[5];  
int[] y = x;  
  
y[0]++; // x[0] changed
```

- We often draw “reference diagrams” to keep track of everything

Reference Semantics

- In Java, variables are treated two different ways:

Value Semantics	Reference Semantics

Contiguous vs. Non-contiguous: Memory

- Computer memory = one really, *really* big array.

Memory

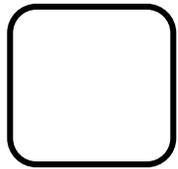

85	47	-51	44	-38	35	-58	79	27	-14
-24	-38	-66	-27	36	-1	23	20	31	-40
-34	38	37	-52	-15	99	6	68	-67	-58
13	-17	-85	-99	-20	-33	54	38	-66	8
36	24	27	90	-32	72	-73	11	-85	29
-90	-64	29	-27	91	64	28	-97	44	59
-68	76	-1	-6	-52	77	21	37	80	69

Contiguous vs. Non-contiguous: array (1)

- Computer memory = one really, *really* big array.
 - `int[] arr = new int[10];`

Memory

arr

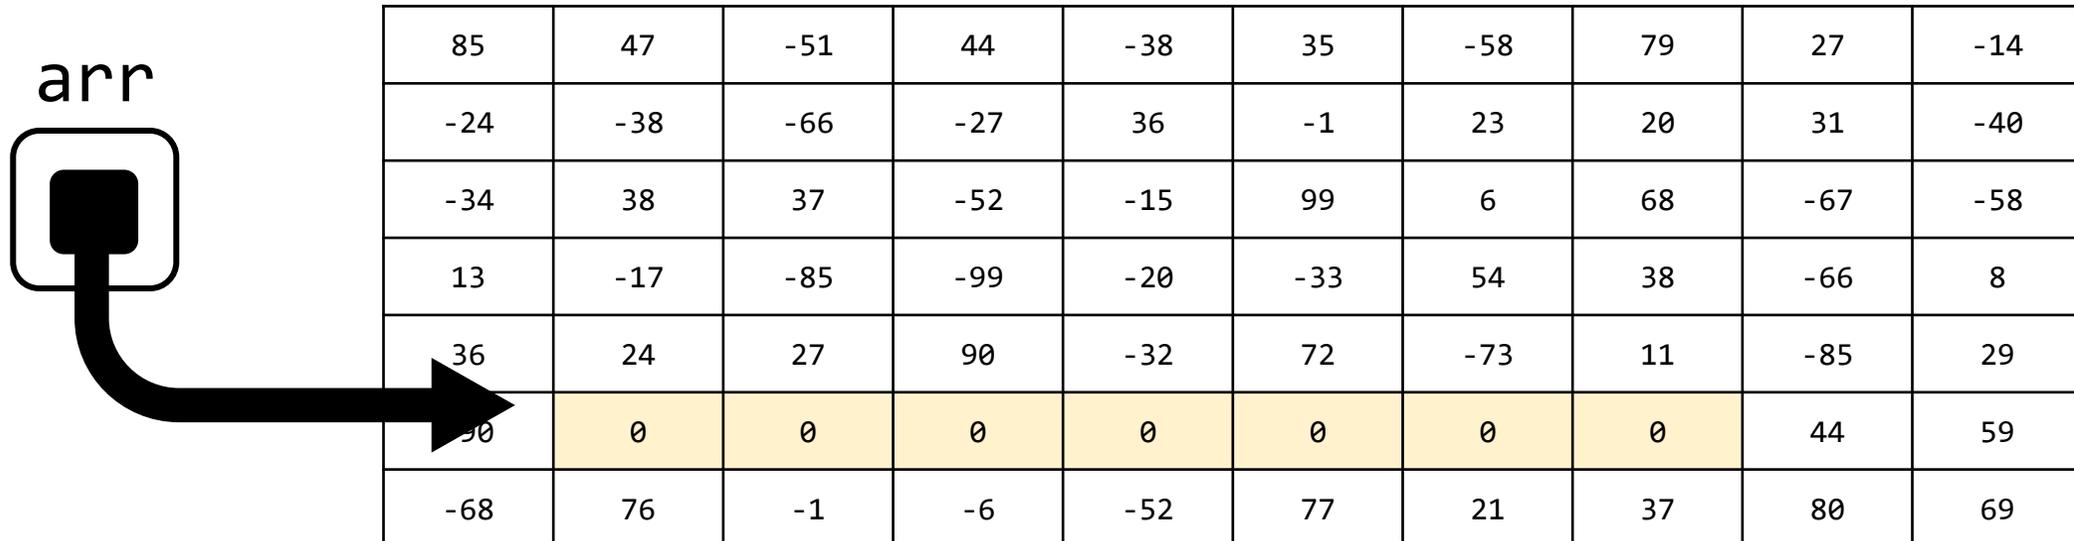

85	47	-51	44	-38	35	-58	79	27	-14
-24	-38	-66	-27	36	-1	23	20	31	-40
-34	38	37	-52	-15	99	6	68	-67	-58
13	-17	-85	-99	-20	-33	54	38	-66	8
36	24	27	90	-32	72	-73	11	-85	29
-90	-64	29	-27	91	64	28	-97	44	59
-68	76	-1	-6	-52	77	21	37	80	69

Contiguous vs. Non-contiguous: array (2)

- Computer memory = one really, *really* big array.

- `int[] arr = new int[7];`

Memory

85	47	-51	44	-38	35	-58	79	27	-14
-24	-38	-66	-27	36	-1	23	20	31	-40
-34	38	37	-52	-15	99	6	68	-67	-58
13	-17	-85	-99	-20	-33	54	38	-66	8
36	24	27	90	-32	72	-73	11	-85	29
50	0	0	0	0	0	0	0	44	59
-68	76	-1	-6	-52	77	21	37	80	69

We call this “contiguous” memory

ListNode

- Java class representing a “**node**”
- Two fields to store discussed state:
 - Fields are public?! We’ll come back to this
- Why can `ListNode` be a field in the `ListNode` class?

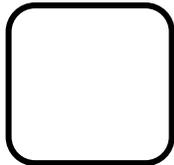

```
public class ListNode {  
    public int data;  
    public ListNode next;  
}
```

Contiguous vs. Non-contiguous: ListNode (1)

- Computer memory = one really, *really* big array.
 - `ListNode list = new ListNode(1, new ListNode(2));`

Memory

`list`

85	47	-51	44	-38	35	-58	79	27	-14
-24	-38	-1	-27	36	-1	23	20	31	-40
-34	38	37	-52	-15	99	6	68	-67	-58
13	-17	-85	-99	-20	-33	54	38	-66	8
36	24	27	90	-32	72	-73	11	-85	29
-90	-64	29	-27	91	64	28	-97	44	59
-68	76	-1	-6	-52	77	21	37	80	69

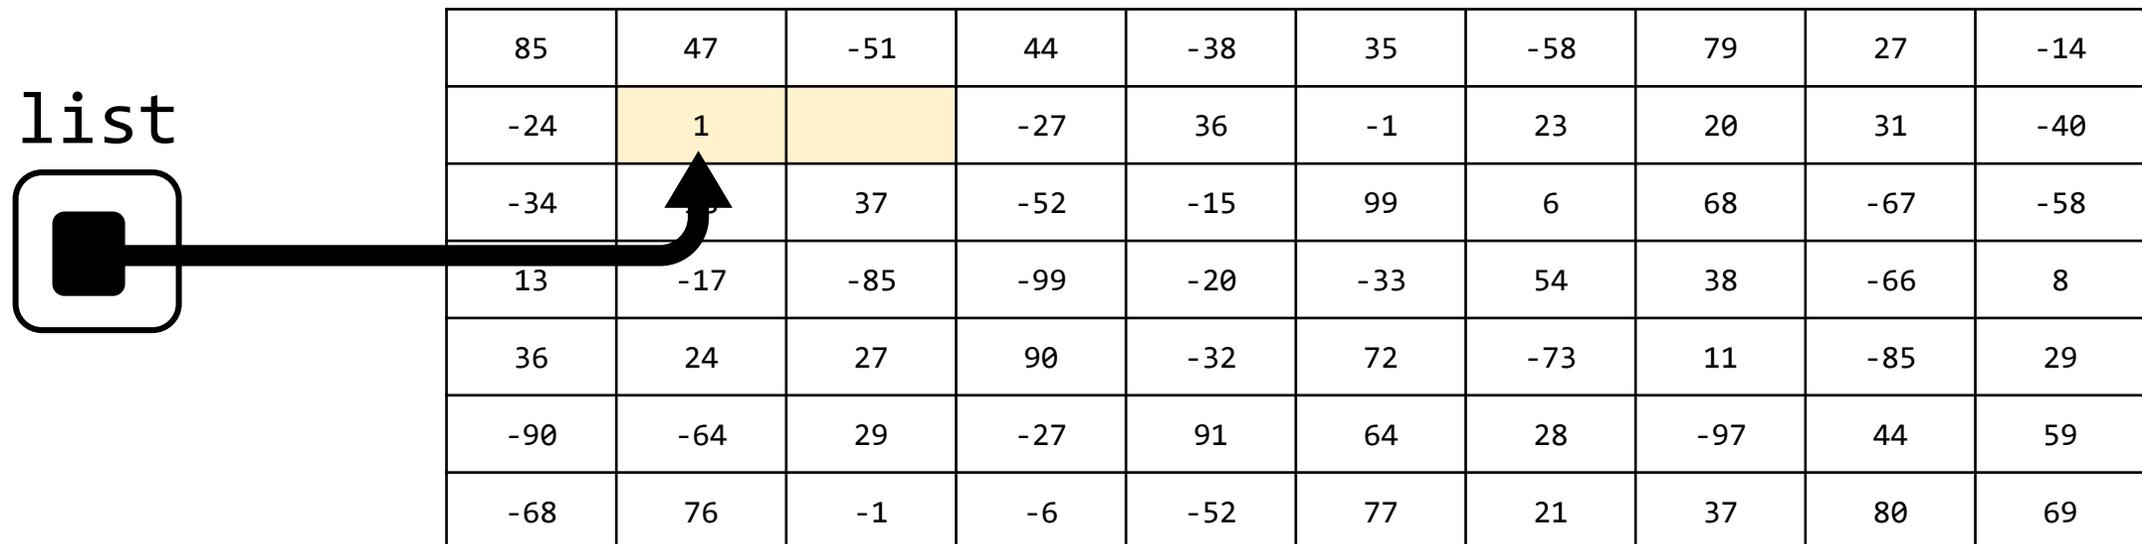

Contiguous vs. Non-contiguous: ListNode (2)

- Computer memory = one really, *really* big array.

```
ListNode list = new ListNode(1, new ListNode(2));
```

Memory

list

85	47	-51	44	-38	35	-58	79	27	-14
-24	1		-27	36	-1	23	20	31	-40
-34		37	-52	-15	99	6	68	-67	-58
13	-17	-85	-99	-20	-33	54	38	-66	8
36	24	27	90	-32	72	-73	11	-85	29
-90	-64	29	-27	91	64	28	-97	44	59
-68	76	-1	-6	-52	77	21	37	80	69

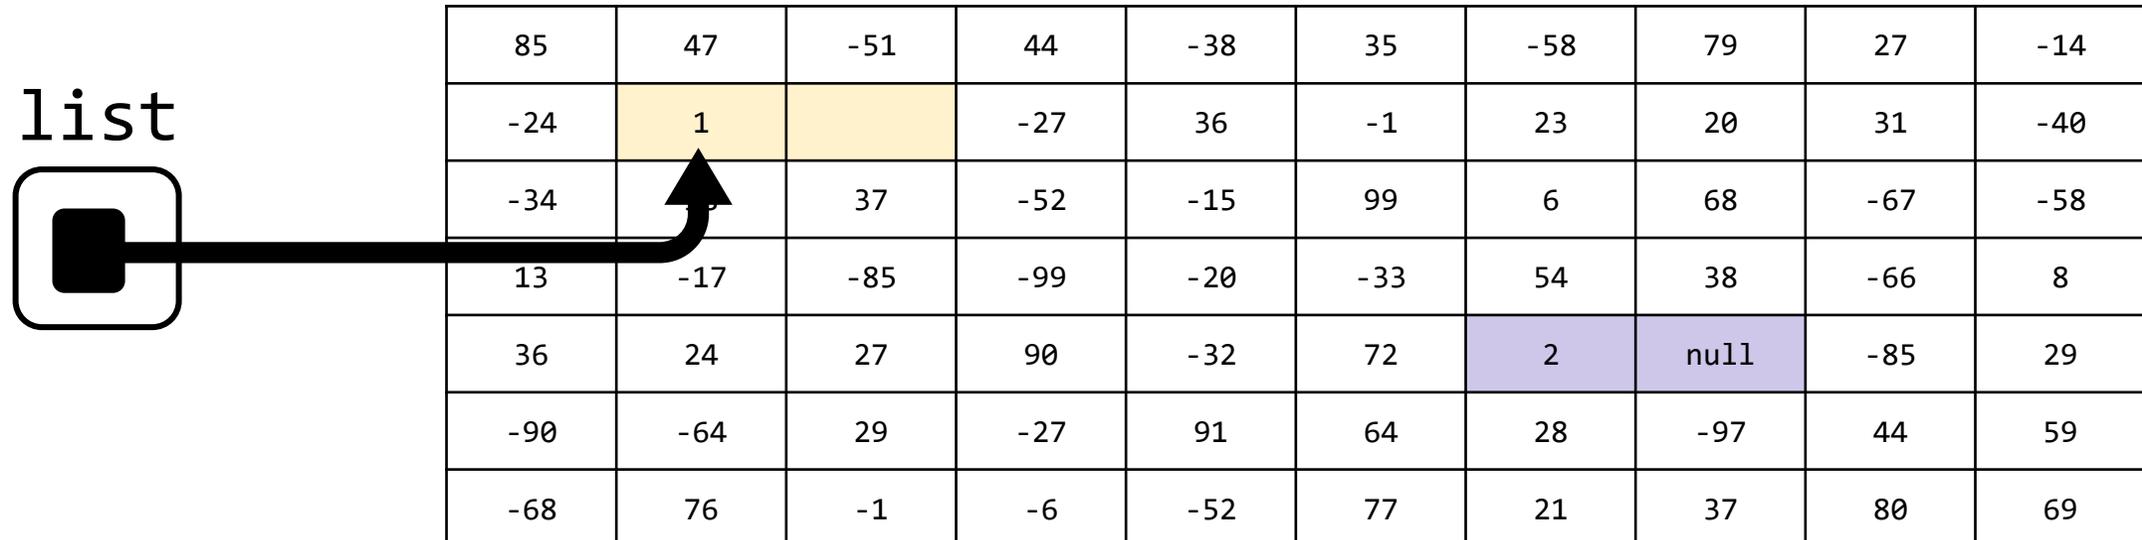

Contiguous vs. Non-contiguous: ListNode (3)

- Computer memory = one really, *really* big array.

```
ListNode list = new ListNode(1, new ListNode(2));
```

Memory

list

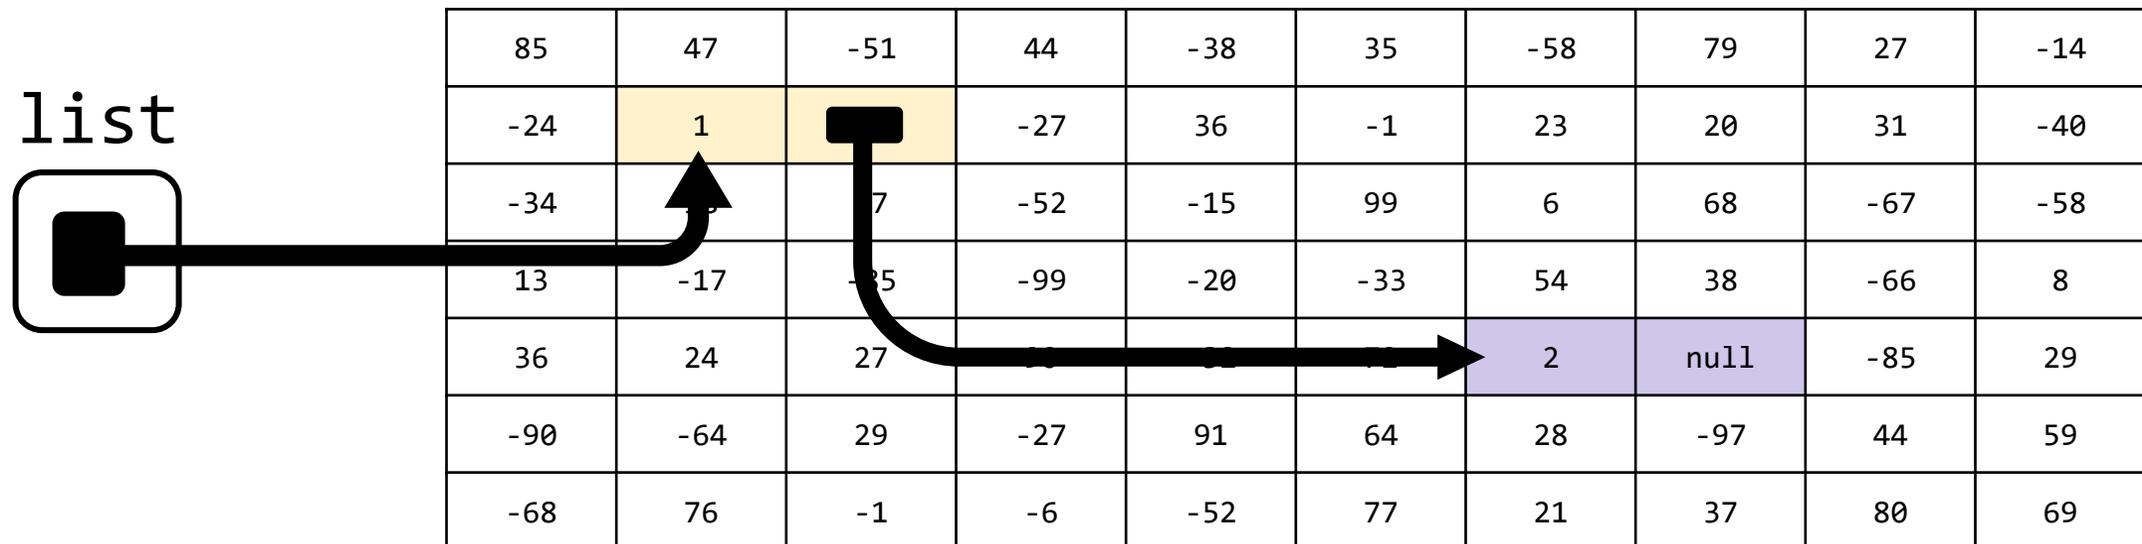

85	47	-51	44	-38	35	-58	79	27	-14
-24	1		-27	36	-1	23	20	31	-40
-34		37	-52	-15	99	6	68	-67	-58
13	-17	-85	-99	-20	-33	54	38	-66	8
36	24	27	90	-32	72	2	null	-85	29
-90	-64	29	-27	91	64	28	-97	44	59
-68	76	-1	-6	-52	77	21	37	80	69

Contiguous vs. Non-contiguous: ListNode (4)

- Computer memory = one really, *really* big array.

```
ListNode list = new ListNode(1, new ListNode(2));
```

Memory

Contiguous vs. Non-contiguous: Summary

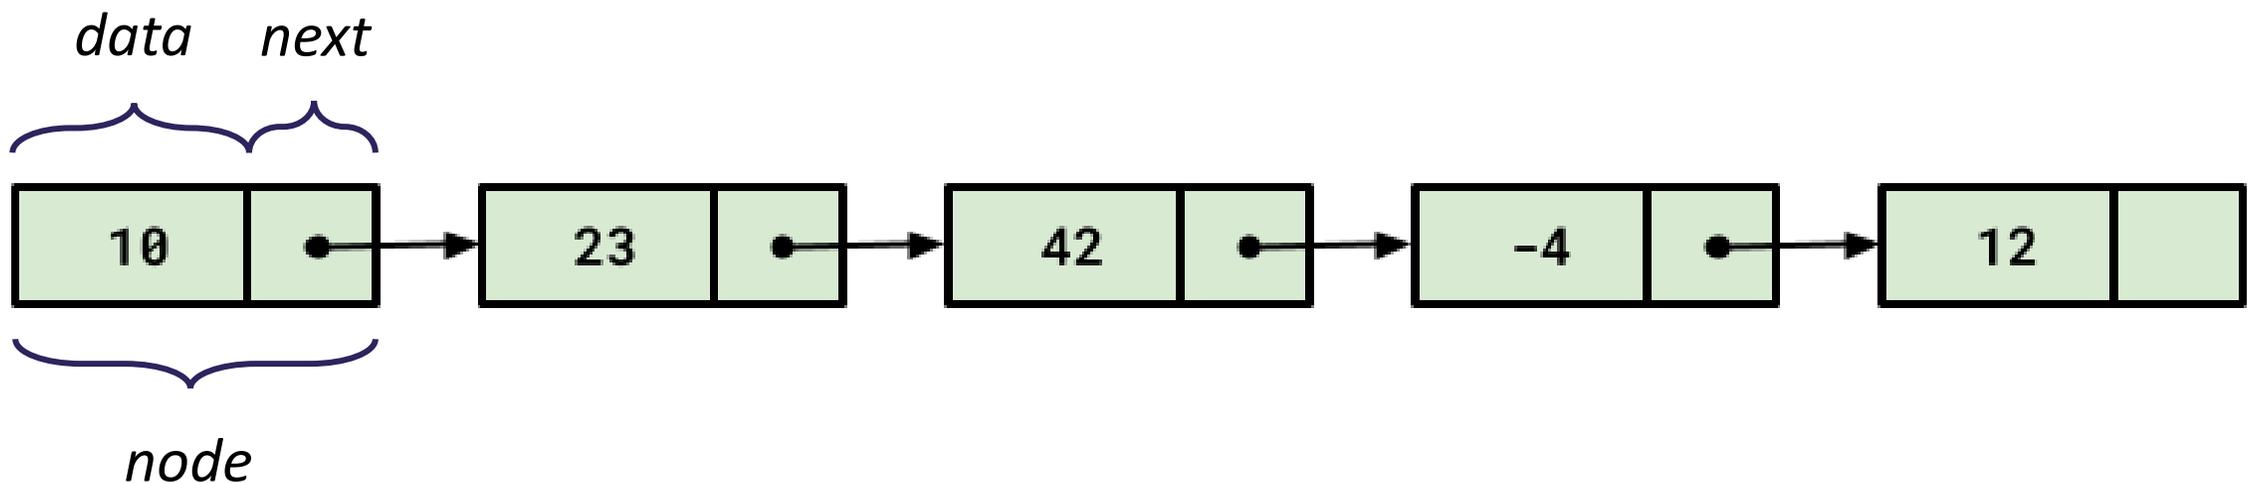

- Computer memory = one really, *really* big array.
- Contiguous memory = impossible to resize directly
 - Surrounding stuff in memory (we can't just overwrite)
 - Best we can manage is get more space and copy
- Non-contiguous memory = easy to resize
 - Just get some more memory and link it to the rest

Lecture Outline

- Reference Semantics Review
- Contiguous / Non-Contiguous Memory Review
- **ListNode Practice** 

Linked Nodes

- We want to chain together ints “**non-contiguously**”
- Accomplish this with nodes we link together
 - Each node stores an `int` (*data*) and an reference to the next node (*next*)

Iterating over ListNodes

- General pattern iteration code will follow:

```
ListNode curr = front;
while (curr != null) {
    // Do something

    curr = curr.next;
}
```
