

CSE143X—Computer Programming I & II

Programming Assignment #1

due: Monday, 10/5/20, 11 pm

Your first program will require the use of static methods and `println` statements. This assignment is worth 10 points instead of the normal 20 points. You are going to write a Java program that produces as output a *cumulative song* in which successive verses build on previous verses (as described in http://en.wikipedia.org/wiki/Cumulative_song). Your program should produce as output the following song:

```
There was an old woman who swallowed a fly.  
I don't know why she swallowed that fly,  
Perhaps she'll die.
```

```
There was an old woman who swallowed a spider,  
That wriggled and iggled and jiggled inside her.  
She swallowed the spider to catch the fly,  
I don't know why she swallowed that fly,  
Perhaps she'll die.
```

```
There was an old woman who swallowed a bird,  
How absurd to swallow a bird.  
She swallowed the bird to catch the spider,  
She swallowed the spider to catch the fly,  
I don't know why she swallowed that fly,  
Perhaps she'll die.
```

```
There was an old woman who swallowed a cat,  
Imagine that to swallow a cat.  
She swallowed the cat to catch the bird,  
She swallowed the bird to catch the spider,  
She swallowed the spider to catch the fly,  
I don't know why she swallowed that fly,  
Perhaps she'll die.
```

```
There was an old woman who swallowed a dog,  
What a hog to swallow a dog.  
She swallowed the dog to catch the cat,  
She swallowed the cat to catch the bird,  
She swallowed the bird to catch the spider,  
She swallowed the spider to catch the fly,  
I don't know why she swallowed that fly,  
Perhaps she'll die.
```

<< *Your custom sixth verse goes here* >>

```
There was an old woman who swallowed a horse,  
She died of course.
```

As indicated above, you should include a custom sixth verse that matches the pattern of the first five verses. You must exactly reproduce the format of this output.

Most of our assignments will have a creative aspect where you have more flexibility than normal to come up with your own solution. For this assignment, it involves writing a sixth verse that fits the

pattern of the first five. For example, some versions of the song have a sixth verse for swallowing a goat (“Just opened her throat to swallow a goat”). Notice that the first two lines should either end in the same word (fly/fly, bird/bird, cat/cat, etc) or should end with rhyming words (spider/inside her). You are not allowed to simply copy one of the previous animals or to use the verses you’ll find on the web (e.g., goat and cow). You have to write your own verse. The text of the verse should not include hateful, offensive, or otherwise inappropriate speech.

You are to make use of static methods to avoid the “simple” redundancy. In particular, you are to make sure that you use only one `println` statement for each distinct line of the song. For example, this line:

```
Perhaps she'll die.
```

appears several times in the output. You are to have only one `println` statement in your program for producing this line. The more complex redundancy has to do with pairs of lines like these:

```
There was an old woman who swallowed a horse,  
There was an old woman who swallowed a dog,
```

and like these:

```
She swallowed the dog to eat the cat,  
She swallowed the cat to eat the bird,
```

It is not possible to avoid this redundancy using just methods and simple `println` statements, so you are not expected to do so. There is, however, a structural redundancy that you can eliminate with static methods and this will be worth a point. The key question to ask yourself is whether or not you have repeated lines of code that could be eliminated if you structured your static methods differently.

You should also use static methods to capture the structure of the song. You must have a different method for each of the seven verses (verses are separated by blank lines in the output). As a result, you will not have any `println` statements in main except perhaps a `println` that produces a blank line. Main will have exactly seven method calls to produce the seven verses, although you will have more than seven methods in the class.

You are not allowed to use more advanced features than what we have covered in class. For this assignment, you should limit yourself to the Java features covered in chapter 1 of the text. You should not use `System.out.print` statements or the `\n` escape sequence even though they are covered in chapter 1.

You should include a comment at the beginning of your program with some basic information and a description of the program, as in:

```
// Stuart Reges  
// 10/3/20  
// CSE143X  
// TA: Andrew Yang  
// Assignment #1  
//  
// This program will...
```

You should name your file `Song.java` and you should turn it in electronically from the “homework” link on the class web page.
