

## cse 311: foundations of computing

Spring 2015

Lecture 18:

## Recursively defined sets and structural induction

## administrative

Four weeks left: What happens now?

The class speeds up a bit.

Homework problems get more conceptual.

We will cover:

- Recursively defined sets and functions
- Structural induction
- Regular expressions and context free grammars
- Relations and graphs
- Finite state machines and automata
- Turing machines and undecidability

## recursive definition of sets

## Recursive definition

- **Basis step:**  $0 \in S$
- **Recursive step:** if  $x \in S$ , then  $x + 2 \in S$
- **Exclusion rule:** Every element in  $S$  follows from basis steps and a finite number of recursive steps

## recursive definition of sets

**Basis:**  $6 \in S; 15 \in S;$ **Recursive:** if  $x, y \in S$ , then  $x + y \in S$ ;**Basis:**  $[1, 1, 0] \in S, [0, 1, 1] \in S;$ **Recursive:**

if  $[x, y, z] \in S, \alpha \in \mathbb{R}$ , then  $[\alpha x, \alpha y, \alpha z] \in S$   
 if  $[x_1, y_1, z_1], [x_2, y_2, z_2] \in S$   
 then  $[x_1 + x_2, y_1 + y_2, z_1 + z_2] \in S$

Powers of 3:

## recursive definitions of sets: general form

## Recursive definition

- **Basis step:** Some specific elements are in  $S$
- **Recursive step:** Given some existing named elements in  $S$  some new objects constructed from these named elements are also in  $S$ .
- **Exclusion rule:** Every element in  $S$  follows from basis steps and a finite number of recursive steps

## strings

- An **alphabet**  $\Sigma$  is any finite set of characters.

e.g.  $\Sigma = \{0, 1\}$  or  $\Sigma = \{A, B, C, \dots, X, Y, Z\}$  or
$$\Sigma =$$

1	26	51	76	101	126	151	176	201	226
2	27	52	77	102	127	152	177	202	227
3	28	53	78	103	128	153	178	203	228
4	29	54	79	104	129	154	179	204	229
5	30	55	80	105	130	155	180	205	230
6	31	56	81	106	131	156	181	206	231
7	32	57	82	107	132	157	182	207	232
8	33	58	83	108	133	158	183	208	233
9	34	59	84	109	134	159	184	209	234
10	35	60	85	110	135	160	185	210	235
11	36	61	86	111	136	161	186	211	236
12	37	62	87	112	137	162	187	212	237
13	38	63	88	113	138	163	188	213	238
14	39	64	89	114	139	164	189	214	239
15	40	65	90	115	140	165	190	215	240
16	41	66	91	116	141	166	191	216	241
17	42	67	92	117	142	167	192	217	242
18	43	68	93	118	143	168	193	218	243
19	44	69	94	119	144	169	194	219	244
20	45	70	95	120	145	170	195	220	245

- The set  $\Sigma^*$  of *strings* over the alphabet  $\Sigma$  is defined by

- **Basis:**  $\varepsilon \in \Sigma^*$  ( $\varepsilon$  is the empty string)
- **Recursive:** if  $w \in \Sigma^*, a \in \Sigma$ , then  $wa \in \Sigma^*$

### palindromes

Palindromes are strings that are the same backwards and forwards.

**Basis:**

$\varepsilon$  is a palindrome and any  $a \in \Sigma$  is a palindrome

**Recursive step:**

If  $p$  is a palindrome then  $apa$  is a palindrome for every  $a \in \Sigma$ .

### binary strings such that...

First digit cannot be a 1.

\* No occurrence of the substring 11.

### function definitions on recursively defined sets

**Length:**

$\text{len}(\varepsilon) = 0$ ;

$\text{len}(wa) = 1 + \text{len}(w)$ ; for  $w \in \Sigma^*$ ,  $a \in \Sigma$

**Reversal:**

$\varepsilon^R = \varepsilon$

$(wa)^R = aw^R$  for  $w \in \Sigma^*$ ,  $a \in \Sigma$

**Concatenation:**

$x \bullet \varepsilon = x$  for  $x \in \Sigma^*$

$x \bullet wa = (x \bullet w)a$  for  $x, w \in \Sigma^*$ ,  $a \in \Sigma$

### function definitions on recursively defined sets

**Number of vowels in a string:**

$\Sigma = \{a, b, c, \dots, z\}$

$\mathcal{V} = \{a, e, i, o, u\}$

### rooted binary trees

- **Basis:**  $\bullet$  is a rooted binary tree
- **Recursive step:**

If  $T_1$  and  $T_2$  are rooted binary trees,

### rooted binary trees

- **Basis:**  $\bullet$  is a rooted binary tree
- **Recursive step:**

If  $T_1$  and  $T_2$  are rooted binary trees,

### defining a function on rooted binary trees

- $\text{size}(\bullet) = 1$

- $\text{size} \left( \begin{array}{c} \diagup \quad \diagdown \\ \triangle_{T_1} \quad \triangle_{T_2} \end{array} \right) = 1 + \text{size}(T_1) + \text{size}(T_2)$

- $\text{height}(\bullet) = 0$

- $\text{height} \left( \begin{array}{c} \diagup \quad \diagdown \\ \triangle_{T_1} \quad \triangle_{T_2} \end{array} \right) = 1 + \max\{\text{height}(T_1), \text{height}(T_2)\}$

### structural induction

How to prove  $\forall x \in S, P(x)$  is true:

**Base Case:** Show that  $P(u)$  is true for all specific elements  $u$  of  $S$  mentioned in the *Basis step*

**Inductive Hypothesis:** Assume that  $P$  is true for some arbitrary values of *each* of the existing named elements mentioned in the *Recursive step*

**Inductive Step:** Prove that  $P(w)$  holds for each of the new elements  $w$  constructed in the *Recursive step* using the named elements mentioned in the Inductive Hypothesis

**Conclude** that  $\forall x \in S, P(x)$

### structural induction

How to prove  $\forall x \in S, P(x)$  is true:

**Base Case:** Show that  $P(u)$  is true for all specific elements  $u$  of  $S$  mentioned in the *Basis step*

**Inductive Hypothesis:** Assume that  $P$  is true for some arbitrary values of *each* of the existing named elements mentioned in the *Recursive step*

**Inductive Step:** Prove that  $P(w)$  holds for each of the new elements  $w$  constructed in the *Recursive step* using the named elements mentioned in the Inductive Hypothesis

**Conclude** that  $\forall x \in S, P(x)$

### structural induction vs. ordinary induction

Ordinary induction is a special case of structural induction:

Recursive definition of  $\mathbb{N}$

**Basis:**  $0 \in \mathbb{N}$

**Recursive step:** If  $k \in \mathbb{N}$  then  $k + 1 \in \mathbb{N}$

Structural induction follows from ordinary induction:

Let  $Q(n)$  be true iff for all  $x \in S$  that take  $n$  recursive steps to be constructed,  $P(x)$  is true.

### using structural induction

Let  $S$  be given by:

- **Basis:**  $6 \in S; 15 \in S;$
- **Recursive:** if  $x, y \in S$  then  $x + y \in S$ .

**Claim:** Every element of  $S$  is divisible by 3.
