CSE142 Lecture Questions for Wednesday, 2/27/21, section B

Time (e.g., 12:45)	Question	Answer
	I keep getting an error stating that Math.round cannot be found. Is there a package I need to import to be able to use this?	You probably have a file called Math.java in the same folder that is preventing it from finding the built-in class called Math.
	When the test for an else-if statement is true, it skips the other else-if's and else's right?	In the second and third nested structures that I showed, the answer to your question is yes...they are structured in such a way that once a test evaluates to true, then it skips everything else after executing the corresponding statements for that test.
	Should all nested if's end in else? Okay thank you.	No. That was the third case where you know you want to execute exactly one. The other two variations don't end in else.
