

Fall 2015

Lecture 18:

Recursively defined sets and structural induction

## Four weeks left: What happens now?

The class speeds up a bit.

Homework problems get more conceptual.

We will cover:

- Recursively defined sets and functions
- Structural induction
- Regular expressions and context free grammars
- Relations and graphs
- Finite state machines and automata
- Turing machines and undecidability

Will give exams back at the end of class.

Regrade requests: Each problem belongs to a TA

Problem 1	Robbie
Problem 2	Becky / Tim
Problem 3	Jiechen
Problem 4	Sam
Problem 5	Ian
Problem 6	Evan

You have to go see the relevant grader.

As usual:

**Make sure you understand the problem and your solution.**

stressed?

---

## Recursive definition

- Basis step:  $0 \in S$
- Recursive step: if  $x \in S$ , then  $x + 2 \in S$
- Exclusion rule: Every element in  $S$  follows from basis steps and a finite number of recursive steps

$$S = \text{positive even numbers}$$
$$= \{0, 2, 4, \dots\}$$

# $3^0 = 1, 3^5 = 3 \cdot 3 \cdot 3 \cdot 3 \cdot 3$ recursive definition of sets

---

**Basis:**  $6 \in S; 15 \in S;$

**Recursive:** if  $x, y \in S$ , then  $x + y \in S;$

$$S = \{ 6a + 15b : a, b \text{ non-negative integers} \}$$

**Basis:**  $[1, 1, 0] \in S, [0, 1, 1] \in S;$

**Recursive:**

if  $[x, y, z] \in S, \alpha \in \mathbb{R}$ , then  $[\alpha x, \alpha y, \alpha z] \in S$

if  $[x_1, y_1, z_1], [x_2, y_2, z_2] \in S$

then  $[x_1 + x_2, y_1 + y_2, z_1 + z_2] \in S$

**Powers of 3:**  $\text{span} \{ [1, 1, 0], [0, 1, 1] \} \subseteq \mathbb{R}^3$

✓ **Basis:**  $1 \in S$  } maybe  $x \in S \Rightarrow \frac{x}{3} \in S$

**Recursive:**  $x \in S \Rightarrow 3x \in S$  }

# recursive definitions of sets: general form

---

## Recursive definition

- *Basis step*: Some specific elements are in  $S$
- *Recursive step*: Given some existing named elements in  $S$  some new objects constructed from these named elements are also in  $S$ .
- *Exclusion rule*: Every element in  $S$  follows from basis steps and a finite number of recursive steps

$$w, w' \in \Sigma^*$$

strings

- An *alphabet*  $\Sigma$  is any finite set of characters.

e.g.  $\Sigma = \{0,1\}$  or  $\Sigma = \{A, B, C, \dots X, Y, Z\}$  or

$$\Sigma =$$

Check  
Wikipedia

- The set  $\Sigma^*$  of *strings* over the alphabet  $\Sigma$  is defined by
  - **Basis:**  $\epsilon \in \Sigma^*$  ( $\epsilon$  is the empty string) ( $\lambda$  also used)
  - **Recursive:** if  $w \in \Sigma^*$ ,  $a \in \Sigma$ , then  $wa \in \Sigma^*$

$$\Sigma = \{0,1\} \quad \Sigma^* = \{\epsilon, 0, 1, 00, 01, 10, 11, \dots\}$$

Palindromes are strings that are the same backwards and forwards.

$\Sigma$  Some finite alphabet

## **Basis:**

$\epsilon$  is a palindrome and any  $a \in \Sigma$  is a palindrome

## **Recursive step:**

If  $p$  is a palindrome then  $apa$  is a palindrome for every  $a \in \Sigma$ .

$\Sigma = \{0, 1\}$   $x \in S \Rightarrow$  if  $(y \neq \epsilon)$   $y1 \in S$   
 binary strings such that...

First digit cannot be a 1.

Basis:  $\epsilon \in S$

Recursive:  $x \in S \Rightarrow x0 \in S$

✓ (OK)  $y \in S$  and  $y \neq \epsilon$  then  $y1 \in S$

Basis:  $0 \in S$  \*

Recursive:  $x \in S \Rightarrow 0x \in S$   
 $x \in S \Rightarrow x1 \in S$

$x \in S \Rightarrow \epsilon \in S$

\* No occurrence of the substring 11.

Basis:  $\epsilon \in S, 1 \in S$

Rec:  $x \in S \Rightarrow x0 \in S$   
 $x \in S \Rightarrow x01 \in S$

← prove it works?

# function definitions on recursively defined sets

---

## Length:

$$\text{len}(\varepsilon) = 0;$$

$$\text{len}(wa) = 1 + \text{len}(w); \text{ for } w \in \Sigma^*, a \in \Sigma$$

## Reversal:

$$\varepsilon^R = \varepsilon$$

$$(wa)^R = aw^R \text{ for } w \in \Sigma^*, a \in \Sigma$$

$$(011)^R = 1(01)^R \\ = 110^R = 110 \varepsilon^R \\ = 110.$$

## Concatenation:

$$x \cdot \varepsilon = x \text{ for } x \in \Sigma^*$$

$$x \cdot wa = (x \cdot w)a \text{ for } x, w \in \Sigma^*, a \in \Sigma$$

$$(xa)^R = ax^R$$

$$(x \cdot y)^R = y^R \cdot x^R$$

$$x \cdot (011) = (x \cdot 01)1 = (x \cdot \varepsilon)11 \\ = (x \cdot \varepsilon)011 = x011.$$

# function definitions on recursively defined sets

---

## Number of vowels in a string:

$$\Sigma = \{a, b, c, \dots, z\}$$

$$\mathcal{V} = \{a, e, i, o, u\}$$

$$w \in \Sigma^+$$

$$wa \in \Sigma^+$$

for  $a \in \Sigma$

$$NV(x) = \# \text{ vowels in } x$$

$$NV(\epsilon) = 0$$

$$NV(wa) = \begin{cases} 1 + NV(w) & \text{if } a \in \mathcal{V} \\ NV(w) & \text{if } a \notin \mathcal{V} \end{cases}$$

# rooted binary trees

---

- **Basis:**  $\bullet$  is a rooted binary tree
- **Recursive step:**

If  $T_1$  and  $T_2$  are rooted binary trees,

# rooted binary trees

---

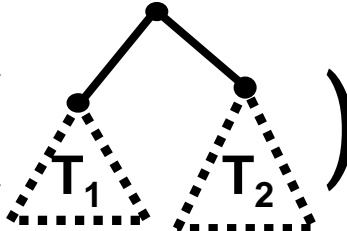

- **Basis:**  $T$  is a rooted binary tree
- **Recursive step:**

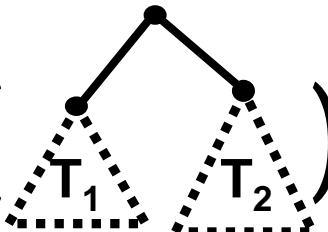

# defining a function on rooted binary trees

---

- $\text{size}(\bullet) = 1$

- $\text{size} \left( \begin{array}{c} \bullet \\ \swarrow \quad \searrow \\ \bullet \quad \bullet \\ \text{---} \text{---} \text{---} \text{---} \\ \text{---} \text{---} \text{---} \text{---} \\ \text{---} \text{---} \text{---} \text{---} \end{array} \right) = 1 + \text{size}(T_1) + \text{size}(T_2)$ 

- $\text{height}(\bullet) = 0$

- $\text{height} \left( \begin{array}{c} \bullet \\ \swarrow \quad \searrow \\ \bullet \quad \bullet \\ \text{---} \text{---} \text{---} \text{---} \\ \text{---} \text{---} \text{---} \text{---} \\ \text{---} \text{---} \text{---} \text{---} \end{array} \right) = 1 + \max\{\text{height}(T_1), \text{height}(T_2)\}$ 

How to prove  $\forall x \in S, P(x)$  is true:

**Base Case:** Show that  $P(u)$  is true for all specific elements  $u$  of  $S$  mentioned in the *Basis step*

**Inductive Hypothesis:** Assume that  $P$  is true for some arbitrary values of *each* of the existing named elements mentioned in the *Recursive step*

**Inductive Step:** Prove that  $P(w)$  holds for each of the new elements  $w$  constructed in the *Recursive step* using the named elements mentioned in the Inductive Hypothesis

**Conclude** that  $\forall x \in S, P(x)$

# structural induction

How to prove  $\forall x \in S, P(x)$  is true:

**Base Case:** Show that  $P(u)$  is true for all specific elements  $u$  of  $S$  mentioned in the *Basis step*

**Inductive Hypothesis:** Assume  $P(x)$  is true for arbitrary values of  $x$  mentioned in the *Basis step*

**Inductive Step:** Prove  $P(w)$  for elements  $w$  constructed from named elements  $x$  and  $y$

**Conclude** that  $\forall x \in S, P(x)$  is true

- **Basis:**  $T$  is a rooted binary tree
- **Recursive step:**

# structural induction vs. ordinary induction

---

Ordinary induction is a special case of structural induction:

Recursive definition of  $\mathbb{N}$

**Basis:**  $0 \in \mathbb{N}$

**Recursive step:** If  $k \in \mathbb{N}$  then  $k + 1 \in \mathbb{N}$

Structural induction follows from ordinary induction:

Let  $Q(n)$  be true iff for all  $x \in S$  that take  $n$  recursive steps to be constructed,  $P(x)$  is true.

## using structural induction

---

Let  $S$  be given by:

- **Basis:**  $6 \in S$ ;  $15 \in S$ ;
- **Recursive:** if  $x, y \in S$  then  $x + y \in S$ .

**Claim:** Every element of  $S$  is divisible by 3.
