

CSE 160 23au Midterm Exam Cheat Sheet

```
# if/elif/else syntax          # for loop syntax
if condition1:               for i in sequence:
    # statements              # statements
elif condition2:             # function definition syntax
    # other statements        def function_name(param1, param2, ...)
else:                         # function body
    # more statements
```

| Function | Description |
|--|---|
| <code>range([start,] stop [, step])</code> | Returns a sequence of numbers from <code>start</code> (inclusive) to <code>stop</code> (exclusive) incremented by <code>step</code> |
| <code>len(lst)</code> | Returns the number of elements in <code>lst</code> |

Lists

| Function | Description |
|------------------------------------|--|
| <code>lst = []</code> | Creates an empty list |
| <code>lst[idx]</code> | Returns the element in <code>lst</code> at index <code>idx</code> |
| <code>lst[start:end]</code> | Returns a sublist of <code>lst</code> from index <code>start</code> (inclusive) to index <code>end</code> (exclusive) |
| <code>lst[start:end:step]</code> | Returns a sublist of <code>lst</code> from index <code>start</code> (inclusive) to index <code>end</code> (exclusive), incrementing by <code>step</code> |
| <code>lst.append(elmt)</code> | Adds the element <code>elmt</code> to the end of <code>lst</code> . Returns None |
| <code>lst.extend(L)</code> | Extends <code>lst</code> by appending all elements in list <code>L</code> to end of <code>lst</code> . Returns None |
| <code>lst.insert(idx, elmt)</code> | Inserts an element <code>elmt</code> in <code>lst</code> at index <code>idx</code> . Returns None |
| <code>lst.index(elmt)</code> | Returns index of the first occurrence of <code>elmt</code> in <code>lst</code> , Error if <code>elmt</code> is not in <code>lst</code> |
| <code>lst.count(elmt)</code> | Returns the number of times <code>elmt</code> occurs in <code>lst</code> |
| <code>lst.remove(elmt)</code> | Removes first occurrence of <code>elmt</code> from <code>lst</code> , Error if <code>elmt</code> is not in <code>lst</code> . Returns None |
| <code>lst.pop([idx])</code> | Removes and returns the element at index <code>idx</code> (or last element if no parameter is specified) in <code>lst</code> |

File I/O

| Function | Description |
|---|--|
| <code>my_file = open(file_path)</code> | Opens file at given <code>file_path</code> for reading |
| <code>my_file = open(file_path, "w")</code> | Opens file at given <code>file_path</code> for writing |
| <code>my_file.close()</code> | Closes file <code>my_file</code> |

```
# Process one line at a time          # Process entire file at once
for line of text in my_file:         all_data_as_big_string = my_file.read()
    # process line_of_text
```

Dictionaries

| Function | Description |
|-------------------------------|--|
| <code>my_dict = {}</code> | Creates a new dictionary |
| <code>my_dict[key]</code> | Returns the value associated with the given <code>key</code> in <code>my_dict</code> |
| <code>my_dict.keys()</code> | Returns sequence of keys in <code>my_dict</code> |
| <code>my_dict.values()</code> | Returns sequence of values in <code>my_dict</code> |

Sorting

| Function | Description |
|---|---|
| <code>sorted(collection [,key=sort_key, reverse=bool_val])</code> | Returns a sorted copy of <code>collection</code> , based on optional sort key <code>sort_key</code> and optional sort preference <code>reverse</code> |
| <code>lst.sort([key=sort_key, reverse=bool_val])</code> | Sorts <code>lst</code> in-place, based on optional sort key <code>sort_key</code> and optional sort preference <code>reverse</code> . Returns None |

Common Error Names

- `IndexError` - Index out of range
- `KeyError` - Key not found in dictionary
- `IndentationError` - Invalid indentation
- `TypeError` - Operation applied to invalid combination of types
- `ValueError` - Function gets properly typed argument, but invalid value
- `SyntaxError` - Invalid Python syntax
- `NameError` - Variable name not found
- `FloatingPointError` - Floating point operation fails
- `RuntimeError` - Otherwise unknown error
