## Definition of Relations

Let A and B be sets,  
A **binary relation from A to B** is a subset of  $A \times B$

Let A be a set,  
A **binary relation on A** is a subset of  $A \times A$

## Relation Examples

$$R_1 = \{(a, 1), (a, 2), (b, 1), (b, 3), (c, 3)\}$$

$$R_2 = \{(x, y) \mid x \equiv y \pmod{5}\}$$

$$R_3 = \{(c_1, c_2) \mid c_1 \text{ is a prerequisite of } c_2\}$$

$$R_4 = \{(s, c) \mid \text{student } s \text{ had taken course } c\}$$

## Properties of Relations

Let R be a relation on A

R is **reflexive** iff  $(a, a) \in R$  for every  $a \in A$

R is **symmetric** iff  $(a, b) \in R$  implies  $(b, a) \in R$

R is **antisymmetric** iff  $(a, b) \in R$  and  $a \neq b$  implies  $(b, a) \notin R$

R is **transitive** iff  $(a, b) \in R$  and  $(b, c) \in R$  implies  $(a, c) \in R$

## Combining Relations

Let R be a relation from A to B

Let S be a relation from B to C

The composite of R and S,  $S \circ R$  is the relation from A to C defined

$$S \circ R = \{(a, c) \mid \exists b \text{ such that } (a, b) \in R \text{ and } (b, c) \in S\}$$

## Examples

$(a,b) \in \text{Parent}$ : b is a parent of a

$(a,b) \in \text{Sister}$ : b is a sister of a

What is Parent  $\circ$  Sister?

What is Sister  $\circ$  Parent?

$$S \circ R = \{(a, c) \mid \exists b \text{ such that } (a,b) \in R \text{ and } (b,c) \in S\}$$

## Examples

Using the relations: Parent, Child, Brother, Sister, Sibling, Father, Mother express

Uncle: b is an uncle of a

Cousin: b is a cousin of a

## Powers of a Relation

$$R^2 = R \circ R = \{(a, c) \mid \exists b \text{ such that } (a,b) \in R \text{ and } (b,c) \in R\}$$

$$R^0 = \{(a,a) \mid a \in A\}$$

$$R^1 = R$$

$$R^{n+1} = R^n \circ R$$

How is  related to  ?

How is  related to  ?

## n-ary relations

Let  $A_1, A_2, \dots, A_n$  be sets. An n-ary relation on these sets is a subset of  $A_1 \times A_2 \times \dots \times A_n$ .
