CSE 154: Web Programming   Autumn 2017

Section 2: JavaScript   **Due Date:** Tuesday, October 10

Directions: Solve the following problem on paper (or solve on the computer and print out your solution) and bring it to your section on Tuesday. You may also find this site helpful to check your work (it checks your solution against provided tests).

Note: You will still get credit if your solution isn't correct, but give it your best try and ask on Piazza if you have any questions about getting started.

0. `vowelCount`

Write a JavaScript function name `vowelCount` that accepts a `string` and returns the number of vowels it contains.

For example, the call of `vowelCount("kookaburra")` should return 5 (two o's, two a's, and one u). If passed a `string` without any vowels (such as an empty `string`, "01234", or "sky"), 0 should be returned.
