#### **Readings and References** • Reading » Sections 13.1 through 13.3, Intro to Programming and Searching Object-Oriented Design Using Java, Niño and Hosch CSE 142, Summer 2003 **Computer Programming 1** http://www.cs.washington.edu/education/courses/142/03su/ 2 6-Aug-2003 cse142-19-search © 2003 University of Washington 6-Aug-2003 cse142-19-search © 2003 University of Washington Linear Search Searching a List • Assume that we've got a list, and some • Locate a string in a list collection of strings has been added to the list • We can do this! » how can we look at each element in turn? ArrayList names = new ArrayList( ); names.add("frog"); names.add("rabbit"); names.add("aardvark"); » how do we check if it's what we want? • Problem: Look for a name in the list » what do we do when we get it? » If found, report its position » If not found, report -1 3 6-Aug-2003 cse142-19-search © 2003 University of Washington 6-Aug-2003 cse142-19-search © 2003 University of Washington 4

Linear Search implementation	Can we do better?	
	• How much work does linear search do?	
	• Can we do it faster?	
	» No, if we don't know anything about the order of elements in the list	
	» Yes, if the list is sorted

### Binary Search – Strategy

#### String Comparisons

- We need to compare Strings to determine ordering, not just equality
  - » Can't use <, <=, etc. on objects
- Solution: method compareTo in class String
   s.compareTo(t)

negative integer if  $\mathbf{s}$  is before  $\mathbf{t}$  alphabetically zero if  $\mathbf{s}$  is equal to  $\mathbf{t}$  alphabetically positive integer if  $\mathbf{s}$  is after  $\mathbf{t}$  alphabetically

# Binary Search – Performance

- Is the extra complexity worth it?
- How much work is done to search a list of a given size?

cse142-19-search © 2003 University of Washington

• or, How big a list can be searched with *n* comparisons?

12

## Binary & Linear Search Compared

- Linear search: work ~ size
- Binary search: work ~ log<sub>2</sub> size
  - » This is a *fundamental* difference not just a constant speedup.
- Graph:
