CSE 123

Binary Trees

Questions during Class?

Raise hand or send here

sli.do #cse123

BEFORE WE START

*Talk to your neighbors:**What's your favorite tree?***Instructors:** Brett Wortzman
Miya Natsuhara**TAs:**

Arohan	Neha	Rushil	Johnathan	Nicholas
Sean	Hayden	Srihari	Benoit	Isayah
Audrey	Chris	Andras	Jessica	Kavya
Cynthia	Shreya	Kieran	Rohan	Eeshani
Amy	Packard	Cora	Dixon	Nichole
Trien	Lawrence	Liza	Helena	

Music: [CSE 123 25wi Lecture Tunes](#)

Lecture Outline

- **Announcements** 
- Binary Tree Review
- Traversals
- Practice!

Announcements

- Resubmission Cycle 4 is due tonight at 11:59pm
 - C1, P1 eligible
- Programming Assignment 2 is out, due Wednesday (Feb 26)
- Final Exam: **Tuesday, March 18 at 12:30pm – 2:20pm**

Lecture Outline

- Announcements
- **Binary Tree Review** 
- Traversals
- Practice!

Binary Trees

- Last data structure of the quarter!
 - Very similar to LinkedLists...

Binary Trees

- Last data structure of the quarter!
 - Very similar to LinkedLists...

Binary Trees

- Last data structure of the quarter!
 - Very similar to `LinkedLists`...
- Linked `TreeNode`s w/ 3 fields:
 - `int data`, `TreeNode left`, `TreeNode right`
 - Doubly complicated!

Binary Trees

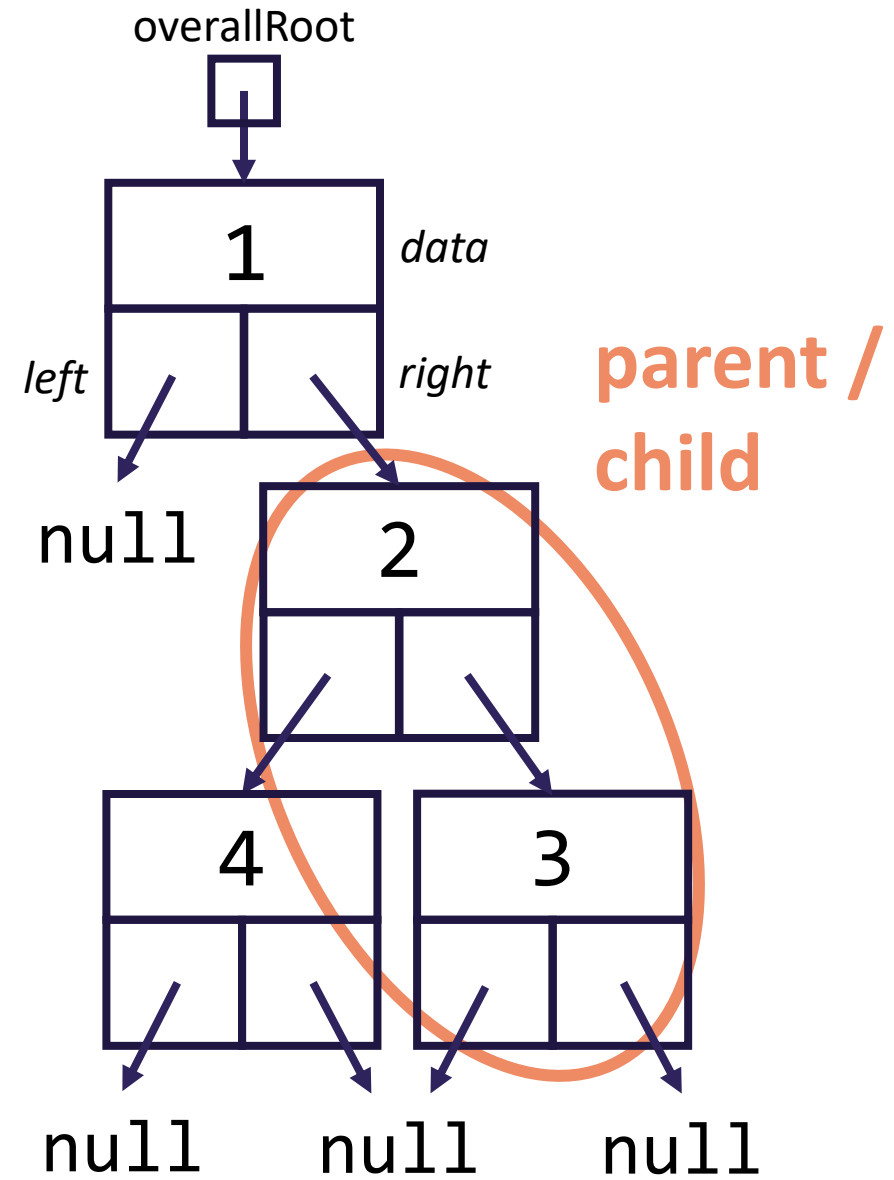

- Last data structure of the quarter!
 - Very similar to `LinkedLists`...
- Linked `TreeNode`s w/ 3 fields:
 - `int data`, `TreeNode left`, `TreeNode right`
 - Doubly complicated!
- Similar to trees?
 - Clear enough!
 - Terminology: root / leaves

- Other terminology as well

Tree Terminology

Tree Terminology

Linked Lists [Review]

- A linked list is either:

Empty list

Node w/ another linked list

This is a recursive definition!

A list is either empty or a node with another list!

Binary Trees

- A Binary Tree is either:

Empty tree

Node w/ two subtrees

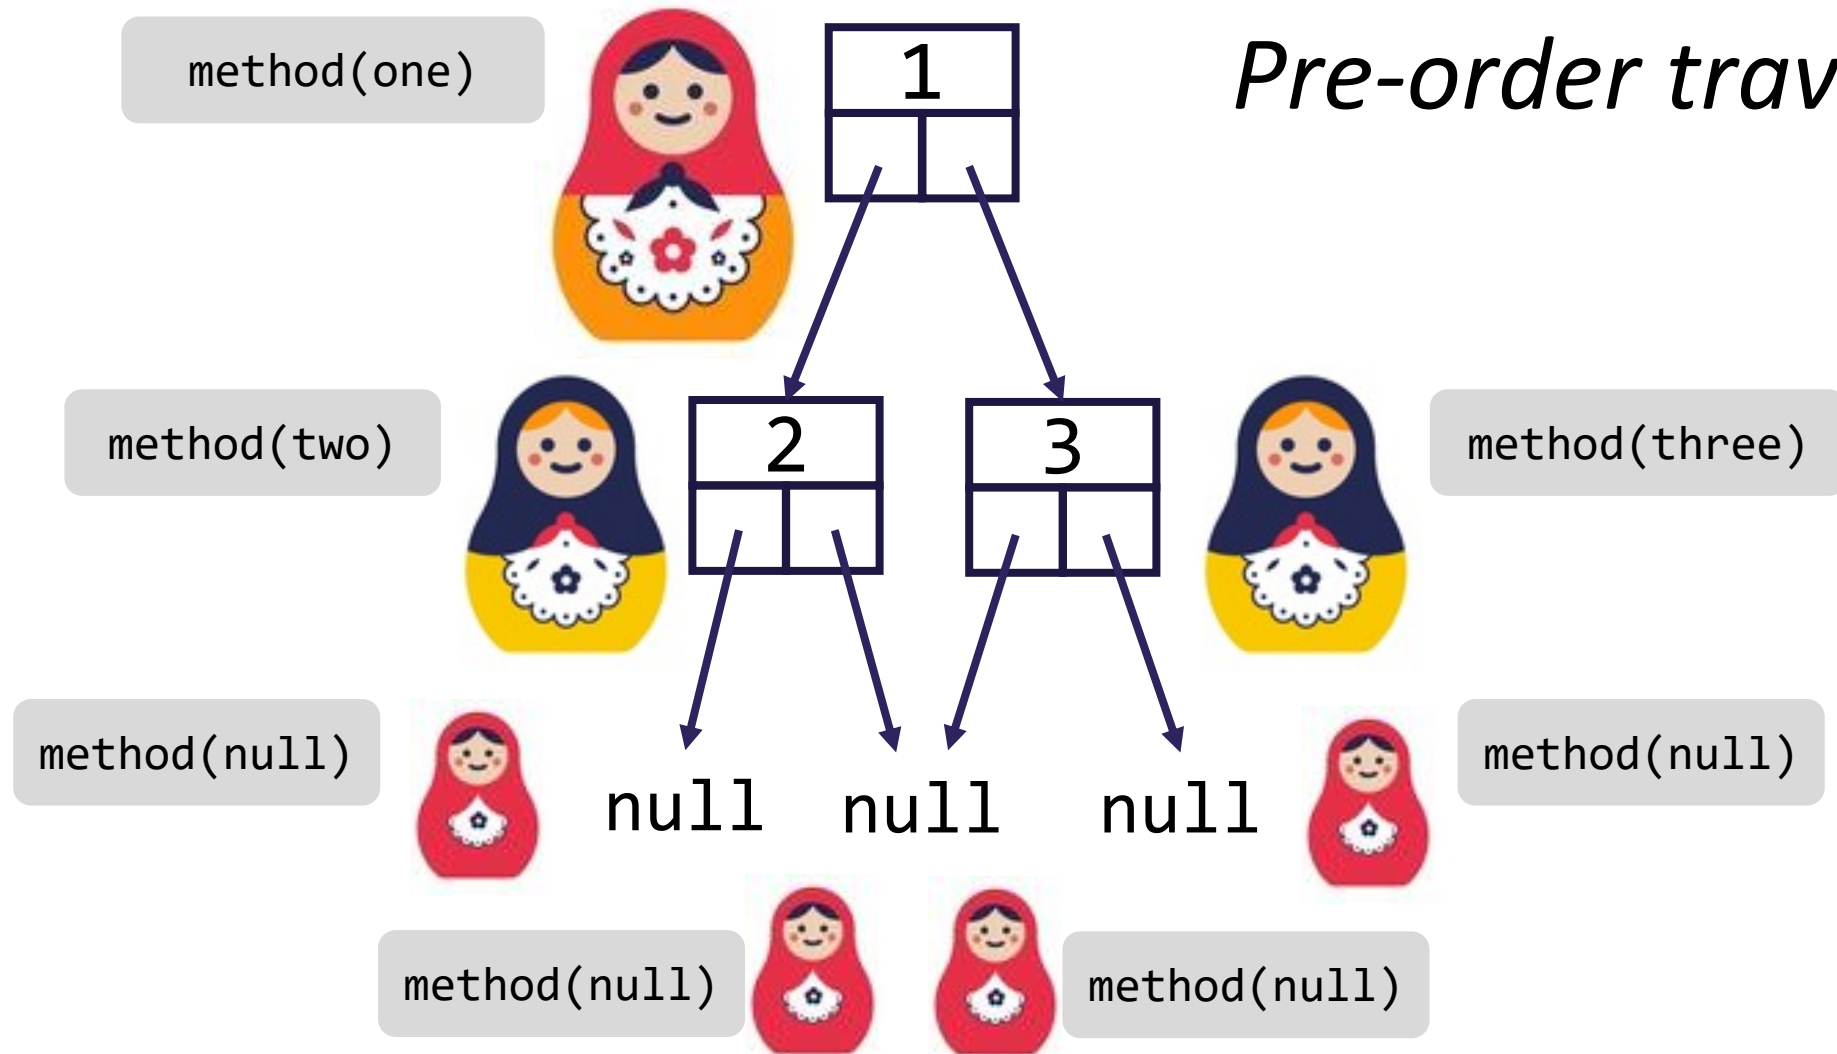

*This is a recursive definition!
A tree is either empty or a node with two more trees!*

Binary Tree Programming

- Programs look very similar to Recursive LinkedList!
- Guaranteed base case: empty tree
 - Simplest possible input, should immediately know the return
- Guaranteed public / private pair
 - Need to know which subtree you're currently processing
- If modifying, we use $x = \text{change}(x)$
 - Don't stop early, return updated subtree (`IntTreeNode`)
- Let's trace through an example together...

Tracing Through Binary Tree Programming

Pre-order traversal

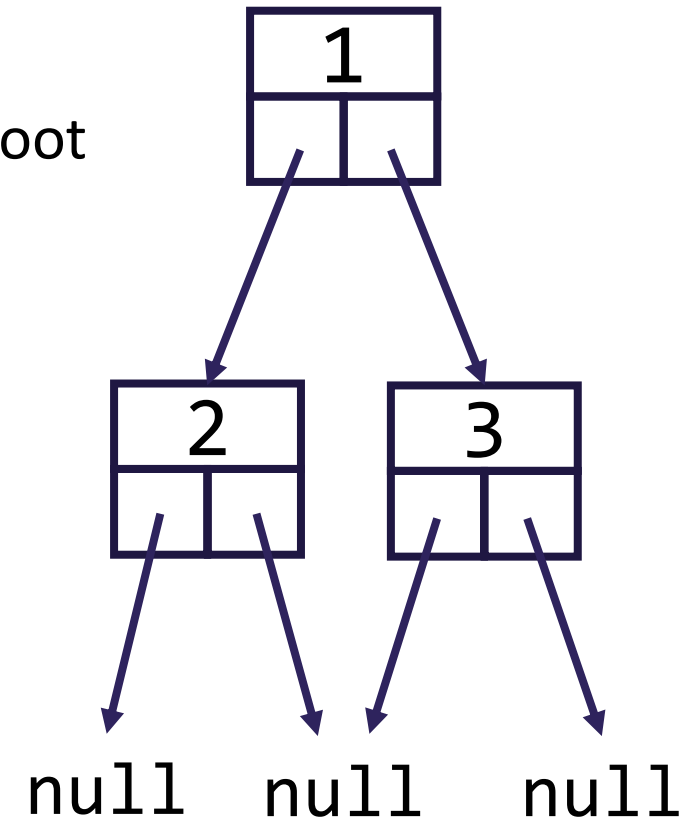

Lecture Outline

- Announcements
- Binary Tree Review
- **Traversals** 
- Practice!

Binary Tree Traversals

- 3 different primary traversals
 - All concerned with when you process your current root
- Pre-order traversal:
 - Process **root**, left subtree, right subtree
- In-order traversal:
 - Process left subtree, **root**, right subtree
- Post-order traversal:
 - Process left subtree, right subtree, **root**

Sometimes different traversals yield different results

Practice : Think

sli.do

#cse123

Enter the order in which the nodes of this tree would be visited in a pre-order traversal.

Practice : Pair

sli.do

#cse123

Enter the order in which the nodes of this tree would be visited in a pre-order traversal.

Practice : Pair

sli.do

#cse123

Enter the order in which the nodes of this tree would be visited in an in-order traversal.

Practice : Pair

sli.do

#cse123

Enter the order in which the nodes of this tree would be visited in a post-order traversal.

Lecture Outline

- Announcements
- Binary Tree Review
- Traversals
- **Practice!** 

Tracing through size

```
public int size() {  
    return size(overallRoot);  
}  
  
private int size(IntTreeNode currentRoot) {  
    if (currentRoot == null) {  
        return 0;  
    } else {  
        return 1 +  
            size(currentRoot.left) +  
            size(currentRoot.right);  
    }  
}
```
