Hi, I’m Brett! (he/him)

• Assistant Teaching Professor
• Frequent 142 instructor (7th time in last 3 years)
• Also developing/teaching CSE 492T
  • Equitable and Inclusive CS Pedagogy
• Previously:
  • trained CS teachers
  • developed CS curriculum
  • taught high school CS
  • worked as a software engineer

Learning Objectives

or, “What will I learn in this class?”

• **Functionality/Behavior:** Write functionally correct Java programs that meet a provided specification and/or solve a specified problem

• **Functional Decomposition:** Break down problems into subproblems that are modular and reusable, and define methods to represent those subproblems

• **Control Structures:** Select and apply control structures (e.g. methods, loops, conditionals) to manage the flow of control and information in programs

• **Data Abstraction:** Select and apply basic data abstractions (e.g. variables, parameters, arrays, classes) to manage and manipulate data in programs

• **Code Quality:** Define programs that are well-written, readable, maintainable, and conform to established standards
## Other Similar Courses

</thead>
</table>
| CSE 142  | • You’ve never programmed before OR  
• You’ve done a little programming but feel rusty or not confident AND  
• You are, or want to be, in a major such as CS, CE, EE, Info, etc. that requires Java programming |
| CSE 143  | • You’ve programming in Java before OR  
• You took AP CS A or IB CS in high school                                                                                                                                 |
| CSE 143X | • You’ve programmed a lot before in a language other than Java OR  
• You are confident you can pick up new concepts very quickly OR  
• You really, really need to get through two courses in one quarter                                                                                     |
| CSE 160  | • You’ve never programmed before AND  
• You’re interested in data science and analysis OR  
• You’d rather learn Python than Java* OR  
• You are, or want to be, in a major such as Physics, Bio, Stat, etc. where analyzing data through programming is useful |
Course Components

Lessons (aka Lectures)
• MWF, 10:30 or 1:30
• Held live via Zoom; recordings released after
• First introductions to course concepts
• Mix of presentation of content and practice activities/problems
• Some required pre-work

Sections
• Th, various times
• Led by TAs
• Held live via Zoom; not recorded
  • Short videos will be released on occasion when important material is covered
• Additional review, discussion, and practice
• Mostly practice problems

Attendance is not taken, but you are responsible for all material (including announcements).

Learning in CSE 142 (or anywhere)

1. **Exposure**
   - Lessons, videos, textbook
   - Encounter concepts for the first time. See examples and ask questions. Nowhere near mastery!

2. **Guided Practice**
   - Lesson activities, sections, labs
   - Practice with support from course staff. Learn by doing: make mistakes and learn from them. Start to develop mastery.

3. **Independent/Group Practice**
   - Checkpoints, section problems, additional practice
   - Practice on your own or with classmates. Continue to learn by doing. Get close to mastery.

4. **Assessment**
   - Take-home assessments
   - Build on the scaffolding from 1-3. Still learning by doing: you're not done! Demonstrate your mastery (even if it's still developing).

Course Website

**cs.uw.edu/142**

- Primary source of course information (*not* Canvas)
- Calendar will contain links to (almost) all resources
Please review the syllabus ASAP.
Make sure you’re aware of Zoom norms.
Zoom

• Keep your microphone muted until called on
• Use the “Raise Hand” button to ask to speak

• Turn video on if you’re comfortable!
  • I like seeing your faces. 😊

• Chat will usually be disabled in lessons
  • But we’ll have other options...
Ed

- Our online learning platform
- Lessons, sections, labs, assessments all here
- Intro and walkthrough video forthcoming
PollEverywhere

pollev.com/brettwo

Two purposes (at least):

• In-class activities
  • Short questions, problems, etc.
  • Usually multiple choice
  • Not graded
    • Not even on participation
PollEverywhere

pollev.com/brettwo

Two purposes (at least):

• Questions backchannel
  • Ask questions at any time
  • I’ll check periodically and respond
• Some may be deferred
  • Answers will be posted on Ed after class

Assessment and Grading

• Our goal in the course is for you to **master the concepts and skills** we teach

• We assess your mastery by asking you to apply the concepts and skills on tasks or problems

• By necessity, we are assessing your *work* as a proxy for your *mastery*

• Your final grade should reflect **the extent to which you have demonstrated mastery of the course objectives**
Assessment

• Your learning in this course will be assessed in four ways:
  • Checkpoints (~weekly)
    • Short problems to help you practice and make sure you’ve got the basics for the week
  • **Take-home assessments (~weekly)**
    • Large programming assignments to assess your full mastery of that week’s concepts (plus some previous material)
  • Culminating assessments (2/quarter)
    • Series of problems covering all material up to that point
  • Reflections (w/other assignments)
    • Written assignments to help you think critically about your learning and progress
Resubmission

Learning takes time, and doesn’t always happen on the first try

• One previous take-home assessment can be resubmitted each week
  • Initial submission must have been made by original due date
  • Must be accompanied by a write-up describing changes
  • Grade on resubmission will replace original grade

• See the syllabus for more details
Grading

*Grades should reflect your mastery of the course objectives*

- Checkpoints, culminating assessments, and reflections are graded S *(Satisfactory)* or U *(Unassessable)*
  - If you submit on time and meet all requirements, you’ll get an S
- Take-home assessments will be grade E *(Exemplary)*, S *(Satisfactory)*, N *(Not yet)*, or U *(Unassessable)* on four dimensions:
  - Behavior
  - Functional decomposition
  - Use of Language Features
  - Code Quality
- Final grades will be assigned based on the **amount of work at each level**

- See the [syllabus](#) for more details
Collaboration Policy

*Learning is hard, but it’s easier when you learn from each other*

• You are encouraged to form study groups, work together on practice and review, and discuss your ideas and approaches at a high level
• If you discuss your ideas with others, you must cite them
• All work you submit for grading must be your own
• Any work found to not be your own will receive a grade of U and may not be resubmitted
  • If it’s not your work, we can’t assess your mastery from it

• See the syllabus for more details
Amnesty

Sometimes, we make bad choices that we regret

• “If you submit work that is in violation of the academic conduct policy, you bring the action to Brett's attention within 72 hours of submission and request amnesty. If you do so, you will receive a grade of U for the initial submission, but you will be allowed to resubmit your work under the normal resubmission process.”

• See the syllabus for more details
