

CSE142 Lecture Questions for Friday, 2/19/21, section A

Time (e.g., 12:45)	Question	Answer
	Homework 6 question. As the assignment mentioned, how long is overly too long? thanks.	We don't specify an exact number. We expect you to be developing your own ability to judge this.
	wait . why did you copy paste that for loop for the temperature? Was it to just show why you put in temps[i]=console.nextInt()? !oh i didn't see you made the switch! I thought you commented the stuff you pasted. My bad! Hence the confusion	I first wrote the second counting loop using the standard array traversal pattern. Then I copied the for loop header from that loop and replaced the first loop with that header instead. No problem...understandable.
	Are the homework scores usually so far shifted to the right?	Yes...half the class does very well...the other half are spread out more.
