

Autumn 2015

## Lecture 1: Propositional Logic

Overload Request Link:

<http://tinyurl.com/p5vs5xb>

## We will study the **theory** needed for CSE.

### Logic:

How can we describe ideas and arguments **precisely**?

### Formal proofs:

Can we prove that we're right? [to ourselves? to others?]

### Number theory:

How do we keep data **secure**? [really? we need to justify numbers?]

### Relations/Relational Algebra:

How do we store information?

How do we reason about the effects of connectivity?

### Finite state machines:

How do we design hardware and software? [state!]

### Turing machines:

What is computation? [the universe? superheroes?]

Are there problems computers **can't** solve?

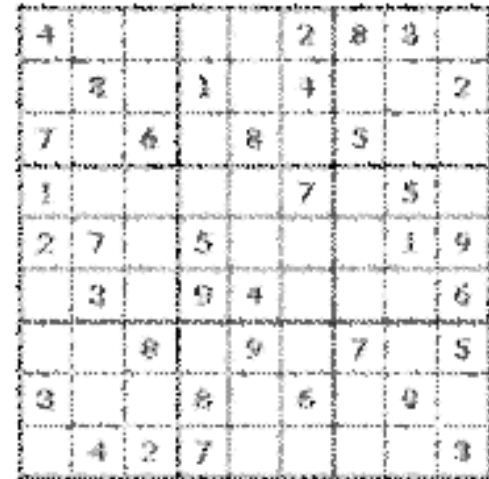

## The computational perspective.

### Example: Sudoku

Given *one*, solve by hand.

Given *most*, solve with a program.

Given *any*, solve with computer science.

|   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|
| 4 |   |   |   | 2 | 8 | 3 |   |   |
|   | 2 |   | 1 | 4 |   |   |   | 2 |
| 7 |   | 6 |   | 8 |   | 5 |   |   |
| 1 |   |   |   | 7 |   |   | 5 |   |
| 2 | 7 |   | 5 |   |   |   | 1 | 9 |
|   | 3 |   | 9 | 4 |   |   |   | 6 |
|   |   | 8 |   | 9 |   | 7 |   | 5 |
| 3 |   |   | 8 |   | 6 |   | 9 |   |
|   | 4 | 2 | 7 |   |   |   |   | 3 |

[ given one, by hand  
given most, with a program  
... computer science ]

- Tools for reasoning about difficult problems
- Tools for communicating ideas, methods, objectives
- Fundamental structures for computer science

[ like, uhh, smart stuff ]

## Prof. Oveis Gharan

CSE 636

Section A  
MWF 9:30-10:20 in CMU 120  
Office hours MW 10:30-11:30

## Prof. Lee

CSE 640

Section B  
MWF 1:30-2:20 in MGH 241  
Office hours MW 2:30-3:30

We will each sometimes teach both sections.

**The person who teaches is the one holding office hours after class.**

**You can go to any office hours any time.**

**Teaching assistants:**

[office hours TBD soon]

Sam Castle      Jiechen Chen  
Rebecca Leslie   Evan McCarty  
Tim Oleskiw      Spencer Peters  
Robert Weber     Ian Zhu

[cse311-staff@cs](mailto:cse311-staff@cs)

**Quiz Sections:**

Thursdays

**(Optional) Book:**

Rosen  
Discrete Mathematics  
**6<sup>th</sup> or 7<sup>th</sup> edition**  
**Can buy online for ~\$50**

**Homework:**

**Due Fridays on Gradescope**

Write up individually

First homework out this Friday (Oct 2)

**Exams:**

Midterm: Monday, Nov. 9, in class

Final: Monday, Dec. 14

**Grading (roughly):**

50% homework

35% final exam

15% midterm

All course information at <http://www.cs.washington.edu/311>.

# CSE 311: Foundations of Computing I

Autumn, 2015

**James R. Lee**

Section B: MWF 1:30-2:20, [MGH 241](#)  
Office hours: MW 2:30-3:30, CSE 640

**Shayan Oveis Gharan**

Section A: MWF 9:30-10:20, [CMU 120](#)  
Office hours: MW 10:30-11:30, CSE 636

**Email and discussion:**

Class email list: [multi\\_cse311a\\_aul5](#) [[archives](#)]

Please send any e-mail about the course to [cse311-staff@cs.cmu.edu](mailto:cse311-staff@cs.cmu.edu).

**Discussion board** (moderated by TBA)

Use this board to discuss the content of the course. That includes everything **except** the solutions to current homework problems. Feel free to discuss homeworks and exams from past incarnations of the course, and any confusion over topics discussed in class. It is also acceptable to ask for *clarifications* about the statement of homework problems, but not about their solutions.

**Textbook:**

There is no required text for the course. Some lectures will have associated reading material linked below. Over the first 6 weeks or so, the following textbook can be a useful companion: Rosen, *Discrete Mathematics and Its Applications*, McGraw-Hill. (The 6th or 7th editions of the text are equally useful. Used or rental copies of either edition are available for vastly less than the ridiculously high new copy prices.)

**Lectures**

| date   | topic                                | slides | inked (A) | inked (B) | reading                         |
|--------|--------------------------------------|--------|-----------|-----------|---------------------------------|
| 30-Sep | Propositional logic                  |        |           |           | 11-1.2 (7th), 1.1 (6th)         |
| 2-Oct  | Digital circuits, more logic         |        |           |           | 11-1.3 (7th) 1.1-1.2 (6th)      |
| 5-Oct  | Boolean algebra, combinatorial logic |        |           |           | 12.1-12.3 (7th) 11.1-11.3 (6th) |
| 7-Oct  | Boolean algebra and circuits         |        |           |           | 12.1-12.3 (7th) 11.1-11.3 (6th) |
| 9-Oct  | Canonical forms, predicate logic     |        |           |           | 1.4-1.5 (7th) 1.3-1.4 (6th)     |
| 12-Oct | Predicate logic, logical inference   |        |           |           | 1.6-1.7 (7th) 1.5-1.7 (6th)     |
| 14-Oct | Proofs I                             |        |           |           | 1.6-1.7 (7th) 1.5-1.7 (6th)     |
| 16-Oct | Proofs II                            |        |           |           | 1.6-1.7 (7th) 1.5-1.7 (6th)     |
| 19-Oct | Set theory                           |        |           |           | 2.1-2.3 (6th,7th)               |
| 21-Oct | Functions, modular arithmetic        |        |           |           | 4.1-4.2 (7th) 3.4-3.5 (6th)     |
| 23-Oct | Modular arithmetic and applications  |        |           |           | 4.1-4.3 (7th) 3.4-3.6 (6th)     |
| 26-Oct | Primes, GCD                          |        |           |           | 4.3-4.4 (7th), 3.5-3.7 (6th)    |
| 28-Oct | Primes, GCD, fewer tangents          |        |           |           | 4.3-4.4 (7th), 3.5-3.7 (6th)    |
| 30-Oct | Solving modular equations            |        |           |           | 4.4-5.1 (7th), 3.7-4.1          |

**Homeworks** [[Grading guidelines](#)]:

Assignments will be submitted via [Gradescope](#). An

- Why not use English?

- Turn right here...
- Buffalo buffalo Buffalo buffalo buffalo buffalo Buffalo buffalo.

[The sentence means "Bison from Buffalo, that bison from Buffalo bully, themselves bully bison from Buffalo."]

- We saw her duck.

- “Language of Reasoning” like Java or English

- Words, sentences, paragraphs, arguments...
- Today is about **words** and **sentences**.

Logic as the “language of reasoning”, will help us...

- Be more **precise**
- Be more **concise**
- Figure out what a statement means more **quickly**

[ please stop ]

A **proposition** is a statement that

- has a truth value, and
- is “well-formed”

["If I were to ask you out, would your answer to that question be the same as your answer to this one?"]

**Consider** these statements:

- $2 + 2 = 5$
- The home page renders correctly in IE.
- This is the song that never ends.
- Turn in your homework on Wednesday.
- This statement is false.
- Akjsdf? [hey, I akjsdf you a question]
- The Washington State flag is red.
- Every positive even integer can be written as the sum of two primes.

- 
- A **proposition** is a statement that
    - has a truth value, and
    - is “well-formed”
  - Propositional variables:  $p, q, r, s, \dots$
  - Truth values: **T** for **true**, **F** for **false**

“Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both.”

[might as well just end it all now, Roger]

- What does this proposition mean?
- It seems to be built out of other, more basic propositions that are sitting inside it! What are they?

“Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both.”

RElephant : “Roger is an orange elephant”

RTusks : “Roger has tusks”

RToenails : “Roger has toenails”

- Negation (not)  $\neg p$
  - Conjunction (and)  $p \wedge q$
  - Disjunction (or)  $p \vee q$
  - Exclusive or  $p \oplus q$
  - Implication  $p \rightarrow q$
  - Biconditional  $p \leftrightarrow q$
- RElephant :  
"Roger is an orange elephant"
- RTusks :  
"Roger has tusks"
- RToenails :  
"Roger has toenails"

"Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both."

RElephant **and** (RToenails **if** RTusks) **and** (RToenails **or** RTusks **or** (RToenails **and** RTusks))

| <b>p</b> | <b><math>\neg p</math></b> |
|----------|----------------------------|
|          |                            |
|          |                            |

| <b>p</b> | <b>q</b> | <b><math>p \wedge q</math></b> |
|----------|----------|--------------------------------|
|          |          |                                |
|          |          |                                |
|          |          |                                |
|          |          |                                |

| <b>p</b> | <b>q</b> | <b><math>p \vee q</math></b> |
|----------|----------|------------------------------|
|          |          |                              |
|          |          |                              |
|          |          |                              |
|          |          |                              |

| <b>p</b> | <b>q</b> | <b><math>p \oplus q</math></b> |
|----------|----------|--------------------------------|
|          |          |                                |
|          |          |                                |
|          |          |                                |
|          |          |                                |

$$p \rightarrow q$$

---

“If  $p$ , then  $q$ ” is a **promise**:

- Whenever  $p$  is true, then  $q$  is true
- Ask “has the promise been broken?”

| $p$ | $q$ | $p \rightarrow q$ |
|-----|-----|-------------------|
|     |     |                   |
|     |     |                   |
|     |     |                   |
|     |     |                   |

*If it's raining, then I have my umbrella.*

*Suppose it's not raining...*

$$p \rightarrow q$$

---

*"I am a Pokémon master only if I have collected all 151 Pokémon."*

Can we re-phrase this as "if  $p$ , then  $q$ " ?

## Implication:

- $p$  implies  $q$
- whenever  $p$  is true  $q$  must be true
- if  $p$  then  $q$
- $q$  if  $p$
- $p$  is sufficient for  $q$
- $p$  only if  $q$

| $p$ | $q$ | $p \rightarrow q$ |
|-----|-----|-------------------|
|     |     |                   |
|     |     |                   |
|     |     |                   |
|     |     |                   |

- Implication:  $p \rightarrow q$
- Converse:  $q \rightarrow p$
- Contrapositive:  $\neg q \rightarrow \neg p$
- Inverse:  $\neg p \rightarrow \neg q$

How do these relate to each other?

“Roger is an orange elephant who has toenails if he has tusks, and has toenails, tusks, or both.”

$\text{RElephant} \wedge (\text{RToenails} \text{ if } \text{RTusks}) \wedge (\text{RToenails} \vee \text{RTusks} \vee (\text{RToenails} \wedge \text{RTusks}))$

Define shorthand ...

$p : \text{RElephant}$

$q : \text{RTusks}$

$r : \text{RToenails}$

# roger's sentence with a truth table

---

| $p$ | $q$ | $r$ | $q \rightarrow r$ | $p \wedge (q \rightarrow r)$ | $r \vee q$ | $r \wedge q$ | $(r \vee q) \vee (r \wedge q)$ | $p \wedge (q \rightarrow r) \wedge (r \vee q \vee (r \wedge q))$ |
|-----|-----|-----|-------------------|------------------------------|------------|--------------|--------------------------------|--|
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |
|     |     |     |                   |                              |            |              |                                |  |

Shorthand:

$p$  : RElephant

$q$  : RTusks

$r$  : RToenails

Roger is only orange if whenever he either has tusks or toenails, he doesn't have tusks and he is an orange elephant."

$p$  : "Roger is an orange elephant"

$q$  : "Roger has tusks"

$r$  : "Roger has toenails"

Roger is only orange if whenever he either has tusks or toenails, he doesn't have tusks and he is an orange elephant."

(RElephant **only if** (whenever (RTusks xor RToenails) **then not** RTusks)) **and** RElephant

(RElephant  $\rightarrow$  (whenever (RTusks  $\oplus$  RToenails) **then**  $\neg$  RTusks))  $\wedge$  RElephant

$p$  : RElephant  
 $q$  : RTusks  
 $r$  : RToenails

## Roger's second sentence with a truth table

---

| $p$ | $q$ | $r$ | $q \oplus r$ | $\neg q$ | $((q \oplus r) \rightarrow \neg q)$ | $p \rightarrow ((q \oplus r) \rightarrow \neg q)$ | $(p \rightarrow ((q \oplus r) \rightarrow \neg q)) \wedge p$ |
|-----|-----|-----|--------------|----------|-------------------------------------|---|--|
| T   | T   | T   |              |          |                                     |   |  |
| T   | T   | F   |              |          |                                     |   |  |
| T   | F   | T   |              |          |                                     |   |  |
| T   | F   | F   |              |          |                                     |   |  |
| F   | T   | T   |              |          |                                     |   |  |
| F   | T   | F   |              |          |                                     |   |  |
| F   | F   | T   |              |          |                                     |   |  |
| F   | F   | F   |              |          |                                     |   |  |

- $p$  iff  $q$
- $p$  is equivalent to  $q$
- $p$  implies  $q$  and  $q$  implies  $p$

| $p$ | $q$ | $p \leftrightarrow q$ |
|-----|-----|-----------------------|
|     |     |                       |
|     |     |                       |
|     |     |                       |
|     |     |                       |
