

Course web: <http://www.cs.washington.edu/311>

Office hours: 12 office hours each week
Me/James: MW 10:30-11:30/2:30-3:30pm or by appointment

TA Section: Start next week

Call me: Shayan

Don't: Actually call me.

Homework #1: Will be posted today, due next Friday by midnight (Oct 9th)
Gradescope! (stay tuned)

Extra credit: Not required to get a 4.0.
Counts separately.
In total, may raise grade by ~0.1

Don't be shy (raise your hand in the back)!
Do space out your participation.

If you are not CSE yet, please do well!

p	$\neg p$
T	F
F	T

NOT

p	q	$p \wedge q$
T	T	T
T	F	F
F	T	F
F	F	F

AND

p	q	$p \vee q$
T	T	T
T	F	T
F	T	T
F	F	F

OR

p	q	$p \oplus q$
T	T	F
T	F	T
F	T	T
F	F	F

XOR

$$p \rightarrow q$$

- “If p , then q ” is a **promise**:
 - Whenever p is true, then q is true
 - Ask “has the promise been broken”

p	q	$p \rightarrow q$
F	F	T
F	T	T
T	F	F
T	T	T

If it's raining, then I have my umbrella.

Same

I have my umbrella if it is raining
It is raining only if I have my umbrella.

- Implication: $p \rightarrow q$
- Converse: $q \rightarrow p$
- Contrapositive: $\neg q \rightarrow \neg p$
- Inverse: $\neg p \rightarrow \neg q$

How do these relate to each other?

How to see this?

p	q	$p \rightarrow q$	$\sim p$	$\sim q$	$\sim q \rightarrow \sim p$
T	T	T	F	F	T
T	F	F	F	T	F
F	T	T	T	F	T
F	F	T	T	T	T

$$p \leftrightarrow q$$

- p iff q
- p is equivalent to q
- p implies q and q implies p

$$\begin{array}{l} p \text{ iff } q \\ p \text{ only if } q \end{array} \quad \left. \begin{array}{l} q \rightarrow p \\ p \rightarrow q \end{array} \right\} \rightarrow p \leftrightarrow q$$

p	q	$p \leftrightarrow q$
T	T	T
T	F	F
F	T	F
F	F	T

The Fruit Sentence

p	q	r	$q \oplus r$	$p \rightarrow (q \oplus r)$	$q \wedge r$	$\neg(q \wedge r)$	$(p \rightarrow (q \oplus r)) \wedge (\neg(q \wedge r))$
T	T	T					
T	T	F					
T	F	T					
T	F	F					
F	T	T					
F	T	F					
F	F	T					
F	F	F					

A fruit is an apple only if it is either red or green and a fruit is not red and green.

Spring 2015

Lecture 2: Digital circuits & more logic

Computing with logic

- **T** corresponds to 1 or “high” voltage
- **F** corresponds to 0 or “low” voltage

Gates:

- Take inputs and produce outputs (functions)
- Several kinds of gates
- Correspond to propositional connectives

AND Connective

vs.

AND Gate

 $p \wedge q$

p	q	$p \wedge q$
T	T	T
T	F	F
F	T	F
F	F	F

p	q	OUT
1	1	1
1	0	0
0	1	0
0	0	0

“block looks like D of AND”

OR Connective

vs.

OR Gate

 $p \vee q$

p	q	$p \vee q$
T	T	T
T	F	T
F	T	T
F	F	F

p	q	OUT
1	1	1
1	0	1
0	1	1
0	0	0

“arrowhead block looks like \vee ”

NOT Connective

vs.

NOT Gate (Also called
inverter) $\neg p$

p	$\neg p$
T	F
F	T

p	OUT
1	0
0	1

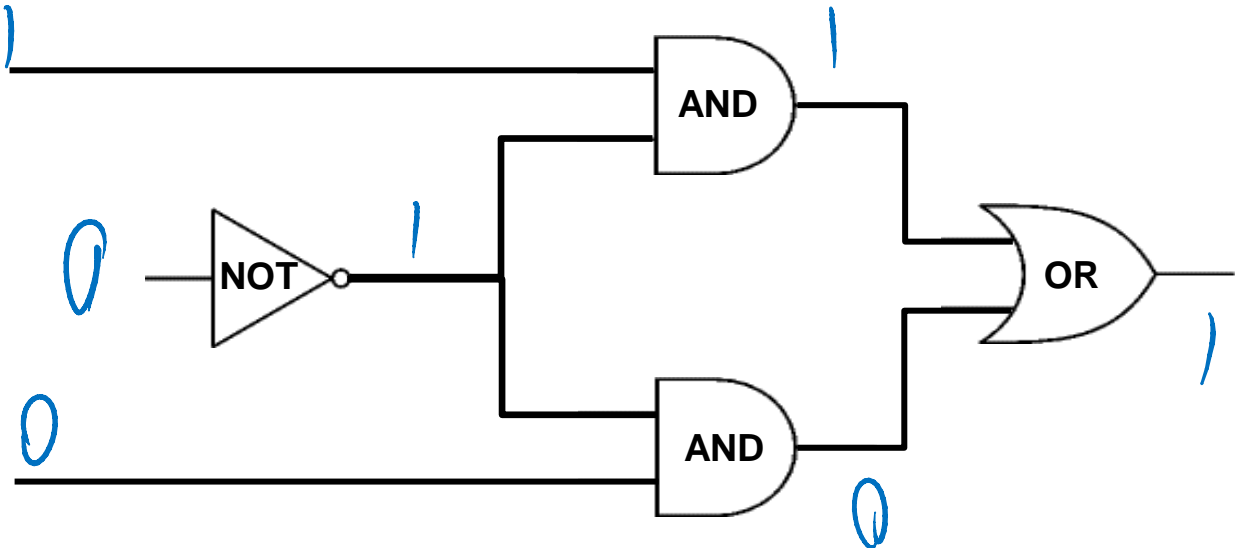

blobs are okay

You can write gates using blobs instead of shapes.

Values get sent along wires connecting gates

Wires can send one value to multiple gates!

Terminology: A compound proposition is a...

- *Tautology* if it is always true
- *Contradiction* if it is always false
- *Contingency* if it can be either true or false

Classify!

$$p \vee \neg p$$

Tautology

$$p \oplus p$$

Contradict

$$(p \rightarrow q) \wedge p$$

Contingency

$$\underbrace{(p \wedge q)}_T \vee \underbrace{(p \wedge \neg q)}_T \vee \underbrace{(\neg p \wedge q)}_F \vee \underbrace{(\neg p \wedge \neg q)}_F$$

Taut.

Q is Tautology
 $\neg Q$ is Contradic

Terminology: A compound proposition is a...

- *Tautology* if it is always true
- *Contradiction* if it is always false
- *Contingency* if it can be either true or false

Classify!

$$((p \wedge q \wedge r) \vee (\neg p \wedge q \wedge \neg r)) \wedge ((p \vee q \vee \neg s) \vee (p \wedge q \wedge s))$$

P! = NP

A and B are *logically equivalent* if and only if

$A \leftrightarrow B$ is a tautology

i.e. A and B have the same truth table

The notation $A \equiv B$ denotes A and B are logically equivalent.

Example: $p \equiv \neg\neg p$

p	$\neg p$	$\neg\neg p$	$p \leftrightarrow \neg\neg p$
T	F	T	T
F	T	F	T

$A \equiv B$ says that **two** propositions A and B *always mean the same thing*.

$A \leftrightarrow B$ is a **single** proposition that may be true or false depending on the truth values of the variables in A and B .

but $A \equiv B$ and $(A \leftrightarrow B) \equiv \mathbf{T}$ have the same meaning.

Note: Why write $A \equiv B$ and not $A=B$?

[We use $A=B$ to say that A and B are precisely the same proposition (same sequence of symbols)]

$$\begin{aligned} p &= p \\ p &\neq \neg\neg p \\ p &\equiv \neg\neg p \end{aligned}$$

$$\neg(p \wedge q) \equiv \neg p \vee \neg q$$

$$\neg(p \vee q) \equiv \neg p \wedge \neg q$$

My code compiles or there is a bug.

[let's negate it]

My code does not compile and there is no bug

Write NAND using NOT and OR:

"Always wear breathable fabrics when you get your picture taken."

Verify: $\neg(p \wedge q) \equiv (\neg p \vee \neg q)$

p	q	$\neg p$	$\neg q$	$\neg p \vee \neg q$	$p \wedge q$	$\neg(p \wedge q)$	$\neg(p \wedge q) \leftrightarrow (\neg p \vee \neg q)$
T	T	F	F	F	T	F	T
T	F	F	T	T	F	T	T
F	T	T	F	T	F	T	T
F	F	T	T	T	F	T	T

$$\neg (p \wedge q) \equiv \neg p \vee \neg q$$

$$\neg (p \vee q) \equiv \neg p \wedge \neg q$$

```
if !(front != null && value > front.data)
    front = new ListNode(value, front);
else {
    ListNode current = front;
    while !(current.next == null || current.next.data >= value)
        current = current.next;
    current.next = new ListNode(value, current.next);
}
```

IF Case: $front == null$ or $value \leq front.data$

while stops: $current.next == null$ or $current.next.data > value$
Repeated calls give sorted linked list

$$(p \rightarrow q) \equiv (\neg p \vee q)$$

p	q	$p \rightarrow q$	$\neg p$	$\neg p \vee q$	$(p \rightarrow q) \leftrightarrow (\neg p \vee q)$
T	T	T	F	T	T
T	F	F	F	F	T
F	T	T	T	T	T
F	F	T	T	T	T

If raining then I have my umbrella
It does not rain or I have my umbrella.

Describe an algorithm for computing if two logical expressions/circuits are equivalent.

2^k

What is the run time of the algorithm?

- $x + y = y + x$ (commutativity)
- $x \cdot (y + z) = x \cdot y + x \cdot z$ (distributivity)
- $(x + y) + z = x + (y + z)$ (associativity)

Logic has similar algebraic properties

- $x + y = y + x$ (commutativity)
 - $p \vee q \equiv q \vee p$
 - $p \wedge q \equiv q \wedge p$
- $x \cdot (y + z) = x \cdot y + x \cdot z$ (distributivity)
 - $p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$
 - $p \vee (q \wedge r) \equiv (p \vee q) \wedge (p \vee r)$
- $(x + y) + z = x + (y + z)$ (associativity)
 - $(p \vee q) \vee r \equiv p \vee (q \vee r)$
 - $(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$

- **Identity**

- $p \wedge \text{T} \equiv p$

- $p \vee \text{F} \equiv p$

- **Domination**

- $p \vee \text{T} \equiv \text{T}$

- $p \wedge \text{F} \equiv \text{F}$

- **Idempotent**

- $p \vee p \equiv p$

- $p \wedge p \equiv p$

- **Commutative**

- $p \vee q \equiv q \vee p$

- $p \wedge q \equiv q \wedge p$

You will always get this list.

- **Associative**

- $(p \vee q) \vee r \equiv p \vee (q \vee r)$

- $(p \wedge q) \wedge r \equiv p \wedge (q \wedge r)$

- **Distributive**

- $p \wedge (q \vee r) \equiv (p \wedge q) \vee (p \wedge r)$

- $p \vee (q \wedge r) \equiv (p \vee q) \wedge (p \vee r)$

- **Absorption**

- $p \vee (p \wedge q) \equiv p$

- $p \wedge (p \vee q) \equiv p$

- **Negation**

- $p \vee \neg p \equiv \text{T}$

- $p \wedge \neg p \equiv \text{F}$
