Autumn 2015

Lecture 1: Propositional Logic

Overload Request Link:

http://tinyurl.com/p5vs5xb

We will study the **theory** needed for CSE.

Logic:

How can we describe ideas and arguments precisely?

Formal proofs:

Can we prove that we're right? [to ourselves? to others?]

Number theory:

How do we keep data **secure**? [really? we need to justify numbers?]

Relations/Relational Algebra:

How do we store information?

How do we reason about the effects of connectivity?

Finite state machines:

How do we design hardware and software?

Turing machines:

What is computation?

[the universe? superheroes?]

Are there problems computers can't solve?

The computational perspective.

Example: Sudoku

Given one, solve by hand.

Given *most*, solve with a program.

Given any, solve with computer science.

4		-			3	8	3	
	8		ì		4			2
7		6		8		3		
ž					7		.5	
2	7		5				1	9
	3		9	4				Ġ
		8		9		7		5
3			倉		6		0	
	4	5	7					3

- Tools for reasoning about difficult problems
- Tools for communicating ideas, methods, objectives
- Fundamental structures for computer science

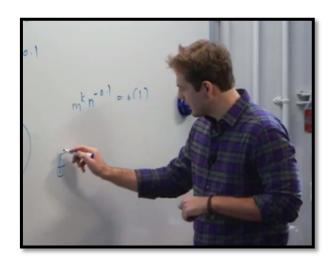

[like, uhh, smart stuff]

Prof. Oveis Gharan CSE 636

Section A MWF 9:30-10:20 in CMU 120 Office hours MW 10:30-11:30

Prof. Lee CSE 640

Section B MWF 1:30-2:20 in MGH 241 Office hours MW 2:30-3:30

We will each sometimes teach both sections.

The person who teaches is the one holding office hours after class.

You can go to any office hours any time.

Teaching assistants:

[office hours TBD soon]

Sam Castle Jiechen Chen

Rebecca Leslie Evan McCarty

Tim Oleskiw Spencer Peters

Robert Weber Ian Zhu

Quiz Sections:

Thursdays

(Optional) **Book**:

Rosen

Discrete Mathematics

6th or 7th edition

Can buy online for ~\$50

Homework:

Due Fridays on Gradescope

Write up individually

First homework out this Friday (Oct 2)

Exams:

Midterm: Monday, Nov. 9, in class

Final: Monday, Dec. 14

Grading (roughly):

50% homework

35% final exam

15% midterm

All course information at http://www.cs.washington.edu/311.

CSE 311: Foundations of Computing I

Autumn, 2015

James R. Lee

Section B: MWF 1:30-2:20, MGH 241 Office hours: MW 2:30-3:30, CSE 640

Shayan Oveis Gharan

Section A: MWF 9:30-10:20, CMU 120 Office hours: MW 10:30-11:30, CSE 636

Email and discussion:

Class email list: multi_cse311a_au15 [archives]

Please send any e-mail about the course to cse311-staff@cs.

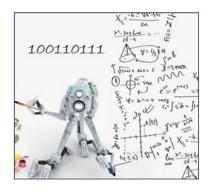

Discussion board (moderated by TBA)

Use this board to discuss the content of the course. That includes everything except the solutions to current homework problems. Feel free to discuss homeworks and exams from past incarnations of the course, and any confusion over topics discussed in class. It is also acceptable to ask for clarifications about the statement of homework problems, but not about their solutions.

Taythook:

There is no required text for the course. Some lectures will have associated reading material linked below. Over the first 6 weeks or so, the following textbook can be a useful companion: Rosen, Discrete Mathematics and Its Applications. McGraw-Hill.

(The 6th or 7th editions of the text are equally useful. Used or rental copies of either edition are available for vastly less than the ridiculously high new copy prices.)

Lectures

date	topic	slides	inked (A)	inked (B)	reading
30-Sep	Propositional logic				1.1-1.2 (7th), 1.1 (6th)
2-Oct	Digital circuits, more logic				1.1-1.3 (7th) 1.1-1.2 (6th)
5-Oct	Booelan algebra, combinatorial logic				12.1-12.3 (7th) 11.1-11.3 (6th)
7-Oct	Boolean algebra and circuits				12.1-12.3 (7th) 11.1-11.3 (6th)
9-Oct	Canonical forms, predicate logic				1.4-1.5 (7th) 1.3-1.4 (6th)
12-Oct	Predicate logic, logical inference				1.6-1.7 (7th) 1.5-1.7 (6th)
14-Oct	Proofs I				1.6-1.7 (7th) 1.5-1.7 (6th)
16-Oct	Proofs II				1.6-1.7 (7th) 1.5-1.7 (6th)
19-Oct	Set theory				2.1-2.3 (6th,7th)
21-Oct	Functions, modular arithmetic				4.1-4.2 (7th) 3.4-3.5 (6th)
23-Oct	Modular arithmetic and applications				4.1-4.3 (7th) 3.4-3.6 (6th)
26-Oct	Primes, GCD				4.3-4.4 (7th), 3.5-3.7 (6th)
28-Oct	Primes, GCD, fewer tangents				4.3-4.4 (7th), 3.5-3.7 (6th)
30-Oct	Coluing modular equations				4.4 E1 (7th) 2.7 4.1

Homeworks [Grading guidelines]:

Assignments will be submitted via Gradescope. An

- Why not use English?
 - Turn right here...

[When I was taking my driving test, the officer said "Turn left"; I asked into the first or second street? The officer replied you are failed because you asked for help!!]

Buffalo buffalo Buffalo buffalo buffalo Buffalo buffalo.

[The sentence means "Bison from Buffalo, that bison from Buffalo bully, themselves bully bison from Buffalo."]

- We saw her duck.
- "Language of Reasoning" like Java or English
 - Words, sentences, paragraphs, arguments...
 - Today is about words and sentences.

Logic as the "language of reasoning", will help us...

- Be more precise
- Be more concise
- Figure out what a statement means more quickly

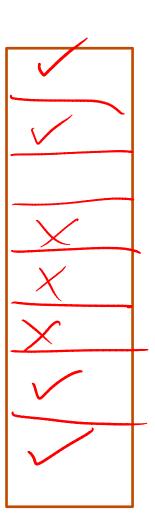

[please stop]

A **proposition** is a statement that

- has a truth value, and
- is "well-formed"

Consider these statements:

- 2 + 2 = 5
- The home page renders correctly in IE.
- This is the song that never ends.
- Turn in your homework on Wednesday.
- This statement is false.
- Akjsdf?
- The Washington State flag is red.
- Every positive even integer can be written as the sum of two primes.

- A proposition is a statement that
 - has a truth value, and
 - is "well-formed"
- Propositional variables: p, q, r, s, ...
- Truth values: T for true, F for false

"Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both."

[might as well just end it all now, Roger]

- What does this proposition mean?
- It seems to be built out of other, more basic propositions that are sitting inside it! What are they?

"Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both."

RElephant: "Roger is an orange elephant"

RTusks: "Roger has tusks"

RToenails: "Roger has toenails"

Negation (not) RElephant: Conjunction (and) $p \land q$ "Roger is an orange elephant" Disjunction (or) $p \lor q$ RTusks: "Roger has tusks" **Exclusive** or $p \oplus q$ RToenails: **Implication** $p \rightarrow q$ "Roger has toenails" **Biconditional** $p \leftrightarrow q$

"Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both."

 $\wedge \quad \times \quad \wedge \quad \vee \quad \wedge$

RElephant and (RToenails if RTusks) and (RToenails or RTusks or (RToenails and RTusks))

Rtusks -> RToenails

some truth tables

p	¬ p
7	F
7	T

р	q	p ∧ q
7	\rightarrow	+
1	7	T
TT	-)-	H
F	F	F

р	q	p∨q
T	T	T
T	H	T
F	1	T
F	F	F

р	q	p⊕q
+	۲	LL-
T	Ħ	T
F	7	7
F	F	F

"If p, then q" is a **promise**:

- Whenever p is true, then q is true
- Ask "has the promise been broken?"

p	q	$p \rightarrow q$

If it's raining, then I have my umbrella. Suppose it's not raining...

7	•	my um brilla then X
1t	I	have my unbroll it is not raining.

"I am a Pokémon master only if I have collected all 151 Pokémon"

Can we re-phrase this as "if p, then q"?

Implication:

- -p implies q
- whenever *p* is true *q* must be true
- if p then q
- -q if p
- -p is sufficient for q
- -p only if q

T T T T F	q
TFF	
 	
FET	

Implication:

$$p \rightarrow q$$

Converse:

 $a \setminus b$

Contrapositive:

 $\neg p \rightarrow \neg q$

Inverse:

How do these relate to each other?

If vaining then I have umbreller.

If I have umber then raining

If I don't have umbrelle then not raining

If not raining then not umbreller.

"Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both."

RElephant A (RToenails if RTusks) A (RToenails V RTusks V (RToenails A RTusks))

Define shorthand ...

p: RElephant

q: RTusks

r: RToenails

roger's sentence with a truth table

p	q	r	$q \rightarrow r$	$p \wedge (q \rightarrow r)$	$r \lor q$	$r \wedge q$	$(r \lor q) \lor (r \land q)$	$p \wedge (q \rightarrow r) \wedge (r \vee q \vee (r \wedge q))$
T	7	1	T	丁	+	T	T	T
T	T	ヿ	F	F	T	F	T	F
T	Т	1,	۲.	T	T	F	T	T
7	7	7	+	T	L	F	Т	F
F	+	7	+	L	-(-	+	- (-	, L
F	1	Ŧ	F	, L	۲	F	+	. 4
F	F	T	+	F	1	F	T	F
F	F	F	T	F	F	F	F	F

Shorthand:

p: RElephant

q: RTusks

r: RToenails

A fruit is an apple only if it is either red or green and a fruit is not red and green.

p: "Fruit is an apple"

q: "Fruit is red"

r: "Fruit is green"

A fruit is an apple only if it is either red or green and a fruit is not red and green.

(FApple **only if (**FGreen **xor** FRed**)) and (not (**FGreen **and** FRed))

(FApple \rightarrow (FGreen \oplus FRed)) \land (\neg (FGreen \land Fred)) p: FApple q: FGreen r: FRed

$$(P \rightarrow (q \oplus r)) \wedge (\neg (q \wedge r))$$

Fruit Sentence with a truth table

p	\boldsymbol{q}	r	$q \oplus r$	$p \rightarrow (q \oplus r)$	$q \wedge r$	$\neg (q \land r)$	$(\boldsymbol{p} \to (\boldsymbol{q} \oplus \mathbf{r})) \land (\neg(\boldsymbol{q} \land \boldsymbol{r}))$
T	Т	T	F	F	۲	H	F
