

# Building Java Programs

Graphics

Reading: Supplement 3G

# Objects (briefly)

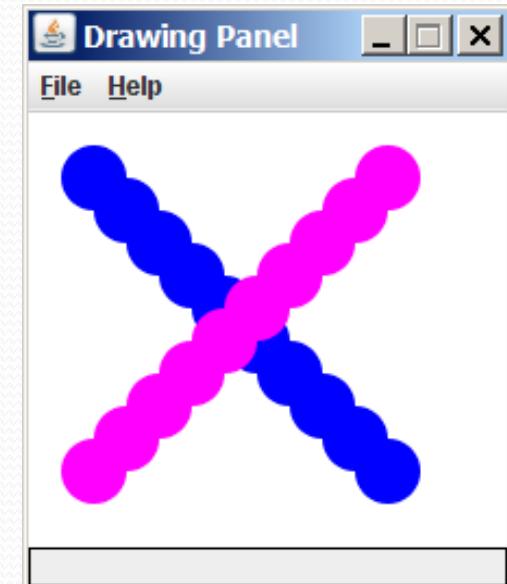

- **object:** An entity that contains data and behavior.
  - *data:* variables inside the object
  - *behavior:* methods inside the object
    - You interact with the methods; the data is hidden in the object.
    - A **class** is a *type* of objects.
- Constructing (creating) an object:  
**Type objectName = new Type(parameters);**
- Calling an object's method:  
**objectName.methodName(parameters);**

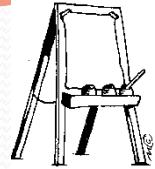

# Graphical objects

We will draw graphics in Java using 3 kinds of objects:

- DrawingPanel: A window on the screen.
  - Not part of Java; provided by the authors. See class web site.
- Graphics: A "pen" to draw shapes and lines on a window.
- Color: Colors in which to draw shapes.

# DrawingPanel

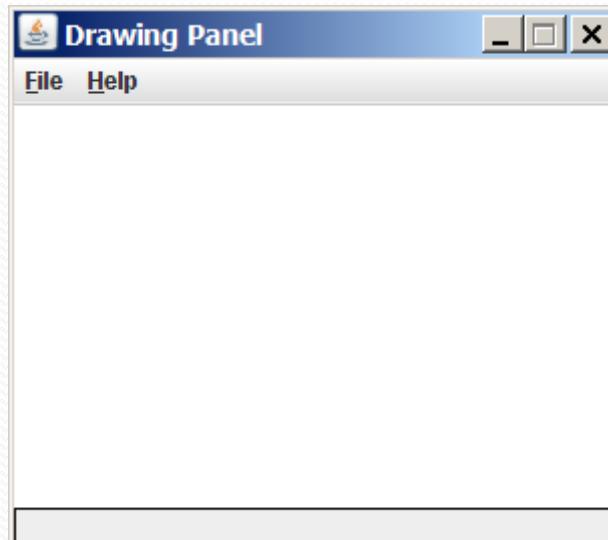

*"Canvas" objects that represents windows/drawing surfaces*

- To create a window:

```
DrawingPanel name = new DrawingPanel(width, height) ;
```

Example:

```
DrawingPanel panel = new DrawingPanel(300, 200);
```

# Graphics

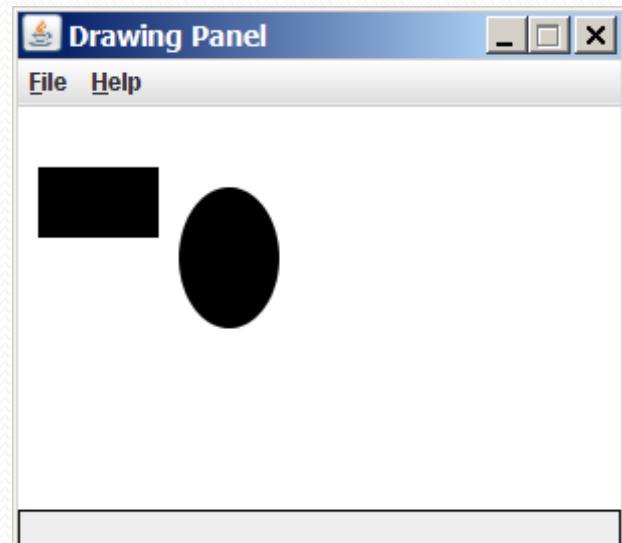

*"Pen" or "paint brush" objects to draw lines and shapes*

- Access it by calling `getGraphics` on your `DrawingPanel`.

```
Graphics g = panel.getGraphics();
```

- Draw shapes by calling methods on the `Graphics` object.

```
g.fillRect(10, 30, 60, 35);  
g.fillOval(80, 40, 50, 70);
```

# Java class libraries, import

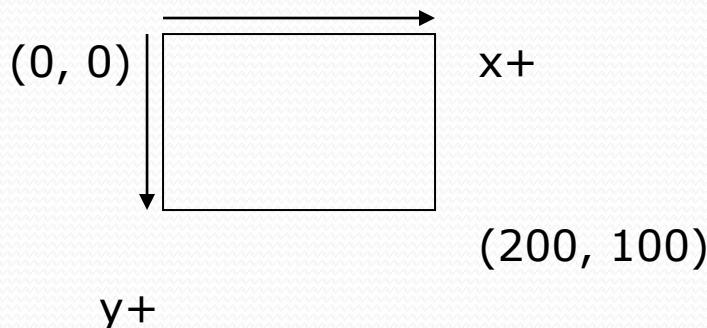

- **Java class libraries:** Classes included with the JDK (Java Development Kit).
  - organized into groups named *packages*
  - To use a package, put an *import declaration* in your program:

```
// put this at the very top of your program  
import packageName.*;
```

- Graphics belongs to a package named java.awt
  - import java.awt.\*;
  - To use Graphics, you must place the above line at the very top of your program, before the public class header.

# Coordinate system

- Each  $(x, y)$  position is a *pixel* ("picture element").
- Position  $(0, 0)$  is at the window's top-left corner.
  - $x$  increases rightward and the  $y$  increases downward.
- The rectangle from  $(0, 0)$  to  $(200, 100)$  looks like this:

# Graphics methods

Method name	Description
<code>g.drawLine(<i>x1, y1, x2, y2</i>) ;</code>	line between points $(x_1, y_1), (x_2, y_2)$
<code>g.drawOval(<i>x, y, width, height</i>) ;</code>	outline largest oval that fits in a box of size $width * height$ with top-left at $(x, y)$
<code>g.drawRect(<i>x, y, width, height</i>) ;</code>	outline of rectangle of size $width * height$ with top-left at $(x, y)$
<code>g.drawString(<i>text, x, y</i>) ;</code>	text with bottom-left at $(x, y)$
<code>g.fillOval(<i>x, y, width, height</i>) ;</code>	fill largest oval that fits in a box of size $width * height$ with top-left at $(x,y)$
<code>g.fillRect(<i>x, y, width, height</i>) ;</code>	fill rectangle of size $width * height$ with top-left at $(x, y)$
<code>g.setColor(<i>Color</i>) ;</code>	set Graphics to paint any following shapes in the given color

# Color

- Specified as predefined `Color` class constants:

`Color.CONSTANT_NAME`

where **CONSTANT\_NAME** is one of:

BLACK,	BLUE,	CYAN,	DARK_GRAY,	GRAY,
GREEN,	LIGHT_GRAY,	MAGENTA,	ORANGE,	
PINK,	RED,	WHITE,	YELLOW	

- Example:

`Color.MAGENTA`

# Making your own colors

- Create colors using Red-Green-Blue (RGB) values of 0-255

```
Color name = new Color(red, green, blue);
```

- Example:

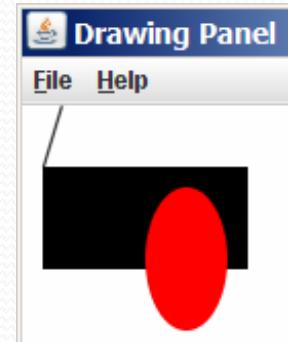

```
Color brown = new Color(192, 128, 64);
```

- List of RGB colors: <http://web.njit.edu/~kevin/rgb.txt.html>

# Using colors

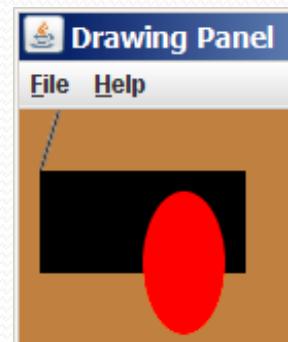

- Pass a Color to Graphics object's setColor method
  - Subsequent shapes will be drawn in the new color.

```
g.setColor(Color.BLACK);  
g.fillRect(10, 30, 100, 50);  
g.drawLine(20, 0, 10, 30);  
g.setColor(Color.RED);  
g.fillOval(60, 40, 40, 70);
```

- Pass a color to DrawingPanel's setBackground method
  - The overall window background color will change.

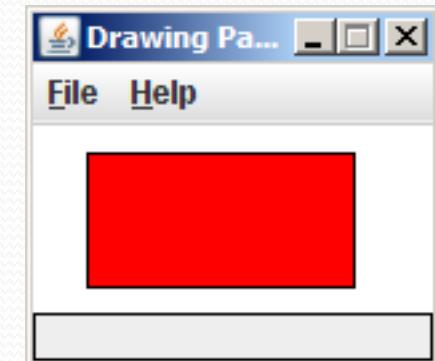

```
Color brown = new Color(192, 128, 64);  
panel.setBackground(brown);
```

# Outlined shapes

- To draw a colored shape with an outline, first *fill* it, then *draw* the same shape in the outline color.

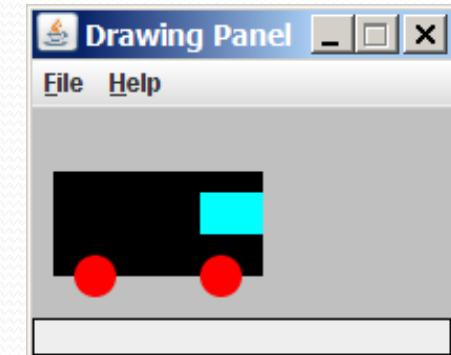

```
import java.awt.*; // so I can use Graphics
public class OutlineExample {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(150, 70);
        Graphics g = panel.getGraphics();
        // inner red fill
        g.setColor(Color.RED);
        g.fillRect(20, 10, 100, 50);
        // black outline
        g.setColor(Color.BLACK);
        g.drawRect(20, 10, 100, 50);
    }
}
```

# Superimposing shapes

- When  $\geq 2$  shapes occupy the same pixels, the last drawn "wins."

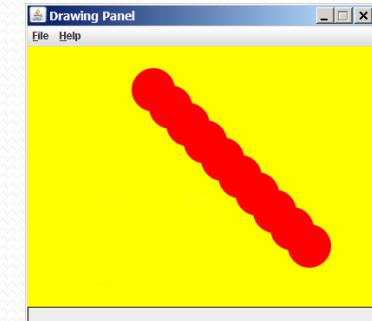

```
import java.awt.*;  
  
public class Car {  
    public static void main(String[] args) {  
        DrawingPanel panel = new DrawingPanel(200, 100);  
        panel.setBackground(Color.LIGHT_GRAY);  
        Graphics g = panel.getGraphics();  
  
        // car body  
        g.setColor(Color.BLACK);  
        g.fillRect(10, 30, 100, 50);  
  
        // wheels  
        g.setColor(Color.RED);  
        g.fillOval(20, 70, 20, 20);  
        g.fillOval(80, 70, 20, 20);  
  
        // window  
        g.setColor(Color.CYAN);  
        g.fillRect(80, 40, 30, 20);  
    }  
}
```

# Drawing with loops

- The  $x,y,w,h$  expressions can use the loop counter variable:

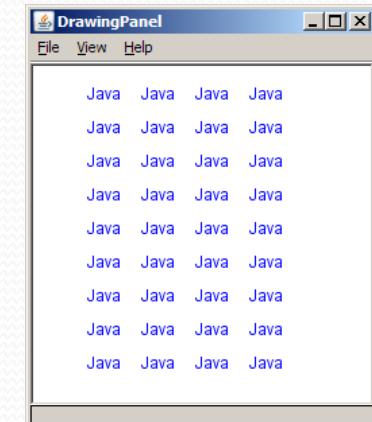

```
panel.setBackground(Color.YELLOW);
g.setColor(Color.RED);
for (int i = 1; i <= 10; i++) {
    // x y w h
    g.fillOval(100 + 20 * i, 5 + 20 * i, 50, 50);
}
```

- Nested loops can be used with graphics:

```
g.setColor(Color.BLUE);

for (int x = 1; x <= 4; x++) {
    for (int y = 1; y <= 9; y++) {
        g.drawString("Java", x * 40, y * 25);
    }
}
```

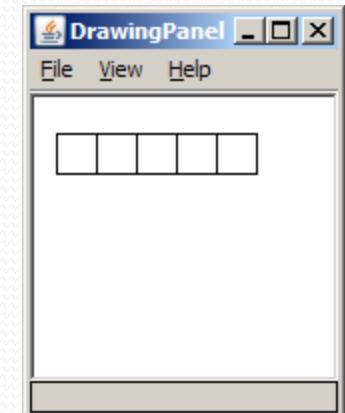

# Zero-based loops

- Beginning at 0 and using < can make coordinates easier.

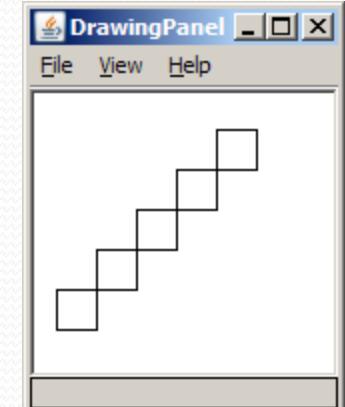

```
DrawingPanel panel = new DrawingPanel(150, 140);
Graphics g = panel.getGraphics();

// horizontal line of 5 20x20 rectangles starting
// at (11, 18); x increases by 20 each time
for (int i = 0; i < 5; i++) {
    g.drawRect(11 + 20 * i, 18, 20, 20);
}
```

- Exercise: Write a variation of the above program that draws the output at right.
  - The bottom-left rectangle is at (11, 98).

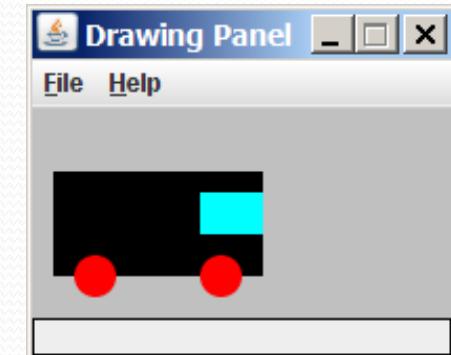

```
for (int i = 0; i < 5; i++) {
    g.drawRect(11 + 20 * i, 98 - 20 * i, 20, 20);
}
```

# Animation exercise

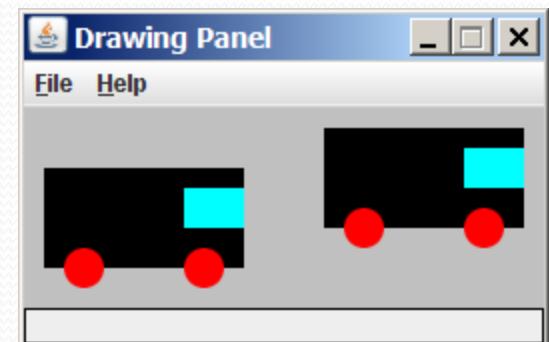

- Modify the following program to draw a "moving" car.

```
import java.awt.*;  
  
public class Car {  
    public static void main(String[] args) {  
        DrawingPanel panel = new DrawingPanel(200, 100);  
        panel.setBackground(Color.LIGHT_GRAY);  
        Graphics g = panel.getGraphics();  
  
        // car body  
        g.setColor(Color.BLACK);  
        g.fillRect(10, 30, 100, 50);  
  
        // wheels  
        g.setColor(Color.RED);  
        g.fillOval(20, 70, 20, 20);  
        g.fillOval(80, 70, 20, 20);  
  
        // window  
        g.setColor(Color.CYAN);  
        g.fillRect(80, 40, 30, 20);  
    }  
}
```

# Parameterized figures

- Modify the car-drawing method so that it can draw cars at different positions, as in the following image.
  - Top-left corners: (10, 30), (150, 10)
  - Increase the drawing panel's size to 260x100 to fit.

# Drawing with parameters

- To draw in a method, you must pass the `Graphics` object to the method.
  - Otherwise, `g` is out of scope and cannot be used!

- syntax (declaration):

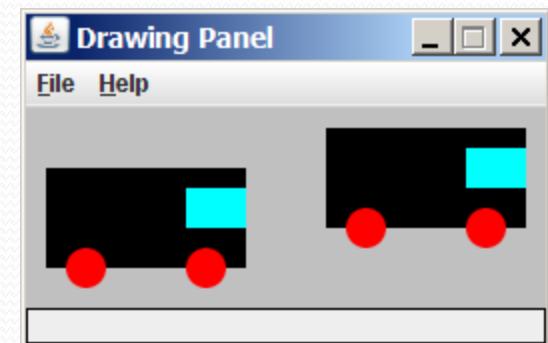

```
public static void name(Graphics g, parameters) {  
    statement(s);  
}
```

- syntax (call):

```
name(g, values);
```

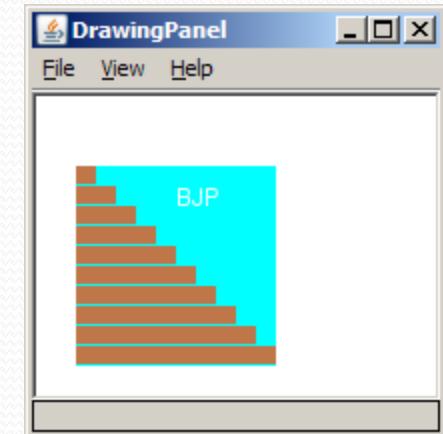

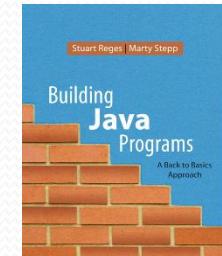

# Parameterized answer

```
import java.awt.*;  
  
public class Car3 {  
    public static void main(String[] args) {  
        DrawingPanel panel = new DrawingPanel(260, 100);  
        panel.setBackground(Color.LIGHT_GRAY);  
        Graphics g = panel.getGraphics();  
        drawCar(g, 10, 30);  
        drawCar(g, 150, 10);  
    }  
  
    public static void drawCar(Graphics g, int x, int y) {  
        g.setColor(Color.BLACK);  
        g.fillRect(x, y, 100, 50);  
        g.setColor(Color.RED);  
        g.fillOval(x + 10, y + 40, 20, 20);  
        g.fillOval(x + 70, y + 40, 20, 20);  
        g.setColor(Color.CYAN);  
        g.fillRect(x + 70, y + 10, 30, 20);  
    }  
}
```

# Java book figure

- Write a program that draws the following figure:
  - drawing panel is size 200x150
  - book is at (20, 35), size 100x100
  - cyan background
  - white "BJP" text at position (70, 55)
  - stairs are (red=191, green=118, blue=73)
  - each stair is 9px tall
    - 1st stair is 10px wide
    - 2nd stair is 20px wide ...
  - stairs are 10px apart (1 blank pixel between)

# Java book solution

```
// Draws a Building Java Programs textbook with DrawingPanel.
import java.awt.*;

public class Book {
    public static void main(String[] args) {
        DrawingPanel panel = new DrawingPanel(200, 150);
        panel.setBackground(Color.WHITE);
        Graphics g = panel.getGraphics();

        g.setColor(Color.CYAN);                      // cyan background
        g.fillRect(20, 35, 100, 100);

        g.setColor(Color.WHITE);                     // white "bjp" text
        g.drawString("BJP", 70, 55);

        g.setColor(new Color(191, 118, 73));        // orange "bricks"
        for (int i = 0; i < 10; i++) {             // orange "bricks"
            g.fillRect(20, 35 + 10 * i, 10 + 10 * i, 9);
        }
    }
}
```

# Multiple Java books

- Modify the Java book program so that it can draw books at different *positions* as shown below.
  - book top/left positions: (20, 35), (150, 70), (300, 10)
  - drawing panel's new size: 450x180

# Multiple books solution

```
// Draws many BJP textbooks using parameters.  
import java.awt.*;  
  
public class Book2 {  
    public static void main(String[] args) {  
        DrawingPanel panel = new DrawingPanel(450, 180);  
        panel.setBackground(Color.WHITE);  
        Graphics g = panel.getGraphics();  
  
        // draw three books at different locations  
        drawBook(g, 20, 35);  
        drawBook(g, 150, 70);  
        drawBook(g, 300, 10);  
    }  
  
    ...
```

# Multiple books, cont'd.

...

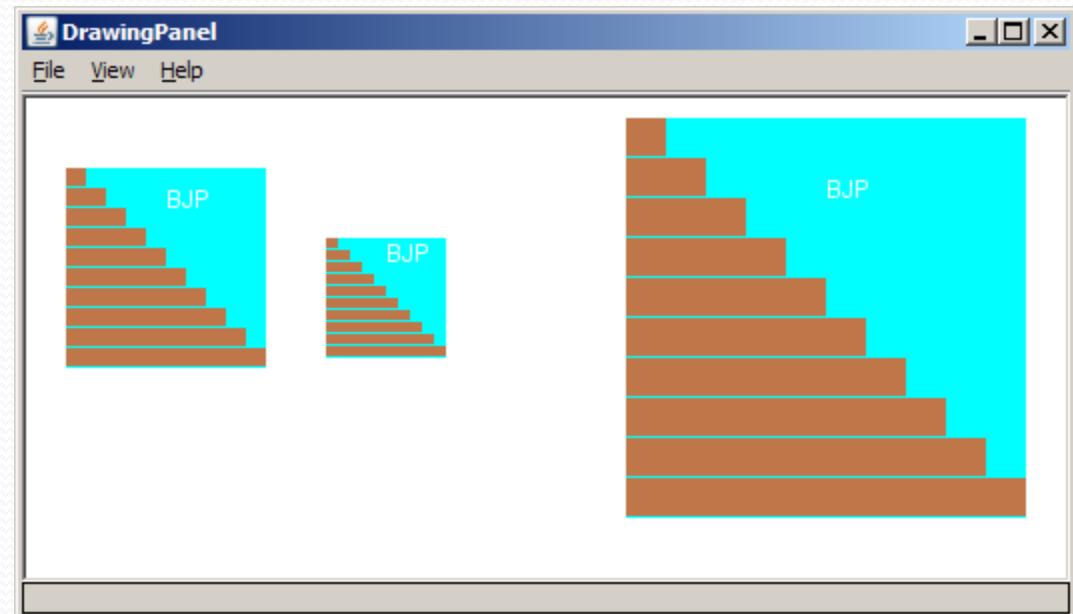

```
// Draws a BJP textbook at the given x/y position.
public static void drawBook(Graphics g, int x, int y) {
    g.setColor(Color.CYAN);                      // cyan background
    g.fillRect(x, y, 100, 100);

    g.setColor(Color.WHITE);                     // white "bjp" text
    g.drawString("BJP", x + 50, y + 20);

    g.setColor(new Color(191, 118, 73));        // orange "bricks"
    for (int i = 0; i < 10; i++) {               // orange "bricks"
        g.fillRect(x, y + 10 * i, 10 * (i + 1), 9);
    }
}
```

# Resizable Java books

- Modify the Java book program so that it can draw books at different *sizes* as shown below.
  - book sizes: 100x100, 60x60, 200x200
  - drawing panel's new size: 520x240

# Resizable books solution

```
// Draws many sized BJP textbooks using parameters.  
import java.awt.*;  
  
public class Book3 {  
    public static void main(String[] args) {  
        DrawingPanel panel = new DrawingPanel(520, 240);  
        panel.setBackground(Color.WHITE);  
        Graphics g = panel.getGraphics();  
  
        // draw three books at different locations/sizes  
        drawBook(g, 20, 35, 100);  
        drawBook(g, 150, 70, 60);  
        drawBook(g, 300, 10, 200);  
    }  
  
    ...
```

# Resizable solution, cont'd.

...

```
// Draws a book of the given size at the given position.
public static void drawBook(Graphics g, int x, int y, int size) {
    g.setColor(Color.CYAN);                                // cyan background
    g.fillRect(x, y, size, size);

    g.setColor(Color.WHITE);                               // white "bjp" text
    g.drawString("BJP", x + size/2, y + size/5);

    g.setColor(new Color(191, 118, 73));                // orange "bricks"
    for (int i = 0; i < 10; i++) {                      // orange "bricks"
        g.fillRect(x,                                         // x
                    y + size/10 * i,                         // y
                    size/10 * (i + 1),                         // width
                    size/10 - 1);                            // height
    }
}
```

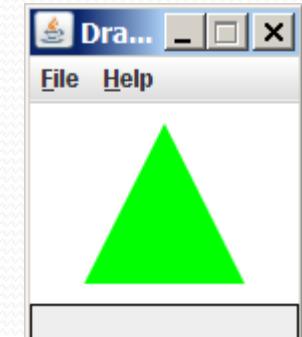

# Polygon

*Objects that represent arbitrary shapes*

- Add points to a Polygon using its addPoint(<x>, <y>) method.
- Example:

```
DrawingPanel p = new DrawingPanel(100, 100);  
Graphics g = p.getGraphics();  
g.setColor(Color.GREEN);
```

```
Polygon poly = new Polygon();  
poly.addPoint(10, 90);  
poly.addPoint(50, 10);  
poly.addPoint(90, 90);  
g.fillPolygon(poly);
```

# DrawingPanel methods

- **panel.clear();**  
Erases any shapes that are drawn on the drawing panel.
- **panel.setWidth(width);**  
**panel.setHeight(height);**  
**panel.setSize(width, height);**  
Changes the drawing panel's size to the given value(s).
- **panel.save(filename);**  
Saves the image on the panel to the given file (String).
- **panel.sleep(milliseconds);**  
Pauses the drawing for the given number of milliseconds.

# Animation with sleep

- DrawingPanel's sleep method pauses your program for a given number of milliseconds.
- You can use sleep to create simple animations.

```
DrawingPanel panel = new DrawingPanel(250, 200);
Graphics g = panel.getGraphics();

g.setColor(Color.BLUE);
for (int i = 1; i <= 10; i++) {
    g.fillOval(15 * i, 15 * i, 30, 30);
    panel.sleep(500);
}
```

- Try adding sleep commands to loops in past exercises in this chapter and watch the panel draw itself piece by piece.

# Animation exercise

- Modify the previous program to draw a "moving" animated car.
