CSE142 Lecture Questions for Friday, 2/5/21, section A

Time (e.g., 12:45)	Question	Answer
	I'm still confused a little about the midterm. We are taking the midterm on our own time… then when we are done we just go over it with our TA	There will be a link for you to upload your completed exam. You will scan it, upload it, and then meet with your TA to discuss it.
	Where can i find the file to print the assertion problems to follow along with in lecture Oh ok thank you! I must have skipped over it when looking	https://courses.cs.washington.edu/courses/cse142/21wi/handouts/07.pdf (linked from the main class web page under announcements, "handout for assertions lecture")
	Is there a word doc or pdf version of the midterm that we can submit instead of printing the midterm out? Okay, i'll try writing on another paper thank you!	The exam will be in pdf format. You are encouraged to print it, but not required to. You could instead write your answers on separate pages and then scan and upload those.
	So if the midterm is timed does that mean we need to upload our midterm within that time frame or after we talk it over with our TA. Ok, thanks and it is due on 2/15?	You should limit yourself to 75 minutes to complete the exam, but there is a week in which you can find the time to do that. You will turn in the exam first and then meet with your TA. Yes, due on 2/15.
	Follow up on the midterm format: If i were to write my answers on another piece of paper, do i have to rewrite the question? Or is the answer with additional work shown fine?	The answer alone would be fine.
	Can you briefly explain the if and while relationship. Oh ok	I don't know what you're asking. I do that in the lecture in detail, talking about what you can conclude at different points in execution.
	So is the midterm out of 100 points?	Yes, the midterm is based on 100 points when we grade the individual questions. For this quarter, the midterm task is worth 10 points.
