

CSE 142 Programming I

Multidimensional Arrays

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-1

Arrays So Far

- Arrays let us collect many pieces of information in one place
- Limited—we can only store a “list” of items
- What other kinds of tables might we wish to keep track of? (Think homework!)

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-2

2-Dimensional Arrays

- An ordered collection of data—just like the 1-D arrays that we’ve seen already
- Now they’ll be ordered in TWO directions
- All of the items still must be of the same type

M-3

2-D Array Picture:

	test #		
score	0	1	2
0	22	22	22
1	50	48	49
2	10	0	0
3	45	37	41
4	39	28	31
5	18	22	35
6	16	50	3
7	42	29	37

← score[3][1]

M-4

Declaring a 2-D Array

```
#define NUM_STDNTS 8
#define NUM_TSTS 3

int score[NUM_STDNTS][NUM_TSTS];
```

- This declares the previous array

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-5

2 Views of 2D Arrays

- We can either think of scores as an 8 by 3 array of scores...
- ...or as an array of 8 one dimensional arrays of size 3

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-6

Accessing Array Elements

- We access the elements of the array just like we did for 1-D arrays, but now with 2 subscripts:

```
scores [5] [1];
```

- As before, each element of the array behaves exactly like a regular variable

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-7

How To Read in A 2-D Array

- With 1-D arrays we used loops
- With 2-D arrays we'll use...?

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-8

Reading in an Array

- Read in test scores for 8 students:

```
int i, j, scores[8][3];
for (i=0; i<8; i++){
    for (j=0; j<3; j++){
        scanf("%d", &scores[i][j]);
    }
}
```

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-9

Printing the Array

- Same idea: loops!

```
for (i=0; i<8; i++){
    for (j=0; j<3; j++){
        scanf("%d", &scores[i][j]);
    }
}
```

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-10

Problem: Averaging

- How could we write a program to average all of the scores in our array?

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-11

2-D Arrays and Functions

- We can use 2-D arrays as parameters to functions as well
- We cannot return them from functions (just like regular arrays)

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-12

Swap Two Rows

```
void swap(int a[][NUM_TSTS], int
row1, int row2){

    int i;
    for (i=0; i<NUM_TSTS; i++)
        swap(&a[row1][i], &a[row2][i]);

    return;
}
```

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-13

Representation of Arrays

- We think:

22	22	22
50	48	49

...

16	50	3
42	29	37

- Actually:

22	22	22	50	48	49	...
----	----	----	----	----	----	-----

7. August, 2000

CSE 142 Summer 2000 — Isaac Kunen

M-14

More than 2-D

- We can make arrays with as many dimensions as we wish
- If we use them as parameters, we must always give the function each subscript *except for the first one*
 - Why? Think about the representation!
