Hi, I’m Brett! (he/him)

- Assistant Teaching Professor
- Frequent 14X instructor
- Also interested in CS education/pedagogy
- Previously:
  - trained CS teachers
  - developed CS curriculum
  - taught high school CS
  - worked as a software engineer
Meet your TAs

Learning Objectives

or, “What will I learn in this class?”

1. **Functionality/Behavior:** Write functionally correct and efficient Java programs and systems of medium to large length and complexity that meet a provided specification and/or solve a specified problem

2. **Comprehension:** Trace and predict the behavior of programs and systems

3. **Data Abstraction:** Select and apply appropriate abstract data types to manage program state

4. **Data Structures:** Design, implement, and modify data structures to efficiently and effectively provide a defined set of operations

5. **Functional Abstraction:** Document, maintain, and utilize appropriate abstractions between the implementer and client of a library

6. **Decomposition:** Solve problems by breaking them into subproblems and recombining the solutions using techniques such as methods, inheritance, and recursion

7. **Code Quality:** Define programs that are well-written, readable, maintainable, and conform to established standards
Comparison to CSE 142 (or similar)

CSE 142
- Control structures
- Simple (primitive) data
- Client view
- Java as focus
- How do I do this?

CSE 143
- Data structures
- Complex data
- Implementer view
- Java as example
- What can I do with this?

Course Components

**Lessons (aka Lectures)**
- MWF, 12:30 or 2:30
- Held live via Zoom; recordings released after
- First introductions to course concepts
- Mix of presentation of content and practice activities/problems
- Some required pre-work

**Sections**
- TTh, various times
- Led by TAs
- Held live via Zoom; *not* recorded
  - Short videos will be released on occasion when important material is covered
- Additional review, discussion, and practice
- Mostly practice problems

*Attendance is not taken, but you are responsible for all material (including announcements).*

Learning in CSE 143 (or anywhere)

1. Exposure
   - Lessons, readings, textbook
   - Encounter concepts for the first time. See examples and ask questions. Nowhere near mastery!

2. Guided Practice
   - Lesson activities, sections
   - Practice with support from course staff. Learn by doing; make mistakes and learn from them. Start to develop mastery.

3. Independent/Group Practice
   - Checkpoints, section problems, additional practice
   - Practice on your own or with classmates. Continue to learn by doing. Get close to mastery.

4. Assessment
   - Take-home assessments
   - Build on the scaffolding from 1-3. Still learning by doing; you're not done! Demonstrate your mastery (even if it's still developing).

Course Website

cs.uw.edu/143

- Primary source of course information (not Canvas)
- Calendar will contain links to (almost) all resources
Course Website

Please review the syllabus ASAP.
Make sure you’re aware of Zoom norms.
Zoom

• Keep your microphone muted until called on
• Use the “Raise Hand” button to ask to speak

• Turn video on if you’re comfortable!
  • I like seeing your faces. 😊

• Chat will usually be disabled in lessons
  • But we’ll have other options…
Ed

- Our online learning platform
- Lessons, sections, labs, assessments all here
- Intro and walkthrough video forthcoming
Poll Everywhere

pollев.com/brettwo

Two purposes (at least):

• Questions backchannel
  • Ask questions at any time
  • I’ll check periodically and respond
  • Some may be deferred
    • Answers will be posted on Ed after class
PollEverywhere

pollev.com/brettwo

Two purposes (at least):

• In-class activities
  • Short questions, problems, etc.
  • Usually multiple choice
  • Not graded
    • Not even on participation

Assessment and Grading

• Our goal in the course is for you to **master the concepts and skills** we teach
• We assess your mastery by asking you to apply the concepts and skills on tasks or problems
• By necessity, we are assessing your *work* as a proxy for your *mastery*
• Your final grade should reflect **the extent to which you have demonstrated mastery of the course objectives**
Assessment

• Your learning in this course will be assessed in four ways:
  • Take-home assessments (~weekly, 8 total)
    • Large programming assignments to assess your full mastery of that week’s concepts (plus some previous material)
  • Checkpoints (~weekly, 9-10 total)
    • Short problems to help you practice and make sure you’ve got the basics for the week
  • Culminating assessments (2 total)
    • Series of problems covering all material up to that point
  • Reflections (w/other assignments, 8-10 total)
    • Written assignments to help you think critically about your learning and progress
Resubmission

Learning takes time, and doesn’t always happen on the first try

• One previous take-home assessment can be resubmitted each week
  • Initial submission must have been made by original due date and passed verification tests
  • Must be accompanied by a write-up describing changes
  • Grade on resubmission will completely replace original grade

• See the syllabus for more details
Grading

*Grades should reflect your mastery of the course objectives*

- Checkpoints, culminating assessments, and reflections are graded *S (Satisfactory)* or *N (Not yet)*
  - If you submit on time and meet all requirements, you’ll get an *S*
- Take-home assessments will be grade *E (Exemplary)*, *S (Satisfactory)*, *N (Not yet)*, or *U (Unassessable)* on four dimensions.
  - Specifics forthcoming
- Final grades will be assigned based on the **amount of work at each level**

- See the [syllabus](#) for more details
Collaboration Policy

*Learning is hard, but it’s easier when you learn from each other*

- You are encouraged to form study groups, work together on practice and review, and discuss your ideas and approaches **at a high level**
- If you discuss your ideas with others, you must **cite them**
- All work you submit for grading **must be your own**
- Any work found to not be your own will receive a grade of **U on all dimensions and may not be resubmitted**
  - If it’s not your work, we can’t assess your mastery from it

- See the [syllabus](#) for more details
Amnesty

*Sometimes, we make bad choices that we regret*

• “If you submit work that is in violation of the academic conduct policy, you bring the action to Brett's attention within 72 hours of submission and request amnesty. If you do so, you will receive a grade of U for the initial submission, but you **will be allowed to resubmit your work under the normal resubmission process.**”

• See the [syllabus](#) for more details
